Q U E E N.

M A D A M,

TH E condescension with which your Majesty has been pleased to permit your name to stand before the following History, may justly reconcile the author to his favourite study, and convince him, that whatever may be said by the professors of severer wisdom, the hours which he has bestowed upon Music have been neither dishonourably, nor unprofitably spent.

THE science of musical sounds, though it may have been depreciated, as appealing only to the ear, and

and affording nothing more than a momentary and fugitive delight, may be with justice considered as the art that unites corporal with intellectual pleasure, by a species of enjoyment which gratifies sense, without weakening reason; and which, therefore, the Great may cultivate without debasement, and the Good enjoy without depravation.

THOSE who have most diligently contemplated the state of man, have found it beset with vexations, which can neither be repelled by splendor, nor eluded by obscurity; to the necessity of combating these intrusions of discontent, the ministers of pleasure were indebted for that kind reception, which they have perhaps too indiscriminately obtained. Pleasure and innocence ought never to be separated; yet we seldom find them otherwise than at variance, except when Music brings them together.

To those who know that Music is among your Majesty's recreations, it is not necessary to display its purity, or assert its dignity. May it long amuse your leisure, not as a relief from evil, but as an augmentation of good; not as a diversion from care, but as a variation of felicity. Such, Madam, is my sincerest wish,

DEDICATION.

v

wish, in which I can however boast no peculiarity of reverence or zeal ; for the virtues of your Majesty are universally confessed ; and however the inhabitants of the British empire may differ in their opinions upon other questions, they all behold your excellencies with the same eye, and celebrate them with the same voice ; and to that name which one nation is echoing to another, nothing can be added by the respectful admiration, and humble gratitude of,

 admiration, and humble gratitude of,

M A D A M,

Your Majesty's

most obedient

and most devoted servant,

CHARLES BURNET.

P R E F A C E.

THE feeble beginnings of whatever afterwards becomes great, are interesting to mankind. To artists, therefore, and to real lovers of art, nothing relative to the object of their pleasure or employment is indifferent.

The love of lengthened tones and modulated sounds, different from those of speech, and regulated by a stated measure, seems a passion implanted in human nature throughout the globe; for we hear of no people, however wild and savage in other particulars, who have not music of some kind or other, with which we may suppose them to be greatly delighted, by their constant use of it upon occasions the most opposite: in the temple, and the theatre; at funerals, and at weddings; to give dignity and solemnity to festivals, and to excite mirth, cheerfulness, and activity, in the frolicsome dance. Music, indeed, like vegetation, flourishes differently in different climates; and in proportion to the culture and encouragement it receives; yet, to love such music as our ears are accustomed to, is an instinct so generally subsisting in our nature, that it appears less wonderful it should have been in the highest estimation at all times, and in every place, than that it should hitherto never have had its progressive improvements and revolutions deduced through a regular history, by any English writer.

Indeed,

Indeed, though time has spared us a few ancient histories of empires, republics, and individuals, yet no models of a *Musical History*, or of other arts and sciences, are come down to us, out of the many that antiquity produced. Plutarch's Dialogue on Music approaches the nearest to history; but though it abounds with particulars relative to the subject, it is so short and so defective, that it rather excites than gratifies curiosity.

Some of the writings of Aristotle and Aristoxenus that are lost, though they were not express histories of music, would, nevertheless, had they been preserved, have satisfied our doubts concerning several parts of ancient music, which are now left to conjecture.

“Aristotle, the disciple of Plato, says Plutarch, regarded melody as something noble, great, and divine.” Now, as this passage is not to be found in the remaining works of Aristotle, it is imagined that Plutarch took it either from his *Treatise on Music* (a), or the second book of his Poetics, where he treated of the Flute and Cithara, both which works are lost. And yet, Kircher, in his *Musurgia* (b), speaking of the ancient writers on Music, whose works he had consulted among the manuscripts in the Jesuit's College Library at Rome, names Aristotle; but I could find there nothing by that author relative to the subject, except his Acoustics (c), the work that was written expressly on Music, I sought in vain.

Almost all the ancient philosophers wrote treatises on Music, especially the Pythagoreans, Platonists, and Peripatetics, which

(a) Ὑπερ Μουσικῆς.

(b) Tom. i. p. 545

(c) Περὶ ἀκουστικῆς.

are now lost. Meursius, in his notes on Aristoxenus, among others, enumerates the following ancient writers on music, of whom we have nothing left but the names : Agenor, of Mytilene, mentioned by Aristoxenus (*d*), from whom sprung a sect of musicians called *Agenorians*; as from Eratocles, the *Erato-cleans*; from Epigonus, the *Epigonians*, and from Damon, who taught Socrates music, the *Damonians* (*e*).

But of all the ancient musical writers, the name of no one is come down to us, of whose works I was in greater want than those of the younger Dionysius Halicarnassensis, who flourished, according to Suidas, under the emperor Adrian, and who wrote twenty-six books of the *History of Musicians*, in which he celebrated not only the great performers on the Flute and Cithara, but those who had risen to eminence by every species of poetry. He was, likewise, author of five books, written in defence of Music, and chiefly in refutation of what is alleged against it in Plato's Republic. Aristides Quintilianus (*f*) has, also, endeavoured to soften the severity of some animadversions against Music in the writings of Cicero (*g*); but though time has spared the defence of this author, yet it does not indemnify us for the loss of that which Dionysius junior left behind him; as testimonies are still remaining of his having been a much more able writer than Arist. Quintilianus (*h*).

But though all the musical histories of the ancients are lost, yet almost every country in Europe that has cultivated the polite arts, has, since the revival of learning, produced a history

(*d*) *Lib. ii. p. 36.*

(*e*) The list of Greek writers on the subject of Music, whose works are lost, amounts in Fabricius to near thirty.

(*f*) *P. 69, et seq.*

(*g*) *In Politic.*

(*h*) *Vide Fabricium. Bib. Græc. lib. iii. p. 10.*

of Music, except our own. Italy can boast of two works under that title; one written in the latter end of the last century by Bontempi (*i*), and that of Padre Martini, in this (*k*). France has likewise two, one by Bonet (*l*), and one by M. de Blainville (*m*); and Germany has not only produced two histories of Music in its own language, by Gaspar Printz (*n*), and by M. Marpurg (*o*); but one in Latin, lately published in two volumes, 4to. by the prince abbot of St. Blasius (*p*). Unluckily, those of P. Martini, and M. Marpurg, are not yet finished; and that of the learned abbot only concerns church music; so that though much has been done, much is still left for diligence to do (*q*); and however I may respect the learning, and admire the industry and abilities of some of these writers, yet I saw the wants of English musical readers through such a different medium, that I have seldom imitated their arrangements, and never servilely copied their opinions. Printed materials lye open to us all; and as I spared no expence or pains either in acquiring or consulting them, the merely citing the same passages from them, cannot convict me

(*i*) *Historia Musica*. In Perugia, fol. 1695.

(*p*) *De Cantu et Musica Sacra a prima Ecclesiæ ætate usque ad presens tempus*. Typis San-Blasianis. 1774.

(*q*) The History of Music by M. Bonet

is written upon a very narrow plan; for the second volume contains nothing more than exclusive eulogiums of Lulli, and illiberal censures of every species of Italian music. And though the work of M. de Blainville is nominally a *General History of Music*, yet, notwithstanding the splendid promises in the title, the whole *historical, critical, and philological* parts of this work, are comprised in less than half a thin quarto; the rest of the volume being filled with a treatise on composition. The Musical Dictionary of M. Rousseau, without promising any thing more than an explanation of terms peculiar to the theory and practice of Music, affords not only more amusement, but more *historical information* relative to the art, than perhaps any book of the size that is extant.

of

of plagiarism ; and with respect to manuscript information, and inedited materials from foreign countries, few modern writers have expended more money and time, and undergone greater fatigue, or more impaired their health in the search of them, than myself.

And yet, though all will readily allow, *in general*, that perfection is not to be expected in the works of man ; it is evident that, in *particular cases*, little tenderness is shewn to imperfection in the most difficult and laborious undertakings.

If I might presume to hope, however, for any unusual indulgence from the public with respect to this work, it must be from the peculiarity of my circumstances during the time it was in hand. For should the materials be found ill-digested, or the diction incorrect ; it is humbly hoped that part of these, and other defects, will be attributed to want of leisure and health, as well as want of abilities, to render it less unworthy the public patronage ; for it may with the utmost truth be said, that it was composed in moments stolen from sleep, from reflection, and from an occupation which required all my attention, during more than twelve hours a day, for a great part of the year.

If it be asked, why I entered on so arduous a task, knowing the disadvantages I must labour under, my answer is, that it was neither with a view to rival others, nor to expose the defects of former attempts, but merely to fill up, as well as I was able, a chasm in English literature. I knew that a history of Music was wanted by my countrymen, though I was utterly ignorant that any one else had undertaken to supply it ;

and, to confess the truth, I did, at first, imagine, though I have been long convinced of my mistake, that, with many years practice and experience in musical matters, some reading, and the possession of a great number of books on the subject, I should have been able to compile such a history as was wanted, at my leisure hours, without great labour or expence.

But, after I had embarked, the further I failed, the greater seemed my distance from the port: doubts of my own abilities, and respect for the public, abated my confidence; my ideas of what would be required at my hands were enlarged beyond my powers of fulfilling them, especially in the narrow limits of two volumes, and in the little time I had allowed myself, which was made still less by sickness.

A work like this, in which it is necessary to give authorities for every fact that is asserted, advances infinitely slower, with all the diligence that can be bestowed upon it, than one of mere imagination, or one consisting of recent circumstances, within the knowledge and memory of the writer. The difference in point of time and labour is as great as in building a house with scarce materials dug out of the earth, or produced in remote regions of the world, or with bricks made upon the spot, and timber from a neighbouring wood; and I have frequently spent more time in ascertaining a date, or seeking a short, and, in itself, a trivial passage, than it would have required to fill many pages with conjecture and declamation.

However, after reading, or at least consulting, an almost innumerable quantity of old and scarce books on the subject, of which the dulness and pedantry were almost petrific, and
among

among which, where I hoped to find the most information, I found but little, and where I expected but little, I was seldom disappointed; at length, wearied and disgusted at the small success of my researches, I shut my books, and began to examine myself as to my musical principles; hoping that the good I had met with in the course of my reading was by this time digested and incorporated in my own ideas; and that the many years I had spent in practice, theory, and meditation, might entitle me to some freedom of thought, unshackled by the trammels of authority.

Ancient writers upon science usually began with definitions; and as it is possible that this work may fall into the hands of persons wholly unacquainted with the elements of Music, a few preliminary explanations of such difficulties as are most likely to occur to them, may somewhat facilitate the perusal of the technical parts of my enquiries.

What is Music? An innocent luxury, unnecessary, indeed, to our existence, but a great improvement and gratification of the sense of hearing. It consists, at present, of *Melody*, *Consonance*, and *Dissonance*.

What is Melody? A series of sounds more fixed, and generally more lengthened, than those of common speech; arranged with grace, and of proportional lengths, such as the mind can easily measure, and the voice express. These sounds are regulated by a scale, consisting of tones and semitones; but admit a variety of arrangement as unbounded as imagination.

What is Consonance? A coincidence of two or more sounds, which being heard together, by their agreement and union, afford

afford to ears capable of judging and feeling, a delight of a most grateful kind.

What is Dissonance? It is the want of that agreeable union between two or more sounds, which constitutes consonance : in musical composition it is occasioned by the suspension or anticipation of some sound before, or after, it becomes a concord. It is the *Dolce piccante* of Music, and operates on the ear as a poignant sauce on the palate : it is a zest, without which the auditory sense would be as much cloyed as the appetite, if it had nothing to feed on but sweets.

What kind of musical tones are most grateful to the ear? Such as are produced by the vocal organ. And, next to singing, *what kinds of sound are most pleasing?* Those which approach the nearest to vocal. *Which are they?* Such as can be sustained, swelled, and diminished, at pleasure. Of these the first in rank are the Violin, Flute, and Hautbois. But *what instrument is capable of the greatest effects?* The Organ ; which can not only imitate a number of other instruments, but is so comprehensive as to possess the power of a numerous orchestra. But *has it no imperfections?* Yes. It wants expression, and a more perfect intonation.

What kind of music is most pleasing to mankind? To practised ears, such as has the merit of novelty, added to refinement, and ingenious contrivance : to the ignorant, such as is most familiar and common.

What was the music of the Greeks, concerning which the learned talk so much? It is impossible to speak of it with certainty ; however, the chief part of what I have to say concerning
ing

ing both the theory and practice of ancient music, is thrown into a Preliminary Dissertation, in order that the narrative might not be interrupted by discussions concerning dark and disputable points, which will be generally uninteresting even to musical readers; and in which it is very doubtful, whether I shall be able either to amuse or satisfy the learned.

There are already more profound books on the subject of ancient, as well as modern Music, than have ever been read; it was time to try to treat it in such a manner as was likely to engage the attention of those that are unable, or unwilling, to read treatises written, for the most part, by persons who were more ambitious of appearing learned themselves, than of making others so. Indeed, I have long since found it necessary to read with caution the splendid assertions of writers concerning music, till I was convinced of their knowledge of the subject; for I have frequently detected ancients as well as moderns, whose fame sets them almost above censure, of utter ignorance in this particular, while they have thought it necessary to *talk about* it. Apuleius, Pausanias, and Athenæus, among the ancients, were certainly musicians; but it is not so evident that Cicero, Horace, and others, who have interspersed many passages concerning Music in their works, understood the subject any more than our Addison, Pope, and Swift. Among these, the two first have written odes on St. Cecilia's day, in which they manifest the *entire separation* of Music and Poetry, and shew the possibility of writing well on what is neither felt nor understood.

Music and its admirers were ever contemned by Swift and Pope; but, having neither taste nor judgment in this art, they

they were surely unqualified to censure it. Few conquerors ever aimed at *universal monarchy*, compared with the number of authors who have wished to be thought possessed of *universal knowledge*; and yet these great writers, who discover, in what is within their competence, a vigour of mind, and elevation of genius, which inclines mankind to regard them as beings of a superior order, whenever they hope by the power of thinking to supply the place of knowledge, discover an imbecillity, which degrades them into common characters.

I will not, however, over-rate musical sensations so far as to say, with the poet, that the man who cannot enjoy them “*is fit for treasons, stratagems, and spoils* ;” there being, perhaps, among mankind, as many persons of bad hearts that are possessed of a love and genius for music, as there are of good, that have neither talents nor feeling for it: but I will venture to say, that it has been admired and cultivated by great and eminent persons at all times and in every country, where arts have been cherished: and though there may be no particular connection between correctness of ear, and rectitude of mind, yet, without the least hyperbole it may be said, that the organization of the auditory nerves must be more exquisitely perfect to be affected by sweet sounds, than to be insensible to, or offended by them.

But, as the Constable in *Much ado about Nothing*, says, “these are gifts which God gives,” and lovers of music should be content with their own superior happiness, and not take offence at others for enjoying less pleasure than themselves. However, it is no uncommon thing for the rich to treat the poor with as much insolence, as if it were a crime not to be

be born to a great estate ; yet, on the other hand, to be proud of beggary and want, is too ridiculous for censure.

With respect to the present work, there may, perhaps, be many readers who wish and expect to find in it a deep and well digested treatise on the theory and practice of music : while others, less eager after such information, will be seeking for mere amusement in the narrative. I wish it had been in my plan and power fully to satisfy either party ; but a history is neither a body of laws, nor a novel. I have blended together theory and practice, facts and explanations, incidents, causes, consequences, conjectures, and confessions of ignorance, just as the subject produced them. Many new materials concerning the art of Music in the remote times of which this volume treats, can hardly be expected. The collecting into one point the most interesting circumstances relative to its practice and professors ; its connection with religion ; with war ; with the stage ; with public festivals, and private amusements, have principally employed me : and as the historian of a great and powerful empire marks its limits and resources ; its acquisitions and losses ; its enemies and allies ; I have endeavoured to point out the boundaries of music, and its influence on our passions ; its early subservience to poetry, its setting up a separate interest, and afterwards aiming at independence ; the heroes who have fought its battles, and the victories they have obtained.

If the titles of my chapters should appear too general and miscellaneous, and the divisions and sections of my work too few ; if method and minute exactness in the distribution of its several subjects and parts should seem wanting ; the whole is, perhaps, the more likely to be read for these deficiencies ; for a

history, of which the contents are symmetrically digested, separated by chapters, and sub-divided into sections, may be easily consulted, but is no more likely to be read throughout, than a dictionary.

My subject has been so often deformed by unskilful writers, that many readers, even among those who love and understand music, are afraid of it. My wish, therefore, is not to be approached with awe and reverence for my depth and erudition, but to bring on a familiar acquaintance with them, by talking in common language of what has hitherto worn the face of gloom and mystery, and been too much “ficklied o’er with the pale cast of thought;” and though the mixing biographical anecdotes in order to engage attention, may by some be condemned, as below the dignity of science, yet I would rather be pronounced trivial than tiresome; for Music being, at best, but an amusement, its history merits not, in reading, the labour of intense application, which should be reserved for more grave and important concerns.

I have never, from a vain display of erudition, loaded my page with Greek; on the contrary, unless some disputable point seemed to render it necessary, or the passage was both remarkable and short, I have industriously avoided it, by referring my learned readers to the original text; and as I pretend not to such a profound and critical knowledge in that language as to depend entirely upon myself, in obscure and contested passages, I have, when such occurred, generally had recourse to the labours of the best translators and commentators, or the counsel of a learned friend. And here, in order to satisfy the sentiments of friendship, as well as those of gratitude, I must publicly

publicly acknowledge my obligations to the zeal, intelligence, taste, and erudition of the reverend Mr. Twining; a gentleman whose least merit is being perfectly acquainted with every branch of theoretical and practical music.

As ancient Greek Music had its *technical terms*, as well as the modern Italian, with which many excellent scholars and translators from that language, for want of an acquaintance with Music, and Greek musical writers, have been utter strangers, I may venture to observe that I have tried, and I hope not always without success, to trace these terms in ancient authors, in order to discover their original acceptation.

It would be a false, and perhaps offensive modesty, if I were here to trouble the reader with apologies for the length and frequency of quotations from the Iliad and Odyssey, and other ancient poets besides Homer; as it will be shewn, that history has no other materials to work upon in times of high antiquity, than those poems, which have always been regarded as historical; prose compositions having been utterly unknown in Greece for 300 years after most of them were written (*r*).

I have never had recourse to conjecture, when facts were to be found. In the historical and biographical parts, I have asserted nothing without vouchers; and I have made the ancients tell their own story as often as was possible, without disputing with them the knowledge of their own history, as many moderns have done; for I cannot help supposing them to have been full as well acquainted with their own affairs 2000 years

(*r*) Cadmus Milesius, whom antiquity allowed to have been the inventor of history *in prose*, flourished, according to Sir Isaac Newton, 550 years B. C. and He-

rodotus, the oldest Greek historian whose writings are preserved, died 484 years before the same æra.

ago, as we are at present. An ancient Greek might, with almost equal propriety, have pretended to foretell what we *should be*, at the distance of 2000 years, as we determine now what they then *were*.

Indeed it was my intention, when I first entered upon this work, to trace the genealogy of Music in a *right line*, without either meddling with the collateral branches of the family, or violating the reverence of antiquity. I wished and determined to proportion my labour to my powers, and I was unawares seduced into a course of reading and conjecture, upon matters beyond the reach of human ken, by the chief subject of my enquiries being so extensively diffused through all the regions of literature, and all the ages of the world. I found ancient Music so intimately connected with Poetry, Mythology, Government, Manners, and Science in general, that wholly to separate it from them, seemed to me like taking a single figure out of a group, in an historical picture; or a single character out of a drama, of which the propriety depends upon the dialogue and the incidents. If, therefore, a number of figures appear in the back-ground, I hope they will give *relief*, and somewhat keep off the dryness and fatigue which a single subject in a long work, or a single figure if often repeated, though in different points of view, is apt to produce.

DISSERTATION
ON THE
MUSIC
OF THE
ANCIENTS.

IT is with great, and almost hopeless diffidence, that I enter upon this part of my work; as I can hardly animate myself with the expectation of succeeding in enquiries which have foiled the most learned men of the two or three last centuries. It has been remarked by Tartini, in speaking of ancient music, that doubt, difficulty, and obscurity, should not be all imputed to the author, but to the subject, since they are in its very essence: for what, besides conjecture, is now left us, concerning things so transient as sound, and so evanescent as taste?

The land of conjecture, however, is so extensive and unappropriated, that every new cultivator has a right to break up fresh ground, or to seize upon any spot that has long lain fallow, without the sanction of a grant from any one who may arrogate to himself the sovereignty of the whole, or of any neglected part of it. But though no one has an exclusive right to these imaginary regions, yet the public has a just power of censuring the methods of improvement adopted by any new

inhabitant, and of condemning such productions as may be deemed unfit for use.

The opinions of mankind seldom agree, concerning the most common and obvious things; and consequently will be still less likely to coincide about others, that are reducible to no standard of truth or excellence, but are subject to the lawless controul of every individual who shall think fit to condemn them, either with, or without understanding them.

Dr. Johnson has well said, that "those who think they have done much, see but little to do;" and with respect to ancient music, I believe those who have taken the greatest pains to investigate the subject, are the least satisfied with the success of their labours.

The whole is now become a matter of faith; but it is difficult to believe implicitly every pompous description given us by the ancients of the powers of their music, while we see their instruments, as represented in sculpture, so simple, and, seemingly, incapable of producing great effects.

Read their theorists, and even the practical musician Aristoxenus, and what do we learn, but that the ears of the Greeks were very delicate as to intonation, and the divisions of their scales; but among all that author's speculations, we can find no traces of *melody*, or *harmony*, such as we understand by *air* accompanied with *different parts*.

What the ancient music really was, it is not now easy to determine; but of this we are certain, that it was something with which mankind was extremely delighted: for not only the poets, but the historians and philosophers of the best ages of Greece and Rome, are as diffuse in its praises, as of those arts concerning which sufficient remains are come down to us, to evince the truth of their panegyrics. And so great was the sensibility of the ancient Greeks, and so soft and refined their language, that they seem to have been, in both respects, to the rest of the world, what the modern Italians are at present.

For

For of these last, the language itself is music, and their ears are so polished and accustomed to sweet sounds, that they are rendered fastidious judges of melody, both by habit and education.

But as to the superiour or inferiour degree of excellence in the ancient music, compared with the modern, it is now as impossible to determine, as it is *to hear both sides*.

Indeed it is so entirely lost, that the study of it is as unprofitable as learning a dead language, in which there are no books; and yet this study has given rise to so much pedantry, and to such an ambition in modern musical authors, to be thought well versed in the writings of the ancients upon music, that their treatises are rendered both disgusting and unintelligible by it. *Words* only are come down to us without *things*. We have so few remains of ancient music by which to illustrate its rules, that we cannot, as in painting, poetry, sculpture, or architecture, judge of it, or profit by examples; and to several of these terms which are crammed into our books, we are utterly unable to affix any precise or useful meaning. To write, therefore, in favour of ancient music now, is like the emperor Julian's defending paganism, when mankind had given it up as indefensible, and had attached themselves to another religion.

However, it is, perhaps, a fortunate circumstance for modern music that the ancient is lost, as it might not have suited the genius of our language, and might have tied us down to precedent; as the writers of modern Latin never dare hazard a single thought or expression without classical authority.

The subject itself of ancient music is so dark, and writers concerning it are so discordant in their opinions, that I should have been glad to have waved all discussion about it. For to say the truth, the study of ancient music is now become the business of an antiquary more than of a musician. But in

every history of music extant, in other languages, the practice had been so constant for the author to make a display of what he knew, and what he did *not* know concerning ancient music, that it seemed absolutely necessary for me to say something about it, if it were only to prove, that if I have not been more successful in my enquiries than my predecessors, I have not been less diligent. And it appeared likewise necessary, before I attempted a history of ancient Greek music, to endeavour to investigate its properties, or at least to tell the little I knew of it, and ingenuously to confess my ignorance and doubts about the rest.

Indeed it was once my intention to begin my history with the invention of the *present musical scale* and counterpoint; for

“What can we reason, but from what we know?”

But it was impossible to read a great number of books upon the subject, without meeting with conjectures, and it was not easy to peruse these, without forming others of my own. If those which I have hazarded should throw any light upon the subject, it will enable my readers to travel through the dark maze of inquiry with more facility, and consequently less disgust; and if I fail in my researches, and leave both the subject and them where I found them, as the expectation which I encourage is but small, so it is hoped will be their disappointment. For with respect to all I have to say, I must confess that the Spanish motto adopted by Francis le Vayer, is wholly applicable.

De las cosas mas seguras

Le mas segura es dudar (a).

In wading through innumerable volumes, with promising titles, and submitting to the drudgery of *all such reading as was never read*, I frequently found that those who were most

(a) The most certain of certain things, is doubtful.

diffuse upon the subject, knew least of the matter; and that technical jargon, and unintelligible pedantry so loaded each page, that not an eligible thought could be found, in exploring thousands of them. Indeed my researches were sometimes so unsuccessful, that I seemed to resemble a wretch in the street, raking the kennels for an old rusty nail. However, the ardour of enquiry was now and then revived by congenial ideas, and by gleams of light emitted from penetration and intelligence; and these will be gratefully acknowledged, whenever they afford assistance.

SECTION I.

Of the Notation or Tablature of Ancient Music, including its Scales, Intervals, Systems, and Diagrams.

THE music of the ancients, according to Euclid, Alypius, and Martianus Capella, was divided into seven constituent parts: these were sounds, intervals, systems, genera, modes, mutations, and melopœia, or the composition of melody. To these divisions, which only comprehended the mere mechanism of the art, theorists added five other requisites, no less essential for a musician to know, than the preceding seven: and these were, rhythm, or the regulation of cadences in all kinds of movement; metre, or the measure of verses; organic, or instrumental; hypocritic, or gesture; and poetic, or the rehearsal of verses. In order to communicate to my readers all the information I am able, upon so dark and difficult a subject, I shall consider the music of the ancient Greeks under such heads only as absolutely concern music, according to our acceptation of the word; for it is plain that several of its ancient divisions more immediately belonged to poetry. Indeed these two arts were at first so intimately connected, and so dependant on each other, that rules for poetry were, in general, rules for music; and the properties and effects of both were so much confounded together, that it is extremely difficult to disentangle them.

Leaving therefore, for the present, all other distinctions, divisions, and subdivisions, with which ancient musical treatises abound, I shall proceed to fulfil the title of this section.

In the study of modern music, the first objects of enquiry are the names by which the several sounds in the scale are expressed;

pressed; and, if we regard music as a language, the scale or gammut may be called its alphabet.

Plutarch says, that it is not sufficient for a musician to know what kind of music should be set to any particular poem; he should likewise know how to write it down in all the *genera* (b), that is to say, in the *diatonic* or natural scale, consisting of tones and semitones, as at present; in the *chromatic*, in which the scale was divided into semitones, and minor thirds; and in the *enharmonic* genus, moving by quarter tones, and major thirds, as will be explained hereafter.

It does not appear from history, that the Egyptians, Phœnicians, Hebrews, or any ancient people, who cultivated the arts, except the Greeks and Romans, had musical characters; and these had no other symbols of sound than the letters of their alphabet, which likewise served them for arithmetical numbers, and chronological dates.

As the notation of the Greeks was imagined in the infancy of the art of music, when the flute had but few holes, and the lyre but few strings, the simplicity of expressing the octave of any sound by the same sign, as in modern music, was not thought of; the most ancient and constant boundary of musical tones having been the *Diatefferon*, or fourth, the extremes of which interval were fixed, though the intermediate sounds were mutable: and in the manner of tuning these consisted the difference of intervals in the several genera (c).

The Greek scale, in the time of Aristoxenus, the oldest writer upon music, whose works are come down to us (d), extended to two octaves, and was called *Systema perfectum, maximum, immutatum*; the great, the perfect, the immutable system; because its extremities formed a perfect consonance, including all the simple, double, direct, and inverted concords,

(b) De Musica.

(c) See Sect. II.

(d) He flourished three hundred and forty years before Christ.

with

with all the particular systems; and it was the opinion of the ancients that this disdiapason, or double octave, was the greatest interval which could be received in melody.

This whole system was composed of five *tetrachords*, or different series of four sounds, and one note added at the bottom of the scale to complete the double octave; whence the string which produced this sound was called *προσλαμβανομεν*, *Proslambanomenos*, or note subjoined to the scale; for though this was constantly the lowest sound in all the modes, it was not included in the tetrachords (e).

All these sounds had different denominations in the system, like our *Gammut*, *A re*, *B mi*, *C fa ut*, &c. besides two different characters, one vocal, and the other instrumental, appropriated to each sound in the several modes and genera, for the purpose of writing down melodies.

That the fourth was a favourite and important interval in the music of the ancients, is plain from the great system of two octaves having been composed of five of these tetrachords, in the same manner as the scale of Guido is of different hexachords.

The first tetrachord is called by the Greek musicians *Hypaton*, or principal; the sounds of which are denominated:

1. *Hypate hypaton*, principal of principals;
2. *Parypate hypaton*, next the principal;
3. *Lichanos hypaton*, or index of principals; from its having been played with the index or fore-finger. This third sound of the first tetrachord in the Diatonic genus, was likewise called *Hypaton Diatonos*.

4. *Hypate meson*, or principal of the middle or mean tetrachord; for this sound not only served as the last or highest note of the first tetrachord, but as the first or lowest of the second; whence these two tetrachords were called conjoint, or con-

(e) How this great system, from three double octave, and by whom, will be related in the course of the history.

nected.

nected. These four denominations of the sounds in the first tetrachord may be compared with the terms *B mi*, *C fa ut*, *D sol re*, and *E la mi*, in the Guido scale; or with the sounds

The sounds of the *Meson*, or middle tetrachord, were placed in the following order:

Hypate Meson, or principal of the mean tetrachord;

Parypate Meson, next to the middle principal;

Lichanos Meson;

Mese, or middle, as this sound completes the second tetrachord, and is the center of the whole system. The sounds of this tetrachord correspond with those which in the base of the scale of Guido, are called *E la mi*, *F fa ut*, *G sol re ut*, and

A la mi re, which are equivalent to

The *Mese* in ancient music was of equal importance with the key note in modern music: being an octave above the *Proslambanomenos*, which was the lowest sound of the ancient modes, and a kind of key note to them all.

Euclid calls *Mese* the sound by which all other sounds are regulated. And Aristotle, in his XXXVIth problem, sect. 19, asks why all the tones of a scale are accommodated, or tuned, to the *Mese*? The same author likewise tells us, problem XX. that all melody, whether it moves above or below the *Mese*, has a natural tendency to that sound.

The third tetrachord, beginning by the last note of the second, was thence called *Synemmenon*, the *united*, or *conjunct* tetrachord; the sounds of which proceed in the following order:

Mese;

Trite Synemmenon, or third string of this tetrachord from the top;

Paranete Synemmenon, penultima of this tetrachord;

Nete Synemmenon, last of the *Synemmenon* tetrachord; the four sounds of which correspond with those in the center of our gammut, that are called A *la mi re*, B *fa*, C *sol fa ut*, and

D *la sol re*, or  (f).

The fourth tetrachord, ascending, is called *Diezeugmenon*, disjunct, or separated, as it begins at B natural, which is not a note in common with any one in the other tetrachords. But though this system of four sounds is only an octave higher than that of the first tetrachord, and though the next is but a replicate of the second, I shall present them to the reader, as the several sounds of which they are composed have in the Greek music different denominations.

The lowest sound of the second octave, or series of eight sounds in the ancient great system, and the first of the fourth tetrachord, begins with the note

Paramese, near the *Mese*, or middle sound; the next is called

Trite Diezeugmenon, or third string of this tetrachord from the top: then follows the *Paranete Diezeugmenon*; and lastly, the

(f) After ascending regularly thus far, up to D, by three conjoint tetrachords, the fourth tetrachord in the great system is begun by descending a minor third to B natural, the octave above the first sound of the lowest tetrachord. Something of this *dodging* kind is to be found in the scale of Guido, divided into hexachords: for, after

ascending six notes regularly in the *durum hexachord*, it is necessary to descend a major third, if we would begin the *natural hexachord*; and when the natural hexachord is completed, if we would begin at the *Molle*, it can only be done by a leap of a third below. This will best appear by an example in notes:

It appears from the Greek tetrachords, as well as from this example, that neither the ancients nor the early moderns ad-

mitted the *sharp seventh* of a key into their scales.

Nete

Nete Diezeugmenon, or final sound of this tetrachord, which includes the sounds B *mi*, C *sol fa ut*, D *la sol re*, and E *la mi*, in the middle of the Guido scale, or

The last sound of the fourth tetrachord is the first of the fifth, which is called the *Hyperbolæon*, or supreme tetrachord; the sounds of which ascend in the following order :

Nete Diezeugmenon, last of the diezeugmenon tetrachord ;

Trite Hyperbolæon, third string of the hyperbolæon tetrachord ;

Paranete Hyperbolæon, penultima of the supreme tetrachord ;

Nete Hyperbolæon, last of the supreme, or highest tetrachord, and of the great system, or diagram.

This last tetrachord being added to the scale long after its first formation, was called *Hyperbolæon*, from its sounds being more acute than the rest, and beyond the common bounds of the scale ; in the same manner as, with us, the notes above D in the treble are said to be *in alt*. This tetrachord includes the sounds E *la mi*, F *fa ut*, G *sol re ut*, and A *la mi re*, or

The ancients used likewise four different monosyllables ending with different vowels, by way of *solmisation*, for the exercise of the voice in singing ; like our *mi*, *fa*, *sol*, *la*. These were, for the first note of each tetrachord, $\tau\alpha$, for the second $\tau\eta$, for the third $\tau\omega$, and for the fourth, if it did not serve as the first of the adjoining and relative tetrachord, $\tau\epsilon$; but if it began a new tetrachord, it was called by the first name, $\tau\alpha$.

The repetition of these monosyllables is a further proof that the *fourth* in the ancient music served as a boundary to a system of four sounds, in the same manner as a hexachord did in the Guido scale, and as an octave does for eight sounds in the more modern practice.

Any interval between the terms of which one or more sounds intervened, was by the ancients called a *System*: EG, for example, constituted a system of a third minor; EA, of a fourth; EB, of a fifth, &c.

These smaller systems were of different species; thus there were three kinds of tetrachord, that differed in melody by the position of the semitone, which was sometimes at the beginning, sometimes at the end, and sometimes in the middle: as in the following example, where the black notes are semitones, and the white, tones.

As the Greeks used all the four and twenty letters of their alphabet for musical characters, or symbols of sound; and as their most extensive system or scale did not exceed two octaves, or sixteen sounds, it should seem as if their simple alphabet was more than sufficient to express them; for their music being only a notation of their poetry, the rhythm, or air, must have been determined by the metre of the verses, without the assistance of signs of proportion peculiar to music. But supposing it was necessary for them to have different characters to express the different feet of the verse, it is certain that vocal music was in no want of them; and instrumental being nothing more than vocal music played by instruments, had likewise no need of them, when the words were written, or the player knew them by heart.

However, in order to multiply these characters, the letters of their alphabet were sometimes written in capitals, and sometimes small; some were entire, some mutilated, some doubled, and some lengthened; and besides these distinctions in the form of the letters, they had others of situation, sometimes turning them to the right, sometimes to the left; sometimes inverting,

inverting, and sometimes placing them horizontally; for instance, the letter *Gamma*, by these expedients, served to express seven different sounds: Γ L 1 ꝑ ꝑ ꝑ ꝑ. Some of the letters were also barred, or accented, in order to change their symbolical import; and these still not sufficing, they made the common grave and acute accents serve as specific musical notes.

It is a matter that has been long disputed among the learned, whether *accents* were originally *musical* characters, or marks of *prosody*. It is in vain to set about determining a question concerning which the proofs on both sides are so numerous (g). But as music had characters different from accents so early as the time of Terpander, to whom the invention is given by the Oxford marbles, which place this event about six hundred and seventy years before Christ; and as accents for prosody are likewise proved to be of high antiquity, it seems as if there could have been no necessity for the ancients to use one for the other.

But it has already been remarked that the letters of the alphabet, though turned, distorted, and mutilated, so many different ways, were insufficient to express the sounds of all the modes in the three genera; so that recourse was had to *accents*, as the scale became more extended, in order to augment the number of characters. And Alypius, in the enumeration of the notes in the enharmonic genus, tells us, that *Trite Synemmenon* is represented by *Beta* and the *acute accent*;

(g) See Gally and Spelman *against accents*, and Primatt and Forster in *defence* of them. Mr. West is firmly of opinion "that accents were originally *musical notes*, set over words to direct the several *tones* and inflexions of the voice, requisite to give the whole sentence its proper harmony and cadence." Pind. vol. ii. And the abbé du Bos, who frequently by a peremptory decision cuts the knot of such difficulties as he is unable to untie, asserts,

without sufficient proof, that as poets originally set their own verses, they placed for this purpose a figure, or *accent*, over each syllable. So that, according to this writer, we are at present, not only in possession of the poetry of Homer, Pindar, Anacreon, and Sappho, but their music. —Why then do we complain of the total loss of Greek music? See Reflex. Critique, c. iii. p. 85.

and

and *Paranete Synemmenon enarmonios* by *Alpha*, and the *grave accent* (*h*).

This is a proof that the accents were known at the time of Alypius, and were then used chiefly for prosody, not music, for which they were only called in occasionally. Indeed they are mentioned as accentual marks by writers of much higher antiquity than Alypius; for not only Cicero and Plutarch, but Aristotle and Plato, speak of them as merely regarding the elevation and depression of the voice in speech. However, in the early Greek and Roman missals, as will be shewn hereafter, the musical characters used in *Canto Fermo*, seem to have been only *lengthened accents*.

These various modifications of letters and accents in the Greek notation composed in all one hundred and twenty different characters, which were still considerably multiplied in practice; for each of these characters serving many purposes in the vocal as well as instrumental tablature or gammut, and being changed and varied according to the different modes and genera, as the names of our modes are changed by different clefs and keys, the one hundred and twenty Greek characters produced one thousand six hundred and twenty notes! (*i*)

Two rows of these characters were usually placed over the words of a lyric poem; the upper row serving for the voice, and the lower for instruments.

If we had not the testimony of all the Greek writers who have mentioned these characters, for their use and destination, it would be natural to suppose that the double row of different

(b) Βητα και οξεια, Β' : — αλφα και βα-
ρεια, Α'. Alop. Edit. Meibom. p. 56.

(i) Not contented with using all the letters of the alphabet, in every possible situation, as symbols of sound, the Greeks mutilated and distorted them in order to augment their number; just as the ancient Ægyptians, who in their animal idolatry and religious ceremonies, "besides the

adoration of almost every thing existing, worshipped a thousand chimeras of their own creation, some with human bodies, and the head or feet of beasts; others with brutal bodies, and the head or feet of men; while others again were a fantastical compound of the several parts of beasts, birds, and reptiles, terrestrial and aquatic." Div. Leg. vol. iii. p. 178.

letters

letters placed over each other, and above the words of a poem, were intended to express *different parts*, with respect to *harmony*; as with us, in modern music, the treble notes are written over the base, and the first treble over the second; but Alypius, who is extremely minute in his instructions concerning the use of these characters, in all these modes, tells us, in express terms, that the upper line of the notes is for the words, and the lower for the lyre (*k*). And he afterwards proves them to have been unisons to each other, both by his definitions, and by placing them opposite to the same sound in all the scales.

In this author, the notes of the great system of the Lydian mode in the diatonic genus, are ranged in the following order:

Z T R Φ C P M I Θ Γ U Z E U Θ J M' I
 Γ L F C O T < V N Z E J Z η A T < (l).

And these he defines in such a manner, as leaves no room to doubt of the identity of their signification.

Z Γ *Proslambanomenos*, an imperfect *Zeta*, and a *Tau* placed horizontally.

T Γ *Hypate Hypaton*, an averted *Gamma*, and a *Gamma* direct.

R L *Parypate Hypaton*, an imperfect *Beta*, and a *Gamma* inverted.

Φ F *Hypaton Diatonos*, a *Phi*, and a double *Gamma*.

C C *Hypate Meson*, *Sigma* and *Sigma*.

P O *Parypate Meson*, *Rho* and *Sigma* inverted.

(k) Σημια τα μὲν ἀνω, τῆς λέξεως· τα δὲ κατω τῆς κρηστῆς. Introd. Mus. Edit. Meibom. p. 2.

(l) It is somewhat strange that the notes for the voice in ancient music, should be placed *above* those for the lyre, and consequently further from the words. Meibomius, in his preface, has, however, given

a curious reason for this custom, from a fragment of Bacchius, senior: "The upper line of notes is for the poem, the lower for the lyre; because the mouth, which alone gives utterance to the words, is placed by nature above the hands, which produce tones from the instrument."

Μ Π *Meson Diatonos*, *Mu*, and a lengthened *Pi*.

Ι < *Mese*, *Iota*, and a horizontal *Lambda*.

Θ ∨ *Trite Synemmenon*, *Theta*, and an inverted *Lambda*.

Γ Ν *Synemmenon Diatonos*, *Gamma* and *Nu*.

Ω Ζ *Nete Synemmenon*, an inverted *Omega* and a *Zeta*.

Ζ ⊔ *Paramese*, *Zeta*, and *Pi* placed horizontally.

Ε ⊔ *Trite Diezeugmenon*, *Epsilon*, and an inverted *Pi*.

Ω Ζ *Diezeugmenon Diatonos*, as *Nete Synemmenon*, which was the same string in the lyre.

Φ η *Nete Diezeugmenon*, horizontal *Phi*, and a small *Eta*, lengthened.

Α † *Trite hyperbolæon*, an inverted *Upsilon*, and an imperfect *Alpha*.

Μ' Π' *Hyperbolæon Diatonos*, *Mu*, and a lengthened *Pi*, accented.

Ι <' *Nete Hyperbolæon*, *Iota*, and an accented *Lambda*, placed horizontally.

It is to the indefatigable labour of the learned Meibomius, in his Commentaries upon the ancient Greek Musicians, particularly Alypius, that we are able to decypher these characters, which, before his time, had been so altered, corrupted, disfigured, and confounded, by the ignorance or negligence of the transcribers of ancient manuscripts, that they were rendered wholly unintelligible.

In examining the three diagrams of Alypius, where the notation of all the fifteen modes in each genus is given, I have frequently tried to find some rule for the use of different kinds of letters, or reason for the confusion in which they appear in the scale. I thought it would have furnished something of an historical deduction, if I could have discovered that the simple letters of the alphabet were used in a regular series, to express the sounds ascending or descending, in any one mode of the several genera. For it was natural to suppose, that in the first use of the alphabet for notes as well as numbers, the order would

would have been regular; and if such a regularity could have been found, in any mode of the three genera, it might have been presumed that such mode was the *first* to which the alphabetic characters had been applied.

Indeed something like regularity appears, in passing the eye obliquely upwards from *Mese* to *Nete hyperbolæon*, in all the genera, particularly in the enharmonic diagram, where the letters proceed by quarter tones, as is generally the case, but with many exceptions: I tried in vain to find the *rule* for these exceptions. All the notes in the horizontal range of the several diagrams, are at the same *pitch*; but they are frequently expressed by different characters, for which I have been able to assign no solid reason. And, on the contrary, notes of a *different* pitch are sometimes expressed by the *same* character, for which I am equally unable to account. The letters and scale go on in a direct series of quarter-tones for some time; but afterwards, a letter is, unaccountably, either omitted or repeated, which interrupts all regularity. I rather suspect, however, that these perplexities may arise from the modes being a semitone above each other. Ptolemy, lib. II. cap. 2. speaks of the inconvenience of this arrangement of modes, owing to the necessity of altering in some of them the tuning of all the strings. I suspect likewise, that where the *same* note, in the *same* horizontal line, is expressed by different characters, it was to suit the lyre; and that the two different sounds were expressed with the *same* mark, to suit the fingers.

After a long and painful meditation upon these diagrams, all that I am able to discover like *regularity* and *constancy* in them, is in the following particulars:

I. In all the three genera the simple alphabet is used for the upper octave of the *Disdiapason*, beginning with A at the semitone above *Nete hyperbolæon*, and always ending with *Omega* in *Mese*. From thence downwards the second alphabet is used,

VOL. I.

D

consisting

(*m*) consisting of the disguised, and mutilated letters, but in the same regular order of the alphabet, beginning always from *Mese*, and ending with the divided *Phi* $\alpha \alpha$ in proslambanomenos of the Hypodorian mode.

The order of the letters in these several instances is broken and interrupted, but no where, that I have been able to discover, reversed, or promiscuous. Then from the semitone above *Nete hyperbolæon* upwards, to $\alpha\alpha$, the octave of *Nete synemmenon*, six other characters are used, and these are still the six last letters of the alphabet in a different dress: if these are turned downwards from $\Lambda\Lambda$, to ΥZ , they will be found as regular as the former letters.

To complete the *three octaves and one tone*, in giving all the fifteen modes intire, there still remain thirteen characters more, which are repeated from the first alphabet of *simple* letters, except the Υ at the top: after *that* character, they descend regularly from $\Lambda\Lambda'$ to OK' , distinguished only by an accent. The plain alphabet therefore is used down to *Mese*, and the disguised alphabet from *mese* to proslambanomenos. Six new disguised letters, however, appear from the octave above *Trite synemmenon*, up to the octave above *Nete synemmenon*: and thirteen old ones, with the addition only of a *virgula*, from thence up to the double octave above *Paramese*.

2. In the enharmonic and chromatic genera the characters are exactly the same, and in the same perpendicular order, in all the modes; only the *chromatic Lichani*, the distinguishing strings of each genus, are marked, as Meibomius observes, with a *dash*, to distinguish them from the *enharmonic Lichani* (*n*).

3. In all the three diagrams the strings, except the *Lichani*, have the same characters: this will appear in examining any

(*m*) Vide Meibom. in Præf.

(*n*) The third string ascending, of each

of the two lowest tetrachords, is called *Lichani*.

of the modes ascending or descending *perpendicularly*, and missing the *red* characters, which are the *Lichani*; for the order of the rest, which are *black*, will be found exactly the same in all the genera. Thus much seems fixed and constant in all the diagrams of Alypius, as published by Meibomius, and upon which these remarks are intended as a commentary.

With respect to the multiplicity of characters, it is natural to suppose that the Greeks began their notation when their compass was small: as that was extended, they were forced by degrees to augment the number of their musical characters. And when this method of notation by the letters of the alphabet was once established, nothing was more obvious than to repeat the same letters, which admitted of such easy variation, by position, mutilation, and accents. The order of instrumental notes is much more wild and unaccountable than that of the vocal, to which these remarks have been hitherto confined.

I am fearful of swelling my book too much with these conjectural explications, though there is scarce a single circumstance relative to ancient music which does not require them. However, amidst so much doubt and obscurity, two points seem clearly demonstrable: first, that the enharmonic genus moving in *dieses*, or quarter-tones, is the most regular in its notation; which encourages a belief that this genus, however unnatural and difficult to us, must have been not only very ancient, but the first that was expressed in writing; and consequently, at some one period of time, must have been in the *most general use* (o). Secondly, that it must have been usual to read the general scales, or diagrams, backwards, *descending* from acute to grave; which, as all the ancient modes were in what we should call *minor keys*, must have been more agreeable to the ear than ascending, for want of a sharp-seventh. This, however,

(o) See Sect. II.

does not imply that the tetrachords were *always* read in that order; for these being much more ancient than the alphabetic notation, had been long tuned and regulated from *grave* to *acute*.

The neglect of these distinctions will introduce a universal scepticism concerning every part of ancient music. But provided the intervals are determined, it is of as small consequence whether the scale is read from the top to the bottom, or the bottom to the top, as whether a child is taught to repeat the modern gammut from G in the treble, or G in the base.

The scales of Aristoxenus, Euclid, and Alypius, begin at *Proslambanomenos*, it is true; but though this note is first named in the descriptions and definitions of the founds of the several systems, and consequently stands *highest in the page* where it is mentioned, yet it does not follow that it was the most acute found in the scale, or that it was produced by the shortest string in the ancient lyre (*p*). But so disputable is every thing that concerns Greek music, that it has even been doubted whether this leading note was the highest or lowest of the scale.

Galilei, Zarlino, Bontempi, Tevo, M. Rousseau, Dr. Brown, and others, have asserted, that the terms, *high* and *low*, had different acceptations among the ancients, from those in which they are understood by the moderns, without guarding, as they ought to have done, against such consequences, with respect to the situation of the scale, as it was natural for the reader to draw from that assertion.

Dr. Pepusch asserts roundly, and without the least modification of doubt, or even condescending to allege a single reason or proof in defence of his opinion, that "it was usual among

(*p*) If a verbal description of the modern gammut were given in writing, without notes, it would have the same appear-

ance: C ut, A re, B mi, C fa ut, D fol re, E la mi, F fa ut, G fol re ut, A la mi, B fa B mi, C fol fa ut, &c.

the Greeks to consider a *descending* as well as an *ascending* scale; the former proceeding from acute to grave, precisely by the same intervals as the latter did from grave to acute. The *first* sound of each was the *Proslambanomenos* (q)."

No instances of these *inverted* scales are to be found, however, in Aristoxenus, Euclid, or any of the oldest and best writers. Boethius, Bryennius, and some other of the more modern compilers, have, indeed, puzzled the cause by ambiguous expressions, which seem to bear such construction (r); and Dr. Pepusch, the oracle of his time, who equalled at least that of Delphos by the darkness of his decrees, readily jumped to any conclusion that would involve a musical question in mysterious and artificial difficulty.

It seems as if all this perplexity and confusion had arisen from the want of precision in the musical nomenclator of the Greeks. The prepositions ὑπο, *sub*, ὑπερ, *super*, and the adjectives ὑπατος, *summus*, and νητος, *imus*, have manifestly been applied to sounds more to express their situation in the lyre and diagrams, than the length of the strings, or the gravity and acuteness of their tones.

Dr. Wallis, in his Appendix to Ptolemy's Harmonics (s), explains this difficulty in the following manner.

"The Greeks called *Hypate*, *supreme*, though it is the lowest sound or string of the tetrachord; and *Nete*, *last*, or *lowest*, though the most acute. (This Henry Stephens acknowledges at the word νητε, which he defines *ultimam seu imam*: and *paranete, imæ proximam*): therefore those who first made use of these names, applied them differently from us, calling grave, *high*, and acute, *low*. And thus Nichomachus, p. 6, calls Saturn, the highest of the planets, *Hypate*; and the moon, the lowest, with respect to us, *Nete*. Boethius likewise, in his

(q) Phil. Trans. No. cccclxxxi. p. 226, and Martyn's Abridg. Vol. X. Part 1. p. 261.

(r) Meibom. in Gaudent. p. 33, et Wallis in Bryennio, p. 364, et seq.

(s) P. 159. Fol. Ed.

Treatise on Music, places, in all his diagrams, the low sounds at the top, and the high ones at the bottom. But, he concludes, that we must not attend to the original import of these words, *summus* and *imus*, but understand *Hypate* and *Nete* as *first* and *last*, or *principal* and *extreme*, as Aristides Quintilianus has done, p. 10."

In the first, or Mercurian lyre, the longest string, which produced the lowest sound, from being placed highest in the instrument, as is the case with the modern harp, was called *Hypate*, the highest sound, and *Nete*, for the same reason, was afterwards, upon the extension of the scale, called *lowest*, though the most acute. *Trite*, the third string from the top of the two last tetrachords, had its name, as in our violins, by comparison with the smallest strings. From a passage in Aristides Quintilianus (*t*), it seems as if the Greeks, in naming and numbering the notes of their scale, made it a rule always to go *towards Mese*, and end with it, as being the regulator of the other notes, and situated in the *medium* of the voice. This is confirmed by the problem of Aristotle already cited, and this confirms what has been already observed of the order of the alphabetic notation, in which *Mese* is always expressed by *Omega*. It seems, therefore, as if the Greeks *ascended* the lower octave of the diadaphon, and *descended* the upper one; otherwise it is not easy to see why the strings of the upper octave should have names referring, as they evidently do, to a *descending* series, and in an order *opposite* to those of the *lower* octave (*u*).

Παρα, in the compound names of the notes, evidently means *next in order*; *Parypate*, in the *lower* octave, then is *ascent*; *Paranete*, in the *upper* octave, plainly *descent*. The same is implied in *Trite*. But the term *Nete*, last, looks very like *ascent* again—*And darkness was upon the face of the deep!*

(*t*) P. 11, at the top.

(*u*) See Meibomius's note upon Arist. Quintil. p. 11, which seems solid.

Edit. Meibom. he represents *Proslambanomenos* by the *whole string*: so that, if any thing concerning ancient music can be made certain, it is, that this whole string represented the *lowest sound* in the Greek scale, which, in the Hyperdorian mode, was equivalent to the note A - - - -

Half the string, *Mese*, its octave, a, - - - -

Third part, *Nete diezeugmenon*, fifth of the octave, e, - - - -

And the fourth part of the string, *Nete hyperbolæon*, the double octave, aa, - - - -

which are all the concords that the ancients admitted. Eight ninths of the string are allotted to the sound *Hypate Bareia*, *Gravis*, which is B in the base, one tone higher than *Proslambanomenos*, or A.

This section therefore of the line, representing the sound A, must put an end to every doubt concerning the order of the scale, which may have arisen from the inverted application of the words *high* and *low*, constantly occurring in all the more ancient and authentic Greek writers on music.

And now having done with the scale, let us return to the tablature.

The multiplicity of notes in ancient Greek music must certainly have made it a very long and laborious study, even at a time when the art itself was in reality very simple. Hence it is not surprising to find that Plato (y), though he was unwilling that youth should bestow too much time upon music, allowed them to sacrifice three years to it, merely in learning the elements; and thought that he had reduced this study to its shortest period: but at the end of this time, a student could

(y) De Legib. lib. vii.

hardly be capable of naming all the notes, and of singing an air *at sight*, as we call it, in all keys and in all the genera, accompanying himself at the same time upon the lyre; much less could it be expected that he should be correct in every species of rhythm; that he should be master of taste and expression; or be able to compose a melody himself to a new lyric poem.

It was much more difficult to sing from the tablature, than to follow a voice or instrument, as it is far more perplexing to read the Chinese language than to speak it, on account of the great multiplicity of characters. However, if we could find Greek music now, we should be able to read it, contrary to the general opinion, which is, that the ancient notation is utterly lost. But though we can perhaps decypher it as exactly as the Greeks themselves could have done, yet to divide it into phrases, to accentuate, and to give it the original and true expression, are things, at present, impossible, and ever will remain so. For it is with the music of every country as with the language; to read it with the eye, and to give it utterance, are different things; and we can arrive at no greater certainty about the expression of a dead music, than the pronunciation of a dead language.

“It is astonishing however, says M. Burette (z), that the ancient Greeks, with all their genius, and in the course of so many ages as music was cultivated by them, never invented a shorter and more commodious way of expressing sounds in writing, than by sixteen hundred and twenty notes; nor ever thought of simplifying their tablature by making the same characters serve both for voices and instruments. It will perhaps be said that this distinction of tablature still subsists with us, for the lute, and for some other instruments; but this distinction is al-

(z) *Mem. de Litter.* tom. v. p. 182.

most abolished." (a) And yet, notwithstanding the great simplicity of our tablature, compared with that of the ancients, it must be owned that the modern characters are so numerous and difficult to understand, and retain in the memory, that a student in music has the voice and ear formed long before the eye is able to read them. And it may be affirmed, that the attention to the rules of music is more difficult than the execution.

It would be therefore curious to calculate the difficulties of ancient and modern music separately, that by a comparative view we might be enabled to determine which had the greater number.

With respect to those of notation, their being so much more numerous in the ancient music than the modern, is, perhaps, more imaginary than real.

For though the ancients had one hundred and twenty different characters for sound only, without including time, which characters, by changes in the modes and genera were multiplied to sixteen hundred and twenty; yet, if we compare these changes with such as are produced by our seven clefs, in which each note is subject to the accidents of flats and sharps, the memory will appear to be little less burthened by modern than by ancient musical notation.

Our compass is indeed much more extensive than that of the Greeks; but if we confine it to three octaves only, which was the extent of the whole range of modes in the great system of the ancients, we shall have seven changes for each of the twenty-two natural sounds, which amount in all to one hundred and fifty-four, without the accidents of flats and

(a) M. Burette has presented to the Academy of Inscriptions and *Belles Lettres* at Paris, a great number of well written memoirs upon almost every part of ancient music. When the enquiries of this learned academician seem successful, and satisfy my mind by the solution of diffi-

culties, I shall freely avail myself of his diligence and erudition; at other times, I shall either attempt to explain these difficulties myself, or shall frankly confess my ignorance and inability to furnish my readers with any satisfactory information concerning them.

sharps;

sharps; and these being nearly double that number, the whole will amount to about four hundred and fifty-five different representations of the semitones contained in three octaves, without enumerating either extreme sharps, or double flats.

Let us after this consider the difference of intonation occasioned by temperament, between the keys of C natural and C sharp with seven sharps; of D natural with two sharps, and of D flat with five flats; together with the different situation of the sounds in all our twenty-four keys; taking into the account at the same time the great number of our different characters for the duration of these sounds; and the simplicity of modern notation will not appear so much superior to the ancient as has been imagined.

But music is a modern art with us, as it is only a few centuries since the present system is supposed to have been invented; whereas ancient music flourished and was cultivated some thousand years before that period. It is therefore by no means surprising, that ours has not yet acquired every possible convenience of notation. However, notwithstanding the defects of modern music in some particulars, I may venture to affirm that it has arrived at a very great degree of perfection; and I appeal for the truth of this assertion to the daily experience of persons of good taste and refined ears.

In order to furnish my readers with a comparative view of the ancient and modern musical systems, I shall here insert a general diagram of both, constructed by the learned Meibomius, in his notes upon Euclid.

The Perfect System of the Moderns compared with the great and General System of the Ancients.

SECTION II.

Of the three Genera, Diatonic, Chromatic, and Enharmonic.

IN modern music the *Genera* are but two: *Diatonic* and *Chromatic*. These consist in the manner of arranging the tones and semitones of which melody is composed (a).

In ancient music, not only the tone was divided into two, as with us, but the semitone by a *Diesis*, or *Quarter-tone*. These three kinds of interval, the tone, semitone, and *Diesis*, constituted the difference of the three genera.

It has been already observed that the fourth was the constant boundary of sounds in the music of the ancients; and that its extremes, or highest and lowest sounds, were *stantes*, *immobiles*, or fixed. As the octave in modern music admits of no change, but is tuned as perfect as possible, so the fourth in ancient music was never allowed to deviate from perfection. The different genera therefore were characterised by the changes that were made in the two middle sounds of the tetrachord, which were styled *mobiles*, mutable. So that a *Genus* is defined by Euclid, the division and disposition of the tetrachord with respect to the intervals of the four sounds of which it is composed; and Pappus Alexandrinus says, that the *Genera* consisted only in different divisions of the tetrachord.

(a) When no more than two semitones occur in the course of an octave, the melody may properly be styled genuine *Diatonic*.

Indeed the *Chromatic* in use at present can hardly be compared with that of the ancients; for with them every accidental flat or sharp which led to a new mode or key, would have been called a change of *Genus*. With us, however, a mere change

of modulation, though it occasions a change of key, is not a change of *genus*; for while the sounds made use of in harmony and melody can be referred to any one key, the *Diatonic genus* is supposed to be preserved: it is only a regular succession of two or more *semitones*, ascending or descending, that constitutes modern *Chromatic*.

In the *Diatonic Genus*, the melody proceeded by a semitone, and two tones, as B C D E ; and it was from the succession of *two tones*, that this genus acquired the name of *Diatonic*. As the term is derived from *δια*, *by*, and *τονος*, *tone*; that is, passing from one tone to another; which in the Greek music was never done but in the diatonic genus.

The *Chromatic* proceeded by two successive semitones, and a hemiditone, or minor third, as B C C # E 

This modulation holding the middle place between the diatonic and enharmonic, has been supposed by Martianus Capella and Bryennius, to derive its name from *χρωμα*, *colour*; for as the gradations between black and white are called colours, so this genus being placed between the diatonic and enharmonic, is called *Chromatic*. M. Rousseau tells us, in his Dictionary, that this genus used to be written in *coloured notes*, but without giving any authority in support of this opinion.

The *enharmonic* tetrachord proceeded by two *quarter* tones, and a major third, B B x C E  This genus is often called by Aristoxenus, and others, simply *ἀρμονία*, *harmonia*, that is, well arranged and ordered.

Each of the three genera had some intervals in its scale that were peculiar and characteristic, and some that were in common with the other two. For instance, B C E F A Bb and d, were used in all the three genera, whereas DG were peculiar to the diatonic, C # and F # to the chromatic, and B x E x and A x to the enharmonic. A complete scale of each genus in modern notes will explain this matter better than words.

Diatonic,

Enhar. 

Hence it appears that the regular *diatonic* scale consisted, like the modern, of *tones* and *semitones*; the *chromatic*, of *semitones* and *minor thirds*; and the *enharmonic*, of *quarter-tones* and *major thirds*; distinctions which seem to have been long religiously observed in Greece; as the lyre was allowed but four strings to each tetrachord, and flutes were bored in a particular manner for each genus, in which no provision was made for producing the tones peculiar to the other two. However, in Euclid's time, we find that a *mixed genus*, as he calls it, had been admitted into practice. This author, the clearest and most satisfactory, as far as he goes, of all the ancients who have treated of music, has given us the following extraordinary scale of sounds used in the mixed genus:

Proslam. Mese

By which it appears that six strings are wanting to fill up the Diatessaron, or interval of a fourth, which, in any one of the three pure and uncompounded genera, had occasion but for four; and the octaves from proslambanomenos to mese, which in the pure diatonic, chromatic, or enharmonic, had but eight

E. 4 strings,

strings, in the mixed genus must have been supplied with twelve. So that a remark made by Perrault (b) concerning the superiority of the modern scale over the ancient, in having a greater number of sounds in the compass of a fourth, is not so much in our favour as it at first appears; the number of notes being equal in both: with this difference, that the ancients had no G sharp, or E flat, and the moderns have no *Diesis*, or interval of a quarter-tone, between B C, E F, or A and B b.

Aristoxenus tells us that the division and bounds of the genera were not accurately fixed till his time; and Aristides Quintilianus speaks of several genera, or species of intervals, long out of use, but which were of the highest antiquity; yet so wild and irregular, that after the art of music was brought to a greater degree of perfection, and the laws of the three principal genera were settled, they had been disused by the best musicians. The same author asserts, that it is of these barbarous divisions of the scale, or old *Harmonies*, as they were called, and not the common modes of the same names, that Plato speaks in his Republic, where he admits some of them, and rejects others.

The ancients attributed peculiar effects to each genus, and speak of many characteristic distinctions of genera, which now appear to be wholly fanciful and imaginary. These, if they ever had existence, were, perhaps, destroyed by modern harmony. Aristides Quintilianus, p. 111, tells us, that

The *diatonic* is manly, and austere;

The *chromatic* sweet, and pathetic; and

The *enharmonic* animating, and mild.

Vitruvius, speaking of the *enharmonic*, says, that it is in a particular manner *grave* and *majestic* (c).

(b) *Essais Physiques*, tom. ii.

(c) *Cantus ejus maxime gravem, et egregiam habet auctoritatem.*

Perhaps the idea of a major-key, which the *enharmonic ditone* must impress upon the ear, may have contributed to the notion of music in that genus being *animating*; but how it could be at the same time *grave* and *soothing*, *animating* and

mild, is not easy to conceive. This genus was never known to the Romans, having been lost before they attempted the polite arts; and Aristides Quintilianus, who lived after Vitruvius, could have known its effects only from tradition. He attributes to it very opposite qualities: *δυναστεύον δ' ἐστὶ τὸ καὶ ἡπιον*; which Meibomius has rendered

And Plutarch, in his first Essay against Colotes the Epicurean, asks, "Why does the chromatic genus melt and dissolve, and the enharmonic brace the nerves, and compose the mind, after being disturbed?"

Aristides Quintilianus, in another place (*d*), says of the genera, that the *diatonic* is the most natural, because all who have ears, though uninstructed in music, are capable of singing it.

The *chromatic* is *more* (*e*) artificial, for it can be sung only by such as are adepts in music.

The *enharmonic* is the *most* refined and difficult of all, and has been received and practised only by the greatest artists.

The ancients have related such wonders of this long-lost, and long-lamented genus, that a particular discussion seems necessary here concerning its existence and properties. There is nothing so difficult to the conception of modern musicians, as that pleasing effects should ever have been produced by intervals, which they themselves are unable to form, and to which, if they could form and introduce them into *melody*, no *harmony* could be given, that would be agreeable to the ear, or the rules of counterpoint.

And there are so many inconsistencies in the accounts of ancient authors concerning this kind of music, that nothing but an hypothesis can reconcile them to probability. With the permission, therefore, of my readers, I shall venture to throw together my conjectures upon this subject in that form; assuring them, at the same time, that it is the only hypothesis which I intend to hazard in the course of this work.

dered, *excitandi autem vim habet, et est mansuetum*: literally, it has the power of animating, and is soothing. In looking, however, for a solution of this difficulty in his notes, I find it to be his opinion that the passage is spurious.

(*d*) P. 19. Edit. Meibom.

(*e*) A learned friend has proposed a natural and easy correction of the text in this passage, which, as it stands in Meibomius, is scarce intelligible. It consists only in a transposition of the terminations of the two last characteristic adjectives.

Old Enharmonic.

FROM several passages in ancient authors who have written upon music, it appears that there were two kinds of *enharmonic* melodies in use among the Greeks; in the most ancient of which we do not find that the *Diesis*, or *Quarter-tone*, ever had admission. This I shall distinguish, in the course of the following essay, by the title of *Old Enharmonic*. The other, in which the semitone was divided, and which seems to have been a refinement upon this, I shall call *New Enharmonic*.

“The number of *four strings*, from which the tetrachord derived its name, says M. Rousseau (a), was so far from being essential, that we find tetrachords in ancient music which had only *three*. Such, for some time, were the *enharmonic* tetrachords.” He mentions the same circumstance in speaking of the invention of the *enharmonic genus* by Olympus (b).

Now, as the only source of these assertions seems to be a passage in Plutarch’s Dialogue on Music, which is really curious, I shall here insert as faithful a translation of it as possible.

“Olympus, as Aristoxenus informs us (c), is thought by musicians to have invented the *enharmonic genus*: for before his time, all was *diatonic* and *chromatic*. He is supposed to have hit upon the invention *in some such way as this*: while he was preluding in the diatonic genus, it is imagined that passing frequently in his melody from *Paramese*, and from *Mese*, to *Parhypate Mese*, skipping over the *Lichanos*, he observed the beauty of the effect: το καλλος τε ηθες, ef-

(a) Dict. de Mus. Art. TETRACHORDE.

(b) Art. ENHARMONIQUE.

(c) In a work that is not extant.

“*fect*,”

“ *fect, manner, or expression*, and forming then the whole sys-
 “ tem (of the octachord or heptachord, as I understand it) ac-
 “ cording to this analogy (*d*), and being struck with it, he
 “ adopted, and composed in it, in the Dorian mode, with-
 “ out touching any string *peculiar* to the diatonic, to the
 “ chromatic, or indeed to the *enharmonic*; and such were his
 “ *enharmonic melodies*. For the *first* of these they reckon to
 “ have been the *nome* or melody called *Spondean*; in which
 “ melody *none of the divisions* of the tetrachord (i. e. the ge-
 “ nera) *show their peculiar characters* (*e*).” (*****)

“ For the *close enharmonic*, *εναρμονιον πυκνον*, now in use (*f*), seems
 “ not to have been of this musician’s invention; as any one
 “ may easily be convinced, that attends to a performer on the
 “ flute, who plays in the old-fashioned style: for such players
 “ chuse to make the semitone an *uncompounded interval*. Such
 “ then were the *original enharmonic* melodies; but, after-
 “ wards, the *semitone was divided*, in the Lydian, and Phry-
 “ gian modes. Thus it appears that Olympus improved the
 “ art, by introducing a manner that was new and unknown to
 “ former musicians, and was the great leader and author of
 “ the *genuine* and beautiful *Greek music*.”

M. Burette, who has published the whole Dialogue of Plutarch, with a translation, and an ample commentary, in the Memoirs of the Academy of Inscriptions and Belles Letters, seems unable to account for Olympus touching *no sound peculiar* to any one of the three genera: however, nothing in the Dialogue is clearer, than that Plutarch means to say that the three notes used by Olympus in each tetrachord were common

(*d*) That is, missing the third sound, *ascending*, in every tetrachord which he used. What kind of melody would be produced from such a mutilated scale, will be shewn further on.

(*e*) This is, plainly, *enharmonic*, without the *quarter-tone*.—Here a long unintelligible parenthesis is omitted.

(*f*) That is, *with* the *Dieze*, or true enharmonic quarter-tone.

to *all* the genera : he neither introduced *Lichanos diatonos*, which is peculiar to the *diatonic* ; nor *Lichanos chromaticos* ; nor even, says Plutarch, the sound *now* essential to the *enharmonic* ; that is, neither D natural, C sharp, nor the enharmonic B $\times$.

But M. Burette confounds the *old* enharmonic with the *new*. He will have the *spondean* melody to have been in the *Phrygian mode* mentioned by Aristides Quintilianus, p. 21 ; though in that the *Diesis* is admitted ; and Plutarch says expressly that this old melody did *not* admit any *characteristics* of the genera. And all this he does merely to explain an unintelligible parenthesis, which is better omitted, unless some sense could be given to it that would not militate with the rest of the text, which is clear and intelligible without it.

M. Burette must be allowed the merit of great diligence and learning ; but he does not seem always to have been possessed of an equal share of sagacity, or with courage sufficient to confess himself unable to expound inexplicable passages in his author. He never sees a difficulty ; he explains all. Hence, amidst great erudition, and knowledge of antiquity, there are a thousand unintelligible explanations in his notes upon Plutarch. *En écrivant, said Fontenelle, j'ai toujours tâché de m'entendre.*—An admirable rule ! which every writer ought to adopt.

Thus much is said, not with a view to depreciate the merit of M. Burette, to whom almost all late writers on music have had great obligations, and whose labours have been of singular service to myself, among the rest ; but to shew how few authors are to be always followed implicitly, or read without precaution.

The passage of Plutarch relative to *Old Enharmonic* is rendered fairly, and as near *literally* as possible. It must be remembered that the Dorian mode, in which Olympus is said to have

have composed his melodies, answers to our key of D natural. Now, in the tetrachords of this mode, if we omit every third found, we shall have the following melody, whether Olympus had two conjunct, or two disjunct tetrachords, for his system.

Both these scales contain only the intervals to be found in the following octave.

Now this is exactly the old Scots scale in the minor key; a circumstance which must strike every one who reads the passage of Plutarch, that is at all acquainted with the intervals of the Greek scale, and with Scots music.

The abbé Rouffier, in the second article of his *Memoire sur la Musique des Anciens*, speaks of an old Chinese scale of six notes, mentioned by Rameau. It is preserved in numbers; and according to Rameau's interpretation, who applies the numbers to ascending fifths, they produce the very identical Scots scale, adding only a note to complete the octave. C, D, E, G, A, (c). The abbé contends that Rameau is wrong; and indeed the argument he uses against him concerning lengths and vibrations, Sect. XXI. does seem plausible; but the abbé had the *interest of a system* to bias him in determining this matter, which Rameau had not. It must be confessed, at least, that Rameau's interpretation forms the more *probable* and natural scale: because,

cause, like the Scots, and the *Old Enharmonic*, it leaves out the *fourth* and *seventh* of the key. The only specimen of Chinese music which M. Rousseau has given in his Dictionary, from Du Halde, seems to confirm Rameau's scale: for except in one passage, at the beginning of the third bar, where F natural comes in so awkwardly, as to raise a suspicion that it has been inserted by a mistake of the engraver, the *fourth* and *seventh* of the key are scrupulously missed throughout; and nothing can be more Scottish than the whole cast of the air.

All the specimens that I have been able to collect of Chinese melody, several of which will be given among the examples of national music in the second volume, are of this cast. Indeed they must be so, in compliance with the construction of their instruments, in which there are *no semitones*. One of these I saw when I was last at Paris: it was in the possession of the abbé Arnaud of the French Academy, and was a kind of *Sticcado*, consisting of bars of wood of different lengths, as sonorous as if they had been of metal: these were placed across a hollow vessel resembling the hulk of a ship. The compass was two octaves, and the intervals were arranged in the following order:

Now no music can be composed from such a scale that will not remind us of the melody of Scotland, which will hereafter be proved of a much higher antiquity than has generally been imagined.

With respect to the music of China, Dr. Lind, an excellent judge of the subject, and philosophically curious about every thing that relates to it, after residing several years in that country, assured me that all the melodies he had heard there, bore a strong resemblance to the *old Scots tunes*.

But

But to return to the *old* enharmonic of Olympus. What degree of authority is to be allowed to the passage in Plutarch concerning the manner of its invention I will not pretend to determine. No other author whatever, that I have been able to find, tells this story; though many besides Aristoxenus, from whence Plutarch quotes the account, have attributed to Olympus the invention of the enharmonic genus. But if there had been two sorts of enharmonic, an ancient and a modern, it may seem somewhat strange that not *one* of the many authors who treat of the genera, should say a word to this purpose. We may observe, however, that it came more in the way of an *historical* than a *technical* treatise; and this Dialogue of Plutarch is the only historical tract upon music that is come down to us (*g*). Indeed the account is not given in such terms as would make us suppose it merely the hypothesis of an individual; but rather an old traditional opinion current among all the musicians.

But the *Lichanos*, or third sound from the bottom of a tetrachord, seems not to have been the only one which the old Grecian harpers and pipers were fond of missing in their melodies. Plutarch observes (*h*), that in what he calls the *σπονδειακῶ, σπονδειαζοντι τροπῶ*, they abstained from the use of *Trite*, or third sound from the top of a tetrachord, skipping over which, ascending, they used to “*διαβιβάζειν το μελος*,”

i. e. “*carry over the melody to Paranete*.”

or

I must just observe that the octave produced by missing the *third note* downwards, in two tetrachords, as the second was missed in the enharmonic of Olympus, gives exactly the Chi-

(*g*) The book of Aristoxenus, which Plutarch quotes as his authority, was, according to M. Burette, *historical*. Mem. de Lit. tom. x. p. 309. (*h*) Ib. 136.

nese scale of the abbé Rouffier (*i*), and that of the instrument in the possession of the abbé Arnaud.

Now what is *τροπος σπονδειαζων*, the spondean mode or manner? It looks as if it was the same thing as the *spondean melody*, that is, the *libation tune* of Olympus, one of those which were still extant in Plutarch's time; for he says "the Greeks now use them upon the festivals."

Plutarch talks likewise of the old masters omitting *Nete*, the highest sound of a tetrachord: not through ignorance, says he; for they used both that and *Trite* in their instrumental music; but in their vocal melody, "it would have been a disgrace to a musician to have used the *Nete*;" perhaps from the impropriety of straining the voice in the execution of a note that was too high for its natural compass, *Trite* being the last and highest note of the scale in all the modes.

The perplexity occasioned by the change of names according to the gradual extension of the system, and the uncertainty what system is really here understood, whether heptachord or octachord, disjunct or conjunct, throws undoubtedly a thick fog over all this account in Plutarch's Dialogue. However, I still think it by far the most curious passage about the ancient music that I have ever met with: as it is the *only* one that tends to any thing *like* a description of what old Greek melody was. All the rules for it in Aristoxenus furnish not a single idea. The accounts of the *genera* do indeed give us an idea of the intervals in each; yet it is an idea that we know not what to do with. But when we hear of constantly skipping notes in a diatonic scale, we really do acquire *some* idea, however general.

There is nothing that gives a stronger character, or *ἦθος*, as the Greeks called it, to a melody, than the constant or *usual* omission of particular notes in the scale. Suppose it uncertain from this passage *what* notes were missed; yet the general fact,

(i) Vide p. 24, of the Mem.

that these old musicians, composers of the ancient genuine Greek music, which Plato, Aristotle, and all the writers speak of as so excellent and superior to the more modern, *did* delight to break the diatonic progression, to διαβιβάζειν, or *stride* over certain notes in the melody, seems pretty clear: and this surely renders it highly probable, that the cast of the old national Greek airs was much like that of the old Scots music. If they had melodies where the *Lichanos* was omitted, they must have been *very* like; but even the *Trite* omitted gives still a

strong Scottish tincture to an air ; and I

believe, in general, that the omission of any notes in the scale, producing skips of *thirds*, will have much the same effect on the ear.

The Chinese scale, take it which way we will, is certainly very Scottish. It is not my intention to insinuate by this that the one nation had its music from the other, or that either was obliged to ancient Greece for its melody; though there is a strong resemblance in all three. The similarity however, at least proves them all to be more natural than they at first seem to be, as well as more ancient. The Chinese are extremely tenacious of old customs, and equally enemies to innovation with the ancient Ægyptians, which favours the idea of the high antiquity of this simple music; and as there is reason to believe it very like that of the most ancient Greek melodies, it is not difficult to suppose it to be a species of music that is natural to a people of simple manners during the infancy of civilization and arts among them. In this and in other perplexing points, it is my sincere wish to leave the mind of my reader something, at least, *like* an idea to *fasten* upon; and what conveys the fullest conviction to my own mind, I shall, in general, adhere to, without unhinging all belief, by quoting a crowd of heterogeneous opinions upon

the same subject. Besides, if I wished to give all the chaos of commentatorship, I could not, for want of room.

I shall therefore proceed to speak of the more artful and

Modern Enharmonic.

THE account already given of the invention of Olympus seems not only to furnish some idea of the *old* Greek melody, but helps, I think, to make the *true* enharmonic with the *Diesis*, somewhat less inconceivable than it would be without this idea of its origin.

If we take the enharmonic tetrachord  by itself, it appears wholly strange and unaccountable; not only from the divided semitone, but from the skip of a *Ditone*, which the melody was confined to in its progress, after the two *Dieses* in *ascending*, or before them, in *descending*. M. Burette accounts for this rule, from the limited number of strings: "The tetrachord had but four strings, says he; three of these were occupied by the semitone and its division: it was therefore matter of necessity to skip to the upper note of the tetrachord, a stable sound, which could not be dispensed with." This may, of necessity, have been the case during the early ages of music in Greece; but afterwards the custom must have been continued through choice, and in compliance with venerable and established melodies used in religious ceremonies, which admitted of no change for many ages. And it is easy to conceive that after a nation has been long accustomed to the omission of certain intervals in their melodies, they will not soon be reconciled to the use of them. This is the case in the music of Scotland, where no tune is thought to be genuine, unless certain intervals are omitted.

But

But the reason assigned by M. Burette for the omission of certain sounds in the chromatic and enharmonic genera, for want of a sufficient number of strings in the *Lyre*, is invalidated by a passage in Aristoxenus, p. 28, where he lays down the same rule for the *voice*, and where the lyre is out of the question, as he is expressly considering the *natural vocal succession*. Indeed the voice and lyre were alternately subservient to each other. In very early times the lyre seems to have governed the voice, and to have regulated its intervals and compass by the small number of strings with which it was furnished; though, afterwards, the extent of the voice long bounded the scale of instruments by which it was accompanied.

The story of Olympus, however, accounts reasonably for the continuance of wide intervals in the enharmonic genus; the first scale of which being, according to Plutarch, this:

was certainly a natural and pleasing melody, though of an antique and melancholy cast. Now according to this relation, which I firmly think I believe, for

l'uom suole

Dar facile credenza à quel che vuole,

the *Diesis* was, at first, inserted into melodies of this kind, as a sort of accidental *grace*, though in later times it became essential to the genus (*k*). Even at the period when Plutarch wrote his Dialogue, we find there were old-fashioned players on the flute, who omitted the *division* of the semitone, in playing music that was still reckoned *enharmonic*; the observation would otherwise have no meaning.

How this *quarter-tone* could be managed so as to be rendered pleasing, still remains a mystery; yet the *difficulty* of splitting

(*k*) The musical reader must recollect the origin of several fashionable licences and innovations in modern music, which

though used and tolerated at first only as notes of taste and embellishment, are now become essential to good melody.

a semitone into two halves, or even dividing it into more minute intervals, is less, perhaps, than has been imagined. When it is practised by a capital finger, or a good performer on the violin, or hautbois, at a pause, how wide it seems!

When the *Diesis* is thus considered as a grace, or a note of taste, it renders the genus not only conceivable, but practicable; for then the *natural outline*  of the *Old Enharmonic* still remains in full force upon the ear.

But there are other difficulties concerning the *enharmonic*, which this account, in a great measure, clears up. Plutarch expressly says, p. 162, that among the old artists the *enharmonic* was solely, or almost solely, in use, and that “*they gave themselves no trouble about diatonic or chromatic.*” And Aristoxenus says the same: his expression is, that “*they had no idea of them.*” M. Burette would confine this preference to theorists and writers on the subject; but nothing can be clearer than that there was an age when the *enharmonic*, *some kind of enharmonic*, at least, was practically preferred to the other genera; and it is more than probable that this age was the early time of music in Greece, when the art was confessedly in its most *simple* state; when music was, according to all the descriptions of Plato, Plutarch, and others, solemn, majestic, and used for no other than solemn and majestic purposes.

Plutarch expressly says, that the *ancients* were *attached* to the *enharmonic*, *δια σεμνοτητα*, that is, on “*account of its gravity.*” The whole drift of his Dialogue is to apologize for the old musicians, the very practisers of the *enharmonic*, upon the score of its simplicity, and to shew that it proceeded not from ignorance, but from choice.

The *chromatic*, agreeably to this idea, is every where spoken of as a more refined and new-fangled thing. Plutarch, p. 140, mentions a number of old musicians, who *purposely abstained* from the *chromatic*, as if it was a wicked modern innovation.

It is mentioned as such in the curious decree of the Spartans against Timotheus; nay, it is even said, in the copy of that decree, at the end of the Oxford Aratus, that "he substituted *his chromatic* instead of *their enharmonic*;" though some translators have omitted these words, perhaps because they could not conceive how the enharmonic could possibly be more simple music. A passage in Aristoxenus, p. 23, seems to admit the same construction; where, speaking of the innovators of his time, and their tuning the enharmonic, which was then expiring, like the chromatic, he says, the reason was, that they always wanted to *γλυκαίνειν*, that is, *to put more sugar in their music*.

How can we reconcile all this with the common *genealogy* of the genera, 1. diatonic, 2. chromatic, 3. enharmonic? Or with the general idea of the enharmonic being the *last* and almost *impracticable* refinement of the art?

But if, as the account of Plutarch says, the simple melody of Olympus was called enharmonic, it is at least very natural to suspect that all this may be meant of *that* enharmonic, which was certainly more simple than the *chromatic*, and even than the *strict diatonic*, by conjoint degrees, as the fourth and seventh, the two notes of the scale that are of the most difficult intonation, were not admitted into its melodies. The fourth is so awkward an interval that it is not only difficult to sound it correctly upon wind instruments, but such as I have observed few *natural* unguided fingers are able to sing in tune. The same may be said of the seventh, which, descending, the ear rather requires to be sharp: it seems only for the sake of the sixth that it is made flat in minor-keys; on which account Rameau considers it merely as a *passing-note*, serving only to lead more smoothly to the sixth, and which should not, properly, be taken account of in the *fundamental base*.

This

This *suspicion*, which is all I shall venture to call it, naturally therefore presents itself: not that I would willingly lean harder upon it than it will bear. All the writers agree that the diatonic and chromatic existed *before* the enharmonic; but by the expressions they use, and by talking of φυσικῆς, *nature* (*m*), they seem to mean the new and *difficult* enharmonic, and rather to speak according to what they thought *naturally must* have been, than upon any *historical* certainty concerning a matter so remote, even from the oldest writer on music, Aristoxenus.

However, setting *this* suspicion aside, the account given by Plutarch seems still greatly to help to clear up the mystery; because it shews us, that even after the introduction of the *Diesis*, the enharmonic, by preserving the old Olympic form of the melody, might still be regarded as more pleasing, natural, and simple, than the other genera; at least than the *chromatic*, which, though its *Diesis*, or semitone, be in itself easier to form and to sing than the other, is yet, taking in all circumstances, more unnatural, more distracting to the ear, more complicated as to the fundamental base, which guides the ear of modern musicians, than the *enharmonic*; the σεμνοτης, or *gravity*, of which, and the *simplicity implied* in it, must have consisted, not in the *divided* semitone, which some musicians, even in Plutarch's time, we see, omitted, but in the old favourite *Scottish melody*, which still subsisted: the quarter-tone that had crept into it being probably regarded as an accidental embellishment of the air, which upon the whole was to the ear what Plutarch, p. 136, calls τριχορδον και απλυν; that is, "*three-stringed, and simple*." At least it seems more easy to conceive the execution of the enharmonic possible *as mere melody*, than the ancient chromatic, where harmony seems wanting to guide the

(*m*) See Aristox. p. 19, and Plut. p. 138.

ear, and which has the appearance of being both in a major and minor key at the same time :

And none of these sounds can easily be reduced to mere notes of taste, all are fundamentally consequential to the harmony, and leave no natural *outline* of melody for the ear to seize, like the *enharmonic*.

S E C T I O N III.

Of the Modes.

A *Mode*, in ancient music, was equivalent to a *Key*, in the modern (*a*). And Bryennius says in express terms, page 481 (*b*), that the *tones* or *modes* differ from each other in nothing else but the being situated in a higher or lower pitch of the voice or instrument ; which is but saying that the modes differed from each other only by transposition.

Aristoxenus admitted of but thirteen modes, though subsequent musicians allowed of fifteen ; and this is the number of which Alypius has given us a diagram in all the three genera.

These are placed by every musical writer, anterior to Ptolemy, at the distance of half a tone from each other. And as it is generally agreed that the lowest of the Greek modes, which was called *Hypodorian*, had its *proslambanomenos*, or lowest sound, in that part of the modern scale which is expressed by A upon the first space in the base, the following table will convey an idea to the musical reader of the comparative situation of the rest.

(*a*) *Μῶδος*, *τονος*, *τροπος*, *mode*, *tone*, and *key*, are synonymous terms, both in ancient and modern music.

(*b*) Edit. Wallis.

TABLE

TABLE of the MODES.

	Proflam.				
Grave Modes.					
	Hypodorian, or Locrian.	Hypoionian, or Grave Phrygian.	Hypophrygian.	Hypoaeolian, or Grave Hypolydian.	Hypolydian.
Middle and original Modes.					
	Dorian.	Ionian or Iastian.	Phrygian.	Aeolian.	Lydian.
Acute.					
	Hyperdorian, or Mixolydian.	Hyperionian, or Hyperionian.	Hyperphrygian, or Hypermixolydian.	Hyperaeolian.	Hyperlydian.

It was with reason that Aristoxenus refused admission to the two last modes, which are only octaves of the second and third, as the thirteenth is of the first.

A scale of two octaves being allowed to each of these modes, the whole extent and compass of the fifteen was from *Proflambanomenos* in the Hypodorian mode, to *Nete hyperbolæon* in the hyperlydian, three octaves and a tone, from our A in the

base, to B in the treble

As the keys of C and A natural are representatives of all other keys in modern music, the scales which have been given, page 31, to exemplify the *Genera*, will shew the intervals of the Hypodorian mode, and serve as types of all other modes admitted into the music of the ancient Greeks.

Pliny

Pliny tells us that the three first and original modes were the *Phrygian*, *Dorian*, and *Lydian*; so named after the several countries where they were invented and chiefly used; though Heraclides of Pontus asserts that the *Æolian*, *Dorian*, and *Ionian*, were of the most ancient and general use among the first inhabitants of Greece. However that may have been, it seems probable that the five modes mentioned by these two authors were in use long before the rest, which, in process of time, as the musical scale was extended by new improvements and new instruments, were placed above and below them, and distinguished by the prepositions ὑπο and ὑπερ, *under* and *upper*.

There is a passage in Aristides Quintilianus, p. 23, which seems to point out something like *connection* and *relation* between the five original modes, and those above and below them. He says, after having enumerated the fifteen modes, "By this means, *each mode* has βαρυτητα, και μεσοτητα, και οξύτητα, its *bottom*, its *middle*, and its *top*, or its *grave*, *mean*, and *acute*."

This seems to imply that the three modes of *DORIAN*, *Hypodorian*, and *Hyperdorian*, for instance, were considered, in a manner, as one: and as if the two modes belonging to each of the five middle ones, a fourth above, and a fourth below, were regarded as necessary *adjuncts*, without which they were not complete.

Pursuing this idea, if we place the five most ancient and original modes in the middle, between the lower and the higher modes of the same name, they will have very much the appearance of our relative keys in modern music.

Fourth below.	Principal.	Fourth above.
Hypodorian,	DORIAN,	Hyperdorian.
Hypoiaastian,	IASTIAN,	Hyperiaastian.
Hypophrygian,	PHRYGIAN,	{ Hyperphrygian, or Hypomixolydian.
Hypoæolian,	ÆOLIAN,	Hyperæolian.
Hypolydian,	LYDIAN,	Hyperlydian.

These answer to the following keys in present use :

A,	D,	G.
Bb,	Eb,	Ab.
B,	E,	A.
C,	F,	Bb.
C#,	F#,	B.

And amount to the same thing as our fifth above, and fifth below a key. Indeed if the ears of the Greeks were not totally different from ours, these must have been the first and most natural modulations.

It is worth observing that Alypius, though the modes in his diagrams are placed at the distance only of half a tone from each other, yet, in giving the notation of each, he ranks them in the following order, in all the genera.

LYDIAN,	Hypolydian,	Hyperlydian.
ÆOLIAN,	Hypoæolian,	Hyperæolian.
PHRYGIAN,	Hypophrygian,	Hyperphrygian.
IASTIAN,	Hypoiaastian,	Hyperiaastian.
DORIAN,	Hypodorian,	Hyperdorian.

It is very remarkable that all the ancient modes or keys were *minor*, which must have given a melancholy cast to their melody in general; and however strange this may appear, it is as certain as any point concerning ancient music can be, that no provision was made for a major-key in any of the ancient treatises or systems that are come down to us.

But one nation may be prejudiced, by long habit, to a major scale, another to a minor; as well as to certain skips in their melody, like the Scots; and to a certain measure, like the Poles.

This is not the place to reason upon the subject; but taking the fact for granted, it makes the relations of the modes, by fourths, the more natural. For Tartini's observation seems true, that the change into the fourth of a minor key is much more agreeable than into that of a major. Indeed the ancients could scarce have any other change consistently with their rule of modulation, which says, that the transition should be by *consonant* intervals. Now the octave producing no change, there remains only the fourth or fifth above or below; for the third was a *dissonant* interval in their theory.

It is some satisfaction, however, to find the Greek rules for modulation, their *change*, *κατα τονον*, so nearly correspond with our own. When Ptolemy, page 131 (*m*), recommends the taking those keys first that are at *consonant distances*, and tells us that the transition from one tone to another *next* to it, is disagreeable, it accords very well with our modern doctrine and practice, and with Rameau's rule for a *relative succession* of chords. Indeed there is a passage in Euclid, that is still less equivocal: he says, page 21, speaking of *modulation*, "Transitions are made, some by consonant, and some by dissonant intervals; and of these some are more, and some less, melodious. The most melodious are those in which there is *most connection*; where the two modes have *most in common*: those are less melodious, which have less participation." He goes on to explain in what this *communio* consists; the text is obscure; but I think a meaning is discoverable, which has escaped Meibomius, both in translating, and in commenting, the passage.

Every writer on the subject of music, till the time of Ptolemy, regarded the fourth as the *first concord*, and dividing all the fifteen modes into tetrachords, regulated the scale in all

(*m*) Cap. 9. lib. ii.

the genera, by that interval. But Ptolemy, about the year one hundred and thirty of the Christian æra, and four hundred and fifty years from the time in which Aristoxenus flourished, proposed a new doctrine and reform in the ancient musical system; in which he reduced the fifteen modes to seven, and made the diapason, or octave, the regulator of his scales, not by abandoning the tetrachords, for he regulated the genera by those intervals in the same manner as his predecessors; but in his reduction of the modes he kept them within the bounds of the *octave*, and made their number equal to the *species of diapason*. And though he retained the ancient names of Dorian, Hypodorian, Lydian, Hypolydian, Phrygian, Hypophrygian, and Mixolydian, he totally changed their places in the system.

Lemma Rossi, Bontempi, and most of the writers who have mentioned the modes of Ptolemy, have supposed them to have consisted only in different species of octaves, in one key (*n*). But Dr. Wallis, who has translated into Latin the Harmonics of Ptolemy, and reduced his modes to modern notes, makes them all consist of transpositions of the *Dorian* mode, which Ptolemy calls the first, and which Dr. Wallis has written in the minor key of A natural, placing it in that part of the

(*n*) Euclid, and Gaudentius after him, have given seven species of octave in one key, which however they call by the names of seven of the modes.

Melbomius, in his notes on Euclid, p. 59. has given these scales in letters.

scale

scale where, among the fifteen modes, the *Hypodorian* used to stand.

Mese

1 2 3 4

Dorian. Hypodor. Phrygian. Hypophryg.
1 5 6 7

Bacchius senior places two of these modes, the Hypolydian and the Lydian, half a tone higher than Dr. Wallis, who seems to have mistaken their places. The Mixolydian he makes the highest of all, then places the Lydian *half a tone below* it, the Phrygian a tone below the Lydian, the Dorian a tone below the Phrygian, the Hypolydian *half a tone below* the Dorian, the Hypophrygian a tone lower, and the Hypodorian, the lowest of all, a note below the Hypophrygian (o).

By the disposition of Ptolemy's modes, it seems as if his design had been to establish a more easy and obvious connection and relation between them, than had hitherto been practised; for though the modes placed above and below the five principal ones might have been originally intended as their adjuncts, yet from the multiplicity and promiscuous arrangement of the modes at the distance only of a semitone above each other, their intimate relation and union had not been sufficiently attended to. He therefore included all his seven modes in the compass of an octave, "making, says Dr. Wallis, the Dorian the center or mean; after which he placed the Mixolydian a fourth above the Dorian; the Hypolydian a fifth below the Mixolydian; and the Lydian a fourth higher than the Hypolydian. Then, beginning again at the Dorian, he placed the Hypo-

(o) Introd. Artis Musicae, Edit. Meibom. p. 12.

dorian a fourth below it; the Phrygian a fifth above the Hypodorian, and the Hypophrygian a fourth below that (*p*)". Now if each of these modes produced seven species of diapason or octave, the seven modes of Ptolemy would furnish seven times seven, or forty-nine species of octave; not indeed all of different kinds, but of different pitch in the scale. To each of these modes he assigned the compass of a disdiapason, or double octave, as was the practice in the ancient modes; with this difference, that the first and characteristic sound in the fifteen modes was *Proslambanomenos*, but in those of Ptolemy *Mese* is made the key note, and the center of the scale; which may be supposed to extend an octave above, and an octave below the sound given in the table.

Such was the general opinion concerning the modes of Ptolemy, till Sir Francis Haskins Eyles Stiles formed an ingenious hypothesis concerning them, which was read to the Royal Society in 1759, and afterwards published in the Philosophical Transactions, vol. LI. part ii. for 1760, under this title: *An Explanation of the Modes or Tones in the ancient Græcian Music*. Sir Francis in this Dissertation endeavours to prove, that the ancients had a *double doctrine* of the modes, an *harmonic* and a *musical* doctrine. By *harmonic* he means the natural tones in the scale of the great or general system; and by the *musical* doctrine is implied *melody*, or the changes according to different keys or species of diapason.

He explains this in a diagram, taking his pitch at *Hypate Mese*, our E in the base, and makes all his mutations between that sound and its octave, *Nete Diezeugmenon*, preferably to any other part of the Greek scale, as it is the only boundary, within the limits of which the proper species of all

(*p*) But this round-about order of the modes is not that of Ptolemy; for in his tenth book, chap. ii. the title of which is, *How to adjust accurately the Distances of the Modes*, he gives his method of taking

them by fourths and fifths in the only direct and warrantable way in which they can be taken, according to modern modulation, by beginning at the Mixolydian: D, A, E, B, F#, C#, G#.

the

the seven modes can be given, without altering the position of the *Mese*, or characteristic note, which would disturb the harmonic doctrine. And this is the diapason chosen by Ptolemy, cap. 2. lib. ii. for the purpose of exhibiting his divisions of the several species.

DIAGRAM of the Species of Diapason in the seven Modes admitted by Ptolemy, according to the Doctrine of Sir Francis Haskins Eyles Stiles.

Mixolydian.		Key of D minor.

Phrygian.		B
Dorian.		A
Hypolydian.		G #
Hypophrygian.		F #
Hypodorian.		E

Sir Francis gives quotations from the ancient Greek writers in confirmation of his doctrine, several of which indeed seem favourable to it; at least they imply a difference on some occasions from the intervals in the natural or great system: this difference

ence he imagines to be expressed by the term μεταβολη, *mutation* (q).

He very truly asserts, that no transposition of the same melody into a higher or lower key, can have so powerful an effect as a change in the modulation, or succession of intervals; and observes, that modern music has but two considerable changes in the same key; these are from major to minor, and from minor to major. The first seems reserved for pathetic effects: here he instances Purcel's happy change of modulation in his *Mad Bess*, at the words, "Cold and hungry am I grown (r)."

Sir Francis assigns a greater antiquity to the *musical* doctrine, than to the *harmonic*, and refers the effects of the modes in

(q) See Sect. IV.

(r)

Poor Bess will re-turn to the place whence she came, Since the world is so

mad she can hope for no cure, For love's grown a bubble, a shadow, a

name, Which fools do ad-mire and wise men en-dure. Cold & hungry am I grown

&c.

early

early times to the former. “ We find, says he, in Plutarch, “ Pliny, and other writers, the invention of particular modes “ ascribed to particular musicians; which may be accounted “ for, on the supposition that the modes were so many different species of diapason, since it requires great art and “ skill to introduce agreeable melodies to which the ear has “ not been accustomed: but the taking the same melody at a “ different pitch, is a variety, for which the inventor would “ hardly have had his name so carefully transmitted to posterity (s).”

Meibomius however was certainly of opinion, that the difference in the modes, upon which all their effects depended, consisted only in the tension, or acuteness and gravity of the whole system. And Dr. Wallis saw still less of this doctrine than Meibomius, “ though he has rightly, says Sir Francis, explained the species of diapason, as they lay between *Hypate Meson* and *Nete Diezeugmenon*; but this interpretation he regards as singular in his author, and draws no consequences from it.”

The ascertaining the figure of the earth, by measuring a degree near the pole and under the line, introduced a new geography; in the same manner the hypothesis of Sir Francis Eyles Stiles will overset all former theories and conjectures on the subject of the ancient musical modes, and oblige those whom he convinces of the truth of his doctrine, and who had before reconciled themselves to received opinions on the subject, to confess their errors and ignorance, and to begin the study of ancient music anew.

It is not, however, certain that Ptolemy's doctrine was immediately adopted by all the musicians of his time (t); if it was, their minds must have been more flexible than those of

(s) Phil. Transf. vol. LI. p. 755.

(t) Bacchius senior, a musical writer,

cotemporary with Ptolemy, is the only Greek author who gives but seven modes.

modern professors. For had the most popular composers of modern times, had Alexander Scarlatti, for instance, in Italy, Sebastian Bach, in Germany, or Handel, in England, proposed to their cotemporaries so considerable a change in the established musical system, it is hardly possible to believe that it would have been immediately received into general practice.

We know not, indeed, what was the success of Ptolemy's proposed reformation during his life; a *reformation*, it must be owned, that had something *Calvinistical* in it; a *zeal* for *tearing* (u); and yet, strange to tell! all the traces to be found of it are in the *modes* of the *Romish* church, established long after, but which resemble those of Ptolemy in nothing except their number and names. Ptolemy's modes are manifestly transpositions of the scale into *different keys*: the ecclesiastic, only *different species of octave*, in *one* and the same *key*.

Upon the whole, the music so much celebrated by the best classical writers, and of which I shall have the most frequent occasions to speak in my history, was of much higher antiquity than the time of Ptolemy, who flourished when arts and sciences, particularly those of Egypt and Greece, were much degenerated.

It is therefore of no great importance to the history and intelligence of ancient music, at its best period, whether this point concerning the species of octave, for which Sir Francis Haskins Eyles Stiles contends, be accurately settled, or not; for, if he is right, it does not clearly appear, what peculiar and astonishing effects could be produced by a sudden change of mode, which it is not in the power of modern music to produce, by a like sudden change of key.

But such miraculous powers have been attributed to the modes in ancient music, that it must be confessed there is nothing so difficult as to imagine they could have been produced

(u) See Tale of a Tub, Sect. VI.

by a mere transposition of the scale to a different pitch, while the intervals remained the same, or even by the effects of modulation. There must have been other characteristic and strong-marked distinctions: as the kind of poetry to which the music was set; the rhythm or measure; or the nature of certain melodies invented and used by particular nations. Indeed it was from this last circumstance that the denominations of the principal modes were derived, such as the *Dorian*, *Phrygian*, *Lydian*, *Ionian*, and *Æolian*; and there may perhaps have been originally something strongly characteristic in the *melodies*, as well as in the *dialects* of those countries.

In modern music a *change of key*, without a *change of time*, is not sufficient to animate or depress the spirits much: measure must concur as an auxiliary; and mere modulation, though it has its effects, yet it can boast of none like those said to have been operated by a change from the *soft* Lydian, or *grave* Dorian, to the *furious* Phrygian. I should rather suppose then, that in times of musical refinement among the ancients, when the characteristics of national melody were somewhat effaced, the names of the musical modes had much the same use as our technical terms, *grazioso*, *grave*, *allegro*, *con furia*: and that in lyric poetry there were particular species of feet and versification allotted to each mode (x). If that was the case, we might easily suppose that a change of mode would be a change of style and of measure (y). This seems a very natural idea, and yet it has never been suggested by any of the writers who have treated the subject, and who have been so willing to allow miraculous powers to the Greek modes, except one,

(x) All the fancied and boasted properties of the modes must have been given up before the time of Ptolemy, since he not only reduced their number from fifteen to seven, but changed the places of those he admitted; and Bryennius, long after him, gives eight, but all in different parts of the scale from those of Pto-

lemy, though the names of his seven are retained.

(y) Morley, and all the old writers upon modern music, before the use of bars, affixed no other meaning to the *modes*, or *moods*, as they were then called, than that of regulators of *time*, or *measure*.

Teodato Ofio, who, in a very ingenious little tract, published at Milan, 1637, called *L'armonia del nudo parlare*, has something like the same idea, which he slightly mentions, however, with a *perhaps, per avventura*. Speaking of the Mixolydian mode, he says, "I have often thought that it might have resembled the *trochaic* foot; as the Phrygian might the *Anapest*; the Hypophrygian, the *Iambic*; the Hypodorian, the *Dactyl*; and the Doric gravity might likewise have been expressed by the sluggish *spondee* (z)."

Indeed the ancients as frequently speak of the Phrygian and the Lydian *measure*, as of the modes. Heraclides of Pontus, in Athenæus, lib. xiv. p. 614, describing what he calls the three most ancient modes, says "the *Dorian* is grave and magnificent, neither too diffusive, gay, nor varied; but severe and vehement. The *Æolian* is grand and pompous, though sometimes soothing, as it is used for the breaking of horses, and the reception of guests; and it has likewise an air of simplicity and confidence, suitable to pleasure, love, and good cheer. Lastly, the ancient *Ionian* is neither brilliant nor effeminate, but rough and austere; with some degree, however, of elevation, force, and energy. But in these times, continues he, since the corruption of manners has subverted every thing, the true, original, and specific qualities peculiar to each mode are lost (a)."

Apuleius, in his *Florida*, tells us that the *Lydian* measure was appropriated to complaint and songs of sorrow; the *Dorian* to martial airs; and that the *Phrygian* was consecrated to religious ceremonies; distinctions which seem to imply *time* as well as *tone*. But after all that has been said, it would,

(z) Onde il color misso-Lidio si sarà simigliante al piede Trocheo; così come avvisai l'*Anapesto* confarsi col frigio, e forse con l'*Ipofrigio* il Giambo; ma con il subdorio si confarà il Dattilo, ed alla Gravità del Dorio la tardanza dello Spondeo sarà conve-

niente. P. 184. See a notation of these feet, Sect. VI.

(a) Heraclides of Pontus was cotemporary with Plato and Aristotle, and the disciple of both.

perhaps, be more for the honour of the ancients to suppose some of the principles upon which their modes were formed, and concerning which such surprising accounts have been given, to be lost, than to endeavour to reduce them all to our present keys and practice of melody. For, with the few liberties that could be taken with poetical numbers, and the little probability there is that counterpoint was known to them, if we do not give the ancients credit for arts of expression and modulation, which have not been clearly explained in the treatises that are come down to us, and which we are now utterly unable to divine, their music will be reduced to such a low degree of perfection, as nothing but blind enthusiasm for every thing ancient can disguise, or deny.

S E C T I O N IV..

Of Mutations.

THE next subject of enquiry to the *Genera* and *Modes* of ancient music, is that of the *Mutations*, μεταβολαι, or *changes* incident to *melody*; which, in modern music, we should call, upon some occasion, *modulation*. However, the terms are not exactly synonymous; for though to modulate, and to sing, are in ancient authors equivalent, as modulation with them signified merely a change in *melody*, yet the moderns more frequently apply the term modulation to that kind of change in *melody* or *harmony*, which introduces a *new key*. For *modulation* may be brought about by changes in *harmony*, while *melody* is stationary.

In the system of solmisation established upon the hexachords of Guido, *mutations* mean such changes only as are occasioned in the names of the notes by accidental flats and sharps.

The ancients however had four several kinds of accidents in their music that were distinguished by the name of *mutations*. These might have happened in the genus, system, mode, or melopœia. In the *Genus*, when the melody passed from one genus to another, from the chromatic, for instance, to the diatonic or enharmonic, and the contrary. In the *System*, when the modulation passed from a conjunct to a disjunct tetrachord; that is, from one that was united to another by some one found in common to both; as from this

to one that was wholly disjunct, and separated from it by the interval of a tone:

a *mutation* happened in the *Mode*, when there was a transition in the melody from the *Dorian* to the *Lydian*, or *Phrygian*, and the like; and lastly, a *mutation* in the *Melopœia* implied a change of style; as from a grave to a gay, or from a sober to an impetuous strain. If the *mutations* were too sudden and unrelative, they destroyed the impression made upon the ear by the former part of the melody, and the pleasure arising from reminiscence. "The understanding music, says Aristoxenus,

Aristoxenus (*b*), depends upon sensation and memory; for we must not only feel sounds at the instant they strike the organ, but remember those with which it has been struck before, in order to be able to compare them together; for otherwise it will be impossible to follow a melody or modulation with pleasure to the ear, or to form a judgment of its degree of excellence in the mind."

The terms *μελος* and *μελωδία*, which Meibomius has rendered by the Latin words, *modulatio* and *cantilena*, had no other signification than the change of sounds in singing, or, as we should call it, *melody*; and this is clear from a passage in Bacchius senior (*c*), where, in his Introduction to the Art of Music, by Question and Answer, it is asked, "How many kinds of *modulation* there are?" He answers, four; and these, he says, are *rising*, *falling*, *repeating* the same sound to different words, and *remaining upon*, or *holding out*, a musical tone. This is farther explained, Sect. V.

Euclid says that *mutations* may be made into any mode within the compass of an octave, at the distance even of a semitone (*d*). This is a latitude of modulation that would greatly offend modern ears, accustomed only to relative changes of key. Ptolemy, however, does not allow of such sudden and extraneous modulations.

There is something like a specimen of Greek modulation in Plutarch's Dialogue (*e*). If we have placed the modes rightly, the beginning, or first movement of the piece he mentions, was in A; then it passed to E and B, and ended in G (*f*) and

(*b*) Lib. i. p. 38 and 39. Edit. Meibom.

(*c*) P. 11. Edit. Meib.

(*d*) M. Burette is mistaken in his translation of this precept in Euclid, which he has taken from the version of Meibomius, who has likewise either mistaken, or misprinted the passage. Instead of *ἡμιστοναι*, *half a tone*, they have both given *Diesis*,

a *quarter* of a tone, as an allowable modulation, which is not only contrary to the text, but impossible in practice. Vide Euclid, Edit. Meib. p. 20, at the bottom.

(*e*) *Mem. des Inscrit.* tom. x. p. 160.

(*f*) Handel is the only one I know of who has hazarded a modulation from B to G with a flat third; a passage of this kind occurs in the last act of the Oratorio of Athalia.

D. This would be tolerable; but the *νομος τριμερης*, or *three part song*, mentioned by Plutarch, p. 124, which, it seems, consisted in singing three strophes successively, the first in the Dorian mode, D, the second in the Phrygian, E, and the third in the Lydian, F sharp, rising a tone each time, would be in the highest degree offensive to modern ears.

And yet, Athenæus speaks of a similar feat performed by Pythagoras, the Zacynthian, upon the lyre; and Pausanias, of one by Pronomus, the Theban, upon a flute, which he had invented for all the genera. But upon these occasions, what

Athalia, which is so bold and wonderfully happy in expressing the words, that I shall insert it here as a great stroke of the composer, as well as of musical imitation. Athalia

is relating a dream which she had had just before the execution of that conspiracy, which put an end to her tyranny and life.

RECITATIVE.

But as the young bar—ba-rian I ca—refs'd, He plung'd a dagger
 deep within my breast: No ef—fort could the blow re—
 —pel, I strik'd, I fain—ted, and I fell.
 must

must have become of their rule for preferring transitions by consonant intervals? We must suppose that these unrelative *mutations* were very old tricks.

And yet we must not condemn them too hastily; for we find the old church composers, in the early days of counterpoint, neglecting the modern rules of *relation*, or rather not knowing them, and taking, fearlessly, two, or more perfect chords of the *same kind*, diatonically, using every note in the scale, except the seventh, as a fundamental base (g).

This is, doubtless, the true secret of ancient church music, and the principal cause of its effect, so widely different from that of modern compositions; an effect compounded of solemnity, wildness, and melancholy.

SECTION V.

Of Melopoeia.

THE rules concerning the different parts of ancient music that have been already described, lead naturally to the subject of *Melopoeia*, for which they were at first established.

Μελος, *melos*, consisted of a number of *musical sounds* of a certain pitch of voice, opposed to *noise*, or the *unfixed* and *evanescent tones* of common speech.

Μελωδία, *melody*, was the *singing of poetry*, to such sounds: and

(g) Palestrina begins his *Stabat Mater*, which is still used in the pope's chapel, and printed in the music performed there during Passion week, by *three successive common chords*, with *sharp thirds*, to this base, A G F, descending diatonically; and yet this modulation is so qualified by the

disposition of the parts, and tempered by the perfect manner in which it is sung, that though it looks unscientific and licentious upon paper, its effects, of which no idea can be acquired from *keyed instruments*, are admirable.

Μελοποιία, *melopoeia*, the *composition*, or arrangement, of such sounds as were fit for *song*.

These several definitions shew that all melody was originally *vocal*, and applied to *poetry*.

Melopoeia had its particular rules, several of which are come down to us, and are still clear and intelligible: such as that an air, or piece of melody, should be composed in some particular *Genus*, and be chiefly confined to the sounds of some certain *Mode*. As to the succession, or order of these sounds in the course of the air, that was in general confined to four species of intonation, or intervals, which Euclid specifies in his Harmonic Introduction (*h*). These I shall endeavour to describe with exactness, as they may throw some light upon ancient melody.

Euclid tells us, first, that sounds may move either ascending or descending regularly, as thus:

which was called ἀγωγή: secondly, by leaps of greater intervals than a second: thus,

which

was called πλοκή, *interwoven*: thirdly, by repeating the same sound several times, which was called περιεργία, *iteration*: as in

singing these notes

; and

fourthly, that sounds may be sustained in the same tone, which we call a *holding note*, and which the Greeks expressed by the word τόνη.

Thus far seems intelligible; but I cannot help thinking that the third book of Aristoxenus, which is chiefly employed in laying down rules for the immediate succession of sounds in a

(*h*) P. 22. Edit. Meib.

scale, has been misrepresented, as containing rules for the *composition* of melody in general.

He says, indeed, p. 66, "that after a *femitone* the voice can only go two ways up, and two ways down;" that is, by a tone, or another *femitone*. This is true in the order of the scale; but was all *melody* confined to that order? And is there any doubt whether from a *femitone* it might not go by a leap to a third, fourth, or fifth, above or below? M. Burette, however, in his notes upon Plutarch, where the enharmonic of Olympus, and the beauty of its melody are mentioned, says, the beauty must lie in the *novelty*, and the novelty was the *Ditone*, or major third, "which was never heard in the other *Genera*." What! was the Diatonic so strictly confined to a progress by conjoint degrees, as never to be permitted to skip a note, in order to ascend or descend by the interval of a third? Nothing can be so strange as this assertion, or so contrary to the passage just quoted from Euclid, which M. Burette has elsewhere translated and adopted (*i*), and indeed to the definition of the term *πλοκη*, in all subsequent Greek writers upon music, down to Bryennius.

But M. Burette is not wholly singular, I find, in his opinion upon this subject, as Dr. Brown seems to have had the same idea; for in his *Progress of Poetry*, &c. p. 64, he says, that the Greek Diatonic is "utterly *incompatible* with *our* Diatonic scale; because *there* one *femitone*, and two tones, *must* succeed each other *invariably*." Mr. Malcolm is as obscure and unsatisfactory as usual, upon this subject; and leaves it, at least, as unintelligible as he found it.

But the denying or doubting of one of the few facts upon which ancient writers have expressed themselves clearly, is joining in the conspiracy with time, which has already ren-

(i) *Mem. des Inscip. tom. v. p. 178.*

dered the study of Greek music sufficiently hopeless and desperate, to repress the courage of the boldest enquirer.

There were many rules to be observed in moving by leaps, or disjunct degrees, the principal of which was to prefer, in general, consonant to dissonant intervals. It was likewise enjoined not to divide any two semitones into quarter tones, together, or two successive tones into semitones (*k*), nor were two major thirds to follow each other.

But these, and a great number of other rules laid down by Aristoxenus, with respect to the succession of intervals, were all derived from the genera, the rules for which were rules for melody. The Diatonic genus of the ancients resembled our natural scale in every particular; for it is allowed by Aristoxenus even for three tones to succeed each other, ascending or descending, which is all that is allowable in our Diatonic, except in minor keys, where we ascend to the octave of the key note by a sharp seventh, which the ancients seem never to have admitted.

A further detail, or explanation of these rules, would not make the matter much clearer; however, there are some particulars collected together in the first book of Aristides Quintilianus (*l*), that seem to merit attention.

He sets off by dividing *Melopoeia* into three species, taken from the great and general system, which he names after the sounds called *Hypaton*, *Mese*, and *Nete*; that is, lowest, middle, and highest; and these denominations resembled, with respect to melody, our distinctions of base, tenor, and treble.

With regard to modulation in melody he has the same distinctions as Euclid for the several species, though he differs a little from him in his manner of defining them; but these differences are of small importance to us now; and indeed the

(*k*) The prohibition of more than two semitones succeeding each other at a time, rising or falling, is a clear proof that the

ancient chromatic was very different from the modern.

(*l*) P. 28 and 29. Edit. Meibom.

authority of Euclid is so superior to that of Aristides Quintilianus, that nothing which can be cited from him would have weight sufficient to invalidate the testimony of so exact and respectable a writer.

However, the *moral* distinctions of Melopoeia to be found in Aristides Quintilianus are so curious and fanciful, that I shall insert a few of them here.

He allows of three modes (*τροποι*) or styles of Melopoeia: the *Dithyrambic*, or Bacchanal; the *Nomic*, consecrated to Apollo; and the *Tragic*; and acquaints us that the first of these modes employed the strings, or sounds, in the middle of the great system; the second, those at the top; and the third, those at the bottom.

These modes had other subaltern modes that were dependent on them; such as the *Erotic*, or amorous; the *Comic*; and the *Encomiastic*, used in panegyrics. All these being thought proper to excite or to calm certain passions, were, by our author, imagined to have had great influence upon the manners, (*ἡθῆ*); and, with respect to this influence, *Melopoeia* was divided into three kinds: first, the *Systaltic*, or that which inspired the soft and tender passions, as well as the plaintive, or, as the term implies, such as affect and penetrate the heart: secondly, the *Diaſtaltic*, or that which was capable of exhilarating, by kindling joy, or inspiring courage, magnanimity, and sublime sentiments: thirdly, the *Hesuchastic*, which held the mean between the other two, that is, which could restore the mind to a state of tranquility and moderation.

The first kind of Melopoeia suited poetical subjects of love and gallantry, of complaint and lamentation: the second was reserved for tragic and heroic subjects: the third for hymns, panegyrics, and as a vehicle of exhortation and precept (*m*).

(*m*) These imaginations are evidently drawn from the dreams of Pythagoras. Iamblicus, in the life of that philosopher, tells us, that “ he had invented certain musical airs, with which, by a happy mixture of genera, he could, at his pleasure,

All these rules concerning the ancient *Melopoeia* afford only general notions, which, to be rendered clear and intelligible, would require particular discussions as well as illustrations by example; but the Greek writers on music have absolutely denied us that satisfaction, reserving, perhaps, when they published their works, all such *minutiæ* for the lessons which they gave their scholars in private; for in no one of the seven treatises upon ancient music, collected and published by Meibomius, is a single *air*, or *passage* of Greek melody, come down to us; which is the more extraordinary, as there are few treatises upon modern music, without innumerable examples in notes, to illustrate the precepts they contain.

But whatever were the rules for arranging different sounds in such order as would flatter the ear in the most agreeable manner, it is easy to imagine that this regular disposition, and beautiful order of sounds, constituted nothing more than the mere body of melody, which could only be animated and vivified by the assistance of *Rhythm*, or *Measure*: and this will be discussed in the next section.

sure, govern the passions of his scholars, and awaken terror, melancholy, anger, compassion, emulation, fear, and desires of all kinds; as well as stimulate appetite, pride, caprice, and vehemence, guiding each affection according to virtue, with *suitable melodies*, as with so many salutary

and healing medicines." And Plutarch, in his *Discourse on the Cessation of Oracles*, says, that *poetry set to music*, was once the current language of Greece, and the vehicle of history, philosophy, and of every important subject.

SECTION

SECTION VI.

Of Rhythm.

A CONTINUED *motion* in every organized body that is capable of it, is susceptible of some kind of *measure*. This measure marks the several parts of motion, and enables us to judge of their proportions. It is to point out these proportions that the Greeks, among many other terms, have made use of *ῥυθμος*, *Rhythm*, which they have applied to different purposes. They have not only expressed by it the kind of cadence, or vibration of the wings, in the flight of birds; the movement of the feet in the progressive motion of animals; and the gestures, figures, and steps of dancers; but every species of regular motion, such as is observable in the beating of the pulse, and in respiration. They have even abused the original import of the word so far as to apply it to things absolutely motionless and inanimate; such as works in painting and sculpture, in which they have called that symmetry and just proportion which reigns in all the parts by the name of *Rhythm*.

But the most common application of this term has been to express the *time* or duration of many sounds heard in succession: whether these sounds are musical, and such as are produced by voices and instruments, or without any determinate tone, as in the strokes of a hammer upon an anvil; in the beating of a drum; and in the articulations of the voice in common speech, in repeating poetry, or pronouncing an oration.

But our enquiries here shall be confined to that species of *Rhythm*, which more particularly concerns melody, and which merits **discussion** the more, on account of its great importance in music,

music, and of the darkness in which it is usually involved by writers on the subject.

From the strict union of poetry and music among the ancients, which seem to have been almost inseparable, an offence against *Time* or *Rhythm* was unpardonable, as it not only destroyed the beauty of the poetry, but sometimes even the meaning of the words of which it was composed. Το παν παρὰ μουσικοῖς ὁ ῥυθμός, say the Greeks; it was the principal point in their music, without which they regarded melody as wholly unmeaning and lifeless. Hence Plato refused the title of musician to every one who was not perfectly versed in *Rhythm*, as we should now to a bad *Timeist*. It is of such importance, that, without it, music can have no power over the human passions. Pythagoras, according to Martianus Capella, used to call *Rhythm*, in music, the *male*, and *Melos* the *female*; and Doni (n) has compared *Rhythm* with *design*, in painting, and *Melos* to *colouring*. It is certain that an ordinary melody, in which the *time* is strongly marked, and the accents are well placed, has more effect than one that is deficient in those particulars, though more refined and uncommon, and set off with all the richness of harmony, and learning of modulation.

Isaac Vossius, in his Dissertation, *de Poematum Cantu, et viribus Rhythmi*, has attributed to *Rhythm* all the miraculous powers of ancient music.

As vocal music was chiefly cultivated among the ancient Greeks, the first part of these *rhythmical* observations shall be confined to lyric poetry.

Aristides Quintilianus defines musical *Rhythm* συστημα ἐκ χρόνων κατὰ τινὰ τάξιν συγκειμένων (o). “The assemblage of many parts of time, which preserve a certain proportion with each other;” which, since the use of bars in music, may be called aliquot parts of a measure, or a given portion of

(n) Tom. ii. p. 203.

(o) Lib. i. p. 31. Edit. Meibom.

time. For the better understanding of this definition, it is necessary to remember that the music in question was constantly sung to verses, the words of which were all composed of *long* and *short* syllables; that the short syllable was pronounced as quick again as the long, and the short syllable being regarded as one part or portion of this measure, the long was equal to two: so that, consequently, the sound which was applied to the long syllable, was equal in duration to two such sounds as were sung to short syllables, or, in other words, that one note was equal to two portions of time, and the other to one. It must likewise be remembered that the verses thus sung, were composed of a certain number of feet, formed by these long and short syllables differently combined, and that the *Rhythm* of the melody was regulated by these feet; as, whatever was their length, they were always divided into two parts, equal or unequal, the first of which was called ἀρσις, *elevation*, and the second θεσις, *depression* (*p*). In like manner the *Rhythm* of the melody, corresponding with these feet, was divided into two parts, equal or unequal, which we now call the *down* and *up* parts of a bar, expressed by *beating down* the hand or foot, and *lifting it up*. Thus far concerns *vocal Rhythm*; what follows belongs to *instrumental*.

As the notes of the ancient music were constantly written over each syllable of the verses which were to be sung; as the quantity of each of these syllables was perfectly known to musicians; and as the duration of each sound was regulated by the syllables; it did not seem necessary that the *time* should be marked by any particular sign or character. However, for the ease and convenience of the musician, a canon, or rule, was given of the *Rhythm* at the beginning of a lyric poem. This canon consisted of nothing but the numbers 1 and 2, that is,

(p) A *foot* in poetry seems to answer to a *bar* in music. A *time*, among the ancients, was a proportion of that foot or

bar; as, with us, a bar is divided into accented and unaccented parts.

the *Alpha* and *Beta* of the Greek alphabet, disposed according to the order of the breves and longs which composed each verse, and divided according to the number of its feet. The *Alpha*, or unit, marked a *breve*, because it contained only one portion of time; and the *Beta*, or binary, marked a *long*, being equal to two portions. Some of these poetical, or rhythmical canons, are still to be found in the Manual of Hephæstion (q).

Rhythm in Latin was called *numerus*; and this term, in process of time, was extended to the melody itself, subjected to certain numbers or rhythms, as appears from this line of Virgil:

Numeros memini, si verba tenerem:

If I knew the words, I could remember the tune well enough. The Romans had signs for *rhythm*, as well as the Greeks; and these signs were not only called *numerus*, but *æra*, that is, *number*, or the mark for time. *Numeræ nota*, says Nonius Marcellus. In this sense we find the word used in a verse of Lucilius:

Hæc est ratio? perversa æra? summa subducta improbè?

Do you call that settling accounts? such a confusion of figures? and the sum falsely cast up?

Though the word *æra* was at first only applied by musicians to the *time*, or *measure* of the melody, they afterwards made the same use of it as of *numerus*, to express the tune or melody itself; and it has been thought that the word *air*, or, as the Italians call it, *aria*, which includes a certain piece of music of a peculiar *rhythm*, or cadence, is derived from *æra*.

Such was the manner in which the ancients marked the measure in their written music; but to make it still more sen-

(q) This author lived in the time of the emperor Verus, in the second century. He was a grammarian of Alexandria. The

work alluded to is *de re Metrica*. Suidas, Jul. Capitolinus.

sible in the execution, they beat time in several different ways. The most common was by the motion of the foot, which was lifted up and beat down alternately, according to what we call common, or triple time. To regulate the time was generally the office of the music master or director, called *μεσοχορος* and *κορυφαίος*, *coryphæus*, because he was placed in the middle of the orchestra, among the musicians, and in an exalted and conspicuous situation, in order to be seen and heard the more easily by the whole band.

The directors of the time were likewise called in Greek *ποδοκτυποι* and *ποδοψοφοι*, from the noise of their feet. In Latin they were called *pedarii*, *podarii*, and *pedicularii*, for the same reason. Their feet were generally furnished with wooden or iron sandals, in order to mark the time in a more distinct manner: these implements the Greeks called *κρηπεζία*, *κρηπλα*, *κρηπετα*; and the Latins *pedicula*, *scabella*, or *scabilla*, because they resembled little pattens, or clogs.

But it was not only with the feet that the ancients beat the time, but with all the fingers of the right hand upon the hollow part of the left; and he who marked the time or rhythm in this manner, was called *manu-ductor*. For this purpose they sometimes used oyster-shells, and the shells of other fish, as well as the bones of animals, in beating time, as we do of castanets, tabors, &c. Both Hesychius, and the scholiast of Aristophanes, furnish passages to confirm this assertion. What a noisy and barbarous music! All *rhythm*, and no sound. The drums and sistrums of the Idæi Dactyli could not have been more savage.

Many ancient instruments were monotonous, and of little use, but to mark the measure; such were the *cymbalum* and *sistrum*; and it was for this reason, perhaps, that the cymbal was called *æra*, by Petronius. But it would afford us no very favourable idea of the abilities of modern musicians, who should require so much parade and noise in keeping together.

The more time is beat, says M. Rouffeau, the less it is kept; and, in general, bad music, and bad musicians, stand most in need of such noisy assistance.

However, if any thing like the power which ancient music is said to have had over the passions can be credited, it must have derived this power chiefly from the energy and accentuation of the *rhythm*. Aristides Quintilianus (s) gives a long list of different metres, with their several properties of calming or agitating the mind, according to the nature of the syllables, or feet of the verses, as well as the sentiments which they were intended to express; and as it will afford the reader an opportunity of seeing how much stress was laid on this part of music, and how fanciful and ideal many of the distinctions seem to have been, I shall give the whole passage in English.

“ Measure, which begins by a *down part* of the metrical division, is calm and gentle; whereas that which begins by an *up part*, expresses trouble and agitation. Full time, that is, always accompanied with melody, is noble in its effect; and that arising from catalectic verses, deficient in a syllable or note, if it be supplied by a rest or pause, has more simplicity. Time of equal proportions, is graceful; and that of odd numbers, or sesquialterate proportion, is more proper to excite commotion. Double time is a kind of mean betwixt the graceful and the turbulent. Among the movements of two even notes, if they are short, their effect is lively, impetuous, and proper for military dances, called *Pyrrhics*, in which the dancers are armed; and time, of which the movement is regulated by poetic feet composed of long syllables, is more grave, serious, and fit for hymns which are sung in honour of the gods, at festivals, and in sacrifices: the measure composed of a mixture of long and short notes, participates of the qualities of both these last mentioned.”

(s) Lib. ii. p. 97. Edit. Meibom.

“ Among

“ Among the duplicate proportions, the Iambic and Trochaic have the most vivacity and fire, and are peculiarly proper for dancing. Those called *ορθιοι* and *σημαντοι*, of which the *Arfis* answers to two long syllables, are full of dignity. Compound measures are more pathetic than simple; and such as are confined to one genus, move the passions much less than those which pass from one genus to another (1).”

After giving these characteristics of time, Aristides proceeds to prove their reality and foundation in nature, by drawing a parallel between some particular species of *Rhythm*, and the gait and actions of man. He pretends, for instance, “ that the motion which answers to the Spondaic measure, is a sign of moderation and fortitude; that Trochaics, or Pæans, indicate a greater degree of fire and vivacity; that the Pyrrhic has something low and ignoble in it; that an irregular velocity implies dissoluteness and disorder; and finally, that a movement resulting from all these, is wild and extravagant.”

With respect to the excellence and effects of ancient music, it is very difficult to steer between the extremes of credulity and scepticism. Such enthusiasts as Aristides Quintilianus, by asserting too much, have thrown a ridicule upon the subject, and inclined us, perhaps, to believe too little. The simplicity of ancient melody, and its slavish dependence upon poetry, may probably have given birth to some of these fancies. But however that may have been, this seems the place in which to give some account of those *poetic feet*, and *Rhythms*, upon which the ancients laid so much stress.

A poetical *Foot* consists of a certain number of syllables, which constitutes a distinct part of a verse, as a *Bar* does of an air in music. An Hexameter verse consists of six of these feet, a Pentameter of five.

The *Spondee*, *Iambus*, *Trochee*, and *Pyrrhic* or *Periambus*, are dissyllabic feet, or of two syllables each.

(1). The French seem to have had this precept in view in composing their old serious operas, in which the time is for ever changing.

The *Spondee* consists of two long syllables (u),
as *vertunt*. --

An *Iambic* foot has one short and one long syllable (x). *Θες, λεγω. potens, amas.* --

return.

The *Trochee* has one long and one short syllable,
as *gratus, musa.* --

filent.

The *Pyrrhic*, or *Periambus*, two short syllables, as
mare, probus. --

quiver (y).

The *Dactyl*, *Anapæst*, *Molossus*, *Tribrach*, *Bacchius*, *Antibacchius*, *Amphibrachys*, and *Creticus*, are *Trissyllabics*, or of three syllables. To some of these we have no equivalents; however, the *Dactyl*, consisting of one long and two short syllables --

is very common in our language, as *tenderly, hastily*; and we have verses composed of dactyls as well as the Greeks and Romans:

Mÿ | bānks thēy wēre | fūrnish'd wīth | beēs,
Whōse | mūrmurs in- | vīte ōne tō | sleēp.

These may be compared with the following celebrated passages in Homer and Virgil, where the sound is manifestly, and intentionally, an *echo to the sense*. Homer (*Odyssey*,

(u) There is no true *Spondee* in the English language, as every word of two syllables has an accent upon the first or second syllable, which renders it longer than the other. The ancient *Spondean* or libation air composed by Olympus in the *Old Enharmonic*, without the quarter tone, was, however, in this measure, consisting of slow even notes, and the foot derived its name from this use of it.

(x) *Iambic* verses were originally used in satire, with which they are often synonymous in ancient authors.

(y) In our language, though it is go-

vernèd almost entirely by Accent, an accented and a long syllable are by no means to be confounded; at least in setting words to music. Mr. Stillingfleet, *Principles and Power of Harmony*, has given the word *level* as a Trochaic, that is, a word in which the first syllable is long, the second short; but Trochaics in English seem to be such words as *filent, charming, kindred*; and *level, revel, quiver, rider*, correspond more exactly with the Pyrrhic or Periambus of the ancients, being composed of two short syllables.

book xi.) after he has described in labouring Spondees the slow and painful manner in which Syſiphus rolled the ſtone up-hill, makes uſe of nimble Daſtyls in deſcribing its ſwift deſcent :

Αὐθις ἐπειτὰ πῆδονδε κὺλινδῆτο λαῶς ἀναϊδῆς.

And Virgil, lib. viii. v. 596, deſcribes in pure Daſtyls the gallopping of the horſe :

It clāmōr, ēt āgmīnē fāētō
Quādrūpēdāntē pūtrēm ſōnitū quātīt ūngulā cāmpūm.

The *Anapæſt* has two ſhort and one long ſyllable ; as ſa-
piens, recubans, ~- . Isaac Voſſius, *de Viri-
bus Rhythmi*, p. 56, has ſaid, that the French have no Daſtyls,
nor the Engliſh a perfect *Anapæſt* in their language. Let the
French ſpeak for themſelves ; but as to our own part of the
charge, it is eaſily confuted by the mere mention of the words
recommēd and *diſappoint*.

I ſhall enumerate the reſt of the poetic feet of the ancients,
merely to ſhew what reſources they had in varying their me-
lody by different combinations of two kinds of notes.

The *Moloffus* has three long ſyllables, --- 

The *Tribrach*, three ſhort, ~~~ 

The *Bacchius*, which is the reverſe of the Dac-
tyl, has one ſhort, and two long ſyllables, ~-- 

The *Antibacchius*, two long and one ſhort, ---~ 

Amphibrachys, one ſhort, one long, and one
ſhort, or one long between two ſhort, ~-~ 

Creticus, one ſhort between two long, ---~ 

The *Quadrifyllabics* are compounded of feet already mentioned.

The *Proceleusmaticus* is composed of four short syllables, or of two Pyrrhics, ~~~~

The *Choriambus*, two short between two long, or the junction of the *Trochæus* and *Iambus*, ~~~~

Epiurite; of this foot there are four species: 1. the *Iambus* and *Spondee* ~~~~: 2. the *Trochee* and *Spondee* ~~~~: 3. the *Spondee* and *Iambus* ~~~~: and 4. the *Spondee* and *Trochee* ~~~~.

The *Pæan* or *Pæon*, which is the contrary of this last, consists of one long syllable, and three short: ~~~~.

Servius reckons more than a hundred different kinds of verse among the Latins; and, according to Hephæstion, the number was still more considerable among the Greeks; consequently their melody might have been varied in as many different ways. There is not, however, the least appearance of the ancients having had in their vocal music that kind of measure which we call pointed; nor did they admit rests in the middle of a verse, though at the end of catalectic, or broken verses, the singer was allowed to make up the deficiency by a silence, equivalent to a rest in modern music; and though they had so great a variety of feet in their poetry, many of those already instanced are unfit for modern melody.

After all the researches which I have been able to make, it must be acknowledged that the subject of ancient music, in general, still remains, and probably ever will remain involved in much difficulty and uncertainty. It is fortunate, however, for those who wish to view as near as possible this dark angle of antiquity, that the prospect happens to be the clearest just in that part where all its admirers assure us it is best worth examining; for however ignorant we may be of the *Melody* of ancient music, the *Rhythm*, or time of that melody, being regulated entirely, as has been already observed, by the metrical feet,

feet, must always be as well known to us as the prosody and construction of the verse; so that we have nothing to do but to apply to the long and short syllables any two notes, one of which is double the length of the other, in order to know as exactly as if we heard, in what manner any particular kind of *metre* was set by the ancients with respect to *Time* and *Cadence*, that boasted *Rhythm*, which we are so often told was *every thing* in their music. It may therefore afford some gratification to the curiosity of those who have never considered the poetry of the ancients in this point of view, if I produce a few examples, which will, perhaps, help to throw a little light upon the *dramatic* music of the Greeks, and give some idea of the rhythmical resources of the *poet-musician* in one of the most interesting provinces of his art.

The first example shall be of the *Iambic* verse, which chiefly prevails in the Greek tragedies, and in which the dialogue and soliloquy, indeed all but the chorus and ode, were generally written. I shall content myself with applying notes of correspondent lengths to the syllables, and marking the time; leaving the *Melody* to the imagination of the reader. Should I presume to supply it, I might expect to be reproached as another *Salmoneus* for my temerity.

Demens! qui nimbos et non imitabile fulmen, &c. (z)

These

(z) Salmoneus was a king of Elis, Who mock'd with empty sounds and mimic rays, Heav'n's awful thunder, and the lightning's blaze.

PITT'S *Virg.* Book vi.

(a) This measure when pure and unmixed, consisted of six Iambic feet, as, *ēquēs | sōnān|tē vēr|bērā|būt ūn|gūlā.* Such verses, however, seldom occur. The laws of this metre only required that the *second, fourth, and last* feet should be

Iam-

These lines are the beginning of the *Hecuba* of Euripides, and were sung by the ghost of Polydorus (*b*). The bars in the *verse* are only to shew how the ancients divided it into three portions of two feet in each: but the bars of *Time*, the *Thesis*, or *beat*, must always fall in the middle of the foot: $\sim | \text{—} | \text{—}$. For the sake of distinguishing the feet more clearly, I have barred them singly; though it would have been more conformable to the ancient manner of scanning this kind of verse, and probably more expressive of its cadence and *effect*, to have made but three bars in each line (*c*).

Besides this metre, the dialogue admitted, occasionally, *Trochaic* verses. They are generally introduced in scenes of hurry and disorder; being, as Aristotle has described them, and as their name implies, a voluble and *dancing* measure (*d*). A character which the reader will not be inclined to dispute, when he compares the ancient *Trochaic* with a measure exactly corresponding to it in our own language, but which we have not yet admitted into our tragedy.

Πῆ' ἔν' ἑτὸς, ὅς πεφύγῃ | τ' ἔμὸν ἐκ δόμων ἕψος (*e*);

This

Iambics; in the other places, *Spondees*, *Anapaests*, and *Dactyls*, were admitted. This metre answers to our *Alexandrine*, or verse of twelve syllables; but more exactly in the *number* and *kind* of feet, than in its cadence, or general effect upon the ear. The pause after the third foot, so essential to a melodious *Alexandrine*, has no place but by accident, in the *Iambic*, which runs more swiftly, and has a more prosaic effect. This, undoubtedly, led the ancients to measure it *per dipodiam*, or by double feet, (see *Hor. Art. Poet.* v. 252. *pes citus: unde, &c.*) which answer to double bars in modern music. Ariosto wrote some comedies in this Iambic measure. One of his lines will perhaps be as exact a representation of the ancient *Iambic* as can be produced, in point of cadence.

Per dio son quasi in pensier di | tornarmene.
The following *Alexandrine* of Spenser may also serve for the same purpose.

So in his angry courage fairly pacified.

(*b*) From the drear mansions of the dead, and gates

Of darkness horrible, I come, where reigns,
Remote from all the Gods, Hell's awful king.

(*c*) The *Iambics* of Greek Comedy differ from these only in a little more liberty of construction: those of the Roman, in Plautus and Terence, are so licentious, as often not to differ perceptibly from Prose, even in the judgment of Cicero himself: *propter similitudinem sermonis, sic saepe sunt abjecti, ut nonnunquam vix in his numerus et versus sentiri possit.* *Orator*, cap. 55.

(*d*) Τροχαιον — ορχηστικωτερον. *Arist. Rhet.* 3. 4. et *Poet.* 4.

(*e*) Eurip. *Orest.* 1539. Orestes runs upon the stage with a sword in his hand in pursuit of a Phrygian slave who had offended him, crying out, literally, “Where is he who ran away from my sword, out of the

general, that it seems to have admitted of such an unbounded variety in the mixture and arrangement of feet, and to have been fettered by so few restraints, that, to a modern ear, it is frequently not to be distinguished from a smooth and elegant prose. We can therefore be certain of nothing, concerning the music applied to the ancient chorus, except the *relative lengths* of the notes as they are determined by the *prosody*: in what manner the ancients divided them by *beats*, I do not even presume to guess; and I believe it may be proposed to the musical reader as a problem, worthy, for its difficulty, at least, if not for its importance, to exercise his sagacity, how the following specimen should be *barred*, in order to render it as little tormenting to the ear as possible.

Ω γέ-νε-αι βράτων, ὡς ὑμᾶς ἰ-σαὶ καὶ τὸ μῆδεν.

Ζῶ-σας ἔ-να-ριθ--μῶ.

Τίς γάρ, τίς ἄ-νήρ πλε-όν

Τὰς εὐ--δαί-μῶ-νι-ας φέ-ρει,

Ἡ τὸ-σῶ-τόν ο--σόν δο-κεῖν

Καὶ δοξ--αντ' ἄ-ποκ λι-ναί; (g)

The most striking circumstance in all these examples, is the perpetual change of time, occasioned by the mixture of un-

 O hapless state of human race!
 How quick the fleeting shadows pass

Of transitory bliss below,
 Where all is vanity and woe!

FRANCKLIN.
 equal

equal feet (*h*). To the eye, indeed, the Recitative of the old French opera presents a similar appearance; but where no strict time is observed, the changes are less perceptible to the ear. No circumstance relative to ancient music has been more frequently and triumphantly opposed to the modern, in proof of superiority, than its inviolable adherence to the *fixed quantity* of syllables (*i*). It is perhaps equally difficult to disprove this, and to conceive how such a music could be rigorously executed, without throwing both the hearers and performers into convulsions. If, however, this was the case, we need no longer wonder at the noisy expedients, to which the ancients had recourse in beating time; for I believe the best modern band would find it difficult, if not impossible, to keep exactly together in the execution of a Greek Chorus, though assisted by all the clatter of an ancient *Coryphæus*.

Upon the whole, perhaps, even the imperfect view which I have here attempted to give of the rhythmical resources of ancient music, may be sufficient to warrant something more than a doubt, whether, after all that Isaac Vossius (*k*), and many others have said, a *fixed prosody*, and the rigorous, unaccommodating length of syllables, be any recommendation of a language *for music*; that is, whether a music formed and moulded closely upon such a language, must not necessarily be cramped and poor, in comparison of that free, unshackled variety; that independent range of rhythmical phrase, which constitutes so considerable a part of the riches of *modern music* (*l*). Let the most inventive composer try to set half a dozen *Hexameters*, pure *Iambics*, or any other verses that will

(*b*) See *Reflex. Crit.* of the abbé du Bos, tom. iii. § 2. p. 33.

(*i*) *In Versu quidem Theatra tota exclamatione, si fuit, una syllaba brevior aut longior.* Cic. *Orat. ad Brut.* 52.

(*k*) This author, *De Viribus Rhythmici*, p. 128, advises the moderns, if they would have any music fit to be heard, to dismiss all their *barbarous* variety of notes, and retain only *minims* and *crotchets*. This

would, indeed, be *inventis frugibus, glande vesci!*

(*l*) I am happy to find an ingenious writer of the same opinion. "Music," says Mr. Webb, borrows sentiments from poetry, and lends her movements, and consequently must prefer that mode of versification, which leaves her most at liberty to consult her own genius. *Obs. on Poet. and Mus.* p. 131.

fall into regular common or triple time, and he will soon find that no resources of melody are sufficient to disguise or palliate the insipid and tiresome uniformity of the measure; and as for any thing like expression, we may as well expect to be affected by the mechanical strut of a soldier upon the parade. In other metres, such as those already given in the preceding examples, where feet of different times are intermixed, *some* variety is indeed acquired; but it is a misplaced variety, which, without obviating the tiresome effect of a confinement to no more than *two* lengths of notes, adds to it that of an awkward and uncooth arrangement: the ear is still fatigued with uniformity where it requires change, and distracted by change where it requires uniformity.

Modern music, on the contrary, by its division into *equal* bars, and its *unequal* subdivision of these bars by notes of various lengths, unites to the *pleasure* which the ear is by nature formed to receive from a regular and even measure, all the *variety* and *expression* which the *ancients* seem to have aimed at by sudden and convulsive changes of time, and a continual conflict of jarring and irreconcilable *Rhythms* (m).

It is evident, from the proofs already given, that the Greeks and Romans had but two different degrees of long and short notes; and even the old lozenge and square characters still used in the Canto Fermo of the Romish church, under the denomination of Gregorian notes, are but of two

(m) Nothing seems more essential to musical pleasure, than the division of melody into *equal portions* of time, or *bars*. Quintilian attributed to this *natural* mensuration of the ear, the first production of poetry: *Poema—aurium mensurâ, et similiter decurrentium spatiorum observatione esse generatum. Hexameters* and *Iambics* appear to have been the most ancient Greek metres; and the latter, if we may credit Horace, *Art. Poet.* 253, were at first *pure* and uncompounded. The mixture of *unequal* feet, and the Dithyrambic licence of lyric poetry, were later refinements. The progress of *musical Rhythm* was, of course, the same. Plutarch expressly says, in the dialogue *de Musica*, that the compositions of Terpander, and

other old masters, were set to *Hexameters*, chiefly of Homer; that is, they were in *regular common time*. The change and intermixture of Rhythms is spoken of as the innovation of *modern* artists. Plato rejects these complicated measures from the music of his Republic: and even Isaac Vossius, the great champion of ancient *Rhythm*, who asserts that “no man can be a good musician, that is not a good drummer,” owns, p. 11, that *vitiosum & incompositum imprimis, fiet carmen, si duorum, trium, quatuor, pluriumve temporum pedes, veluti Pyrrichii, Iambi, Dactyli, Pæones, Ionici, simul copulentur*: though this is done continually, not only in the *lyric* part, but even in the *dialogue* of the ancient drama.

kinds:

kinds: the time of these may, indeed, have been accelerated or retarded, but still the same proportion must have been preserved between them; and all their variety must have arisen from different combinations of these two kinds of notes, such as any two of ours could afford: as semibreves and minims, minims and crotchets, or crotchets and quavers.

This accounts for the facility with which even the common people of Greece could discover the mistakes, if any were committed, in the length and shortness of the syllables, both with respect to the poetry, and the music, a point of history in which all writers agree; and this seems to confirm what has been already said in the fifth section: that besides the intervals peculiar to the melody, *Rhythm*, or time, must have contributed to characterize the modes, though it has no kind of connection with our flat and sharp keys; and this gives an idea quite different from what our modern modes, taken as keys, and our music, in general, furnish. Tartini upon this subject says, that we make the prosody subservient to the music, not the music to the prosody; and adds, "that as by the laws prescribed to the ancient musicians, they were obliged to preserve rigorously in their music the quantity of syllables, it was impossible to protract a vowel, in singing, beyond the time which belonged to a syllable: we, on the contrary, prolong the vowels through many bars, though in reading they are oftentimes short."

Tartini, however, in pure courtesy, allows to the ancients a discretionary power of making syllables longer or shorter than rigorous time would admit, in order to diversify expression, and to enforce the passion implied by the words (z); but if time was rigorously beaten, in the manner the ancients have related, it is not very easy to subscribe to this opinion.

And now, having explained the nature, difference, and properties of ancient *Rhythm*, I shall bestow a few words on an

(z) *Trat. di Mus.* p. 139.

examination of the modern, and endeavour to shew what it has in common with the ancient, and what peculiar to itself (a).

We no longer know *Rhythm* now under its ancient name; however, it has been continued, with a small change of pronunciation, merely to express the final cadence of verses, or the agreement and similarity of sound in the last syllables of two or more lines in poetry; being at present what we call *Rhyme*: whereas the proportion subsisting between the different parts of a melody are called *time, measure, movement*.

And when we come to examine this proportion, we find that it only consists of two kinds, differently modified; and these two are known by the names of *common time*, consisting of equal numbers, and *triple time*, of unequal.

Tartini has deduced all measure from the proportions of the octave and its fifth. (b) "Common time, or measure, says he, arises from the octave, which is as 1 : 2; triple time arises from the fifth, which is as 2 : 3. These, adds he, are the utmost limits within which we can hope to find any practicable proportions for melody. Indeed many have attempted to introduce other kinds of measure, which, instead of good effects, have produced nothing but the greatest confusion; and this must always be the case. Music has been composed of five equal notes in a bar, but no musician has yet been found that is able to execute it."

By the improvement of instrumental music, and indeed by the liberties which we have taken with poetry in singing, we

(a) Mr. Marpurg has published a very useful work for his countrymen in Germany, upon this subject, under the title of *Anleitung zur Singcomposition*, Berlin, 1758, *Introduction to Vocal Music*, in which he has compared the pronunciation and versification of the Latin, German, and Italian languages. A strict adherence, however, to the rhythmical laws of Greece and Rome would not enrich our melody; though accurate rules for English *prosody*

might be settled by musical characters; and as *prosody* comprehends not only the rules of pronunciation, but the laws of versification, a treatise on the subject, as far as it concerns vocal music, would be a most useful work to our young lyric composers, as well as to foreigners, who frequently injure that poetry which their melody should enforce and explain.

(b) *Trat. di Mus.* p. 114.

have

have multiplied notes, and accelerated the measure. Instead of one sound to one syllable, or one portion of time for a short syllable, and two for a long one, we frequently divide and subdivide the time of these several portions into all their aliquot parts, and sometimes into incommensurable quantities.

After the invention of musical characters for time, different from those in poetry, the study of their relations became one of the most laborious and perplexed parts of a musician's business. These characters were of different value and velocity, according to other characters placed at the beginning of a musical composition, and likewise frequently occurring in the course of a piece, to announce a change of measure: as from common time to triple, from quick to slow, or the contrary. These characters were called *moods*, but they were so extremely embarrassing and ill understood, till the invention of bars, by which musical notes were divided into equal portions, that no two theorists agreed in the definition of them.

These *modes*, by which the kind of movement with respect to quick and slow, as well as the proportions of the notes, used to be known, since the use of technical terms, chiefly taken from the Italian language and music, have been adopted, serve no other purpose than to mark the number and kind of notes in each bar.

But by this invention of musical characters for time, and the use of bars, we have certainly advanced in the performance of instrumental music, by giving to it more energy and accentuation; it has now a cadence and feet of its own, more marked and sensible than those of poetry, by which it used to move.

We have also, in our *airs*, a distinct species of music for poetry, wholly different from *recitative* and *chanting*; for in these we are no more tied down to stated measure than the ancients, but are governed by the accent and cadence of the words. However, our *florid-song*, it cannot be dissembled, is not always sufficiently

subservient to poetry ; for in applying music to words, it frequently happens that the finest sentiments and most polished verses of modern languages are injured and rendered unintelligible, by an inattention to *prosody*. Even the simple and plain rules of giving a short note to a short syllable, a long to a long ; and of accentuating the music by the measure and natural cadence of the verse, which the mere reading would point out to a good ear and understanding, are but too frequently neglected.

Modern melody requires, perhaps, more than a single sound to a single syllable ; and a fine voice deserves, now and then, a long note to display its sweetness ; but this should be done upon long syllables, and to open vowels, and, perhaps, in general, after the words have been once simply and articulately sung, for the hearer to know what passion is intended to be expressed, or sentiment enforced, by future divisions.

Expletives, particles, and words of small importance, are forced into notice by careless or ignorant composers, who, only intent upon mere music, pay no regard to her sister, poetry. But then, poetry, in revenge, is as little solicitous about musical effects ; for symmetry of air, or simplicity of design, are generally so little thought of, that every heterogeneous idea, which can be hitched into rhyme, is indiscriminately crowded into the same song. Indeed music and poetry, like man and wife, or other associates, are best asunder, if they cannot agree ; and on many occasions, it were to be wished, that the partnership were amicably dissolved.

Salinas tells us, from St. Augustine, that poets and musicians have ever been at strife concerning long and short syllables, accents, and quantity, since they have ceased to be united in one and the same person, and have set up different interests.

There is some poetry so replete with meaning, so philosophical, instructive, and sublime, that it becomes wholly enervated

vated by being drawled out to a tune, which affects no part of the head, but the ear.

And there is, again, some kind even of instrumental music, so divinely composed, and so expressively performed, that it wants no words to explain its meaning: it is itself the language of the heart and of passion, and speaks more to both in a few notes, than any other language composed of clashing consonants, and insipid vowels, can do in as many thousand.

And, upon the whole, it seems as if poetry were more immediately the language of the head, and music that of the heart; or, in other words, as if poetry were the properest vehicle of instruction, and modulated sound that of joy, sorrow, and innocent pleasure. "Let the musician, says M. Rousseau, "have as many images or sentiments to express as you please, "with few simple ideas: for the *passions* only *sing*, the *understanding speaks* (c)."

But notwithstanding both poetry and prosody are so frequently injured by injudicious composers, it must not be imagined that in our simple airs of the gavot and minuet kind, we have no musical *Rhythm*, or that it always clashes with the poetical. Innumerable instances may be given from well known English songs, where the cadence of the verse, and even the pronunciation of each syllable, is carefully preserved by the air. For though our time-table furnishes six different degrees of long and short notes, without points, yet, if the divisions in songs designed to display a particular talent for difficult execution be excepted, we seldom use more than *two kinds* of notes in the same air.

Mirth, admit me of thy crew, by Handel, as well as several popular songs by Dr. Arne, Mr. Jackson, and others, are sufficiently conformable to poetical numbers and *Rhythm*, to satisfy the greatest admirers of ancient simplicity, or even such

(c) *Dict. de Musique*, Art. ACCENT.

as love poetry better than music, from whom complaints of non-conformity generally proceed.

Isaac Vossius says it is now above a thousand years, since musicians have lost that great power over the affections, which arose only from the true science and use of *Rhythm*; and he accuses modern music of such a want of time and accent, as to be all of one style and colour (*d*). We will not defend the age in which Vossius wrote from the charge, nor the music of the present *serious* opera in France; but the compositions of Italy and Germany are certainly free from the censure, as music is now more divided into phrases, and sentences, than it was; time is more marked, and more easily felt than it has ever been since the days of Guido. What it was before, is not very well known; but to confess the truth, it is my opinion, that whatever it has comparatively lost in some particulars, it has gained in others, as I shall endeavour to manifest in the course of this work.

S E C T I O N VII.

Of the Practice of Melopoeia.

IT was long and ardently wished, that a collection of some of the most beautiful melodies of antiquity could have been found among the ancient manuscripts that have escaped the ravages of time, in order to determine what kind of music it was, of which such wonders have been related; as examples would have been more decisive in proving the truth or

(*d*) Adeoque temporum varietate destituitur hujus Ætatis Musica, ut vere de ea dici posset, unius propemodum eam esse coloris et saporis. De Poemat. Cantu et Virib. Rhythmi, p. 86. But true English singing

should certainly not be accused of want of accent: for, like the French, according to M. Rousseau, in quick movements, it resembles *un corps dure et anguleux qui roule sur le pavé.*

falsehood

falsehood of the effects that have been attributed to it, and its comparative excellence with the modern, than the strongest arguments that can be drawn from history, or the dark and dry musical treatises that are come down to us. But remains of this kind are not easily found: however, a few are still subsisting, of which I shall give a minute account.

At the end of a Greek edition of the astronomical poems of Aratus, called *Phænomena*, and their *Scholia*, published at Oxford, in 1672, the anonymous editor (*e*), among several other pieces, has enriched the volume with three hymns, which he supposed to have been written by a Greek poet called Dionysius, of which the first is addressed to the Muse Calliope, the second to Apollo, and the third to Nemesis; and these hymns are accompanied with the notes of ancient music, to which they used to be sung.

This precious manuscript, which was found in Ireland, among the papers of the famous archbishop Usher, was bought, after his decease, by Mr. Bernard, fellow of St. John's college, who communicated it to the editor, together with remarks and illustrations by the reverend Mr. Edmund Chilmead, of Christ-church, who likewise reduced the ancient musical characters to those in common use. It appears by the notes, that the music of these hymns was composed in the Lydian mode, and Diatonic genus.

Vincenzo Galilei, father of the great Galileo, first published these hymns, with their Greek notes, in his *Dialogues upon Ancient and Modern Music*, printed at Florence, 1581, folio. He assures us, that he had them from a Florentine gentleman, who copied them very accurately from an ancient Greek manuscript, preserved in the library of cardinal St. Angelo, at Rome, which MS. likewise contained the treatises of music by Aristides:

(*e*) Fabricius, *Bibliotheca Græca*, tells us, that it was Dr. John Fell, afterwards bishop of Oxford, to whom the literary

world is indebted for this elegant and accurate edition of Aratus.

Quintilianus,

Quintilianus, and Bryennius, since published by Meibomius, and Dr. Wallis. The Florentine edition of these hymns entirely agrees with that printed at Oxford. In 1602, Hercules Bottrigari mentioned the same hymns in his harmonical discourse, called *Melone*, printed at Ferrara, in 4to. But he derived his knowledge of these pieces, only from the Dialogues of Galilei; however, he inserted, in the beginning of his book, some fragments of them in common notes; but they were disfigured by a number of typographical errors.

At length, in the year 1720, M. Burette published these three hymns, in the *Memoirs of the Academy des Inscriptions, tome V.* from a copy found at the end of a Greek manuscript in the king of France's library at Paris, No. 3221, which likewise contained the musical treatises of Aristides Quintilianus, and of Bacchius senior. But though the words were confused, and confounded one with another, they appeared much more complete in this manuscript than elsewhere, particularly the hymn to Apollo, which had six verses more at the beginning; and that of Nemesis, which, though deficient at the end in all the other editions, was here entire, having fourteen verses, exclusive of the six first.

I was willing to give my readers all possible satisfaction with respect to the authenticity of these curious fragments, which have been sifted, collated, and corrected by the most able critics in the Greek language, as well as the most skilful musicians of this and the last century.

I shall avail myself of all their labours; and after presenting the reader with a copy of the original manuscript in the form it was at first discovered, that is, with the Greek musical characters over the words, I shall insert the same music in equivalent modern notes; and, lastly, shall venture to give an English paraphrastical translation of each hymn, with remarks upon the whole.

(f) In the copy of these hymns, published by M. Burette from the manuscript in the king of France's library, at Paris, the notes expressed by the small letters ρ σ are all capitals, like those in the printed diagrams of Alypius; and Vincenzo Galilei observes, that *Hypate Meson*, which in the Lydian mode is C, was expressed by Aly-

pius, not only with a small *sigma*, but a capital, and sometimes by this character C. The same thing happened likewise to *Parhypate Meson*, and to *Mese*. *Dial. della Musica Antica e Moderna*, p. 97.

(g) In the French MS. this is G ♯.

(b) In Burette this is D.

† Oxford MS.

DISSERTATION ON THE

HYMN to the Muse CALLIOPE.

O Muse beloved, Calliope divine,
The first in rank among the tuneful Nine,
Guide thou my hand, and voice, and let my lyre
Re-echo back the notes thy strains inspire.

And thou, great leader of the sacred band,
Latona's son, at whose sublime command
The spheres are tun'd, whom Gods and men declare
Sov'reign of song, propitious hear my pray'r.

ΥΜΝΟΣ ΕΙΣ ΑΠΟΛΛΩΝΑ.

HYMN to APOLLO.

Through nature's wide domain
 Let solemn silence reign :
 Let all the mountains, hills, and floods,
 The earth, the sea, the winds, and woods,
 The echos, and the feather'd throng,
 Forbear to move, or tune their song.

Behold

Behold the Lord of Light
Begins to bless our sight;
Phœbus, whose voice, divinely clear,
E'en Jove himself delights to hear;
Great father of the bright-ey'd morn,
Whose shoulders golden locks adorn!

Swift through the azure sky
O let thy courfers fly;
And with them draw that radiant car
Which spreads thy splendid rays afar,
Filling all space at thy desire
With torrents of immortal fire.

For thee, serene advance
The spheres, in solemn dance,
For ever singing, as they move
Around the sacred throne of Jove,
Songs accordant to thy lyre,
While all the heavn'ly host admire.

And when the God of day
Withdraws his golden ray,
Do thou, sweet Cynthia, bless our sight
With thy mild beams, and silver light;
Oh spread thy snowy mantle round,
And wrap the world in peace profound.

HYMN to NEMESIS (k).

Avenging Nemesis, of rapid wing,
 Goddess of eye severe, thy praise we sing :
 Against thy influence, ruler of our lives,
 Daughter of Justice, man but vainly strives.
 'Tis thine to check with adamantinè rein
 The pride of mortals, and their wishes vain ;
 Of insolence to blunt the lifted dart,
 And drive black Envy from the canker'd heart.

Still at the pleasure of thy restless wheel,
 Whose track the Fates from human eyes conceal,
 Our fortune turns ; and in life's toilsome race
 'Tis thine, invisible, our steps to trace ;
 To strew with flow'rs, or thorns, the doubtful maze,
 And by thy rule to circumscribe our days.

Insulting tyrants, at thy dire decree,
 Bow the proud head, and bend the stubborn knee :
 Inflexible to each unjust demand
 Frowning thou hold'st thy scales with steady hand.
 Incorruptible judge, whom nought can move,
 Nor less infallible than mighty Jove :
 Great guardian ! ever watchful, ever near,
 O sacred minister of justice, hear !

Avenging Nemesis, of rapid wing,
 Goddess of eye severe, thy praise we sing.
 And let Astræa, thy companion, share
 Our pious praises, and our fervent pray'r.
 She mounts the skies, or plunges into hell
 With rapid flight, the deeds of man to tell ;
 Dread Justice ! whose report has power t'assuage
 The wrath of Gods, and calm infernal rage.

(k) In the first chorus of the *Electra* of Sophocles, there is a fine description of this goddess ; and among the poems at-

tributed to Orpheus there is a hymn to Nemesis, Ω Νεμεσι, κληζωσι θεα βασιλεια με- γινη.

Though.

Though the Oxford editor of Aratus is of opinion that these three hymns were all written by a poet called Dionysius; yet as thirteen or fourteen Greek poets of that name are mentioned by ancient authors, the determining to which of them these hymns appertain, would be difficult. Besides, the hymn to Nemesis is by some attributed to a poet named *Mesodmes*, who flourished under the emperor Justinian; but M. Burette thinks the name *Mesodmes*, corrupted from *Mesomedes*; and Capitolinus in his Life of Antoninus Pius, mentions a lyric poet of that name, from whom that emperor withdrew part of a pension granted to him by Adrian, for verses which he had written in praise of his favourite Antinous. This circumstance is likewise mentioned by Suidas; and Eusebius, in his Chronicle, speaks of Mesomedes, as a poet originally of Crete, whom he calls *κιθαρωδικων νομων μεσικος ποιητης*, which agrees very well with the author of the hymn in question. But whoever were the writers of these pieces, it is certain that the last, addressed to Nemesis, is more ancient than Synethius, a father of the church, who flourished four hundred and twelve years after Christ; and who, in his ninety-fifth letter, quotes three verses from it, as from a hymn that was sung in his time to the sound of the lyre; and it is likewise certain that the composition of this hymn, as well as of the other two, bears strong marks of having been written at a time when Greek poetry was still flourishing.

The specimens of ancient music are so rare, that the few which remain cannot be too carefully collected, or discussed too minutely. M. Burette, after enumerating all the Greek poets of the name of Dionysius, and specifying the works that have been attributed to them, fixes upon Dionysius surnamed *Iambus*, as the author of the two first hymns, to which the original music has been preserved. This author is quoted by Plutarch (l), and by Clemens Alexandrinus (m). From whence

(l) De Musica.

(m) Strom. lib. V.

it may be concluded that this poet, though the exact time when he flourished is unknown, was certainly more ancient than Plutarch. M. Burette pushes conjecture still further, and supposes that this Dionysius was even more ancient than Dionysius of Thebes, the music-master of Epaminondas, according to Cornelius Nepos, and whom Plutarch, from Aristoxenus, in his Dialogue on Music, ranks among the most illustrious lyric poets of antiquity; such as Lamprus, Pindar, and Pratinas. And in this case the hymns to Calliope and Apollo are not only more ancient than that to Nemesis, attributed to Mesomedes, but of the highest antiquity. It is likewise the opinion of M. Burette, that the music of these hymns is nearly as ancient as the hymns themselves.

I shall not trouble the reader with all my reasons for the several changes and deviations from former editions, that occur in the manner of printing these melodies; it seems only necessary to say that they have been made from the best copies and authorities I could procure. Three things, however, are particularly to be considered with respect to this music: the *Notes*, or characters, by which they are expressed; the *Melody*, or air; and the *Rhythm*, or measure.

I. *Of the Notes of the Ancient Music to the Hymns.*

Of the fifteen sounds in the ancient system of music, only ten are employed in the melody set to these hymns, and these are the ten lowest, according to our method of reckoning. As to the notes which express these sounds, they are eleven in number, because two of them, Γ and Ε, serve to express the same sound in two different relations. In the Oxford edition of the first hymn, five notes were wanting, which have been supplied from the manuscript in the king of France's library, and from the copy given of it in the *Memoirs of the Academy of Inscriptions*, by M. Burette. Some

other corrections have been made, by comparing the vocal notes of the Lydian mode, in which these hymns are composed, with the instrumental, which used to be placed in a separate line under the vocal.

2. *Of the Modulation, or Melody of this Music.*

It was discovered that these three hymns were sung in the Lydian mode of the Diatonic genus, by comparing the notes with those given by Alypius in his catalogue of the characters used in that mode, which, in counting from the bottom, was the tenth, among the fifteen ancient modes. All the commentators, except Sir Francis Eyles Stiles, seem certain that these fifteen modes only differed from each other by a semitone; so that, supposing the lowest string, or sound of the lowest mode or key, which was called the *Hypodorian*, corresponded with our A on the first space in the base; it follows, that the lowest sound of the Lydian mode answered to F sharp on the fourth line in the base, and the highest sound to F sharp on the fifth line in the treble, which extended to two octaves, the compass of the ancient system of music. However, it must not be concluded from hence that these three hymns are in F sharp, according to the modern musical language. They are supposed to be in the Lydian mode, only on account of the melody being confined within the limits of the two octaves appropriated to this mode; and not because the three essential sounds, which, in modern music, are the key note, third, and fifth, frequently occur.

It has already been observed, Section IV. that the *medius*, or middle sound, in all the ancient modes, is a minor, or flat third. Indeed the melody of the two first hymns begins and ends upon the fifth of the Lydian mode; that of the third hymn begins upon the octave of the first sound of the mode; but as the music of only the five first verses, and half the
sixth

fixth is preserved, we are ignorant upon what sound this melody ended.

According to the system of modern music, the first hymn begins in the key of C#, with a minor third; the second in the key of F# minor; and what remains of the last hymn, seems to be in the key of A with a sharp third, as the first note, F#, would be only regarded as an *Appoggiatura* by most modern musicians. But why M. Burette, and, after him, all future editors of this music, except M. Marpurg, have printed the third hymn with *four* sharps, and yet pronounced it to be in the Lydian mode, which has no D# belonging to it, I know not; as D is always natural throughout this fragment.

These melodies, though no other sounds are used in any of them than what belong to the Lydian mode, yet very frequently change the key, according to modern language and ideas; which shews what a different sense from ours the ancients annexed to the term *mode* or *key*. They only understand by it a certain degree of elevation, or acuteness, in the general system of their music, in which the sounds always followed in the same order; whereas in ours, keys are distinguished from each other, not only by their situation in the scale with respect to high and low, but by their different arrangement with respect to mutable intervals, such as thirds and fixths, which constitute major and minor, or sharp and flat keys, besides the different modifications that these keys receive from temperament, which in instruments, whose tones are fixed, are characterized and diversified by a greater or less degree of perfection in the intervals and concords, though all the intervals of major and minor keys are nominally, and essentially the same.

As to the order and succession of sounds in the ancient melody of these hymns, some of them are repeated several times together, and in some places as often as six or seven, and even nine times; others move in conjunct or disjunct degrees, af-

ascending or descending, and these disjunct intervals are by a major, or minor third, a fourth, a tritonus, a fifth, sixth major or minor, a seventh, eighth, ninth, or tenth. Through all the simplicity of these melodies, which somewhat resemble the *Canto Fermo* of the Romish church, it appears that the musician, by the arrangement of sounds, aimed at the expression of the words. Something also seems to be indicated in this music like *Appoggiaturas*, by two notes, which are sung to one and the same syllable, sometimes ascending and descending by regular degrees, sometimes by leaps of a sixth, and even a tenth, which in simple melody is very extraordinary (*n*). Though it has been said, Section VI. that only one note was sung to one syllable, yet here we often find two notes to a *long syllable*; but then they are constantly two *short notes*, which amount but to the natural length of the syllable. Upon the whole, these melodies are so little susceptible of harmony, or the accompaniments of many parts, that it would be even difficult to make a tolerable base to any one of them, especially to the first.

3. *Of the Rhythm, or Time, in this Music.*

The *Rhythm*, or cadence of these hymns, though correspondent to the different feet of the verses in which they are written, is not always regular; but in the hymn to Calliope it is sometimes in common time, and sometimes in triple. M. Burette was the first who divided the time by bars, in the modern manner; but as the accents and long syllables in his copy frequently occur upon short notes, and unaccented parts of the bars, I have ventured to divide the measure in such a manner as seemed best to make the accent of the music coincide

(*n*) These *Appoggiaturas*, or short notes, are always upon the circumflex. Some of them bring to mind a fault very common in bad English singing, in which

violent force is frequently given to leanings upon remote and dissonant notes, without grace or meaning.

with

with the quantity of the verse, in which we are taught to think the Greeks were very exact.

It would be difficult to write the music of the Dithyrambic to Calliope in one measure, on account of the different kinds of verse; but the *rhythm* seems sufficiently ascertained by the word *Ιαμβος*, which is written at the title of the manuscript, and by the Greek syllable *σπον*, for *σπονδειος*, placed between the first and second verse in all the three manuscripts, just above the word *μολπης*, where two notes were wanting in the music. These two words probably imply that the *rhythm* is partly in the iambic measure, or triple time, and partly in spondees and dactyls, which are equally in common time.

It has always appeared to me as if M. Burette was mistaken in supposing the second and third hymns to be in triple time. The melody seems more marked, and the words better accented, by singing them in common time; and it looks on paper more like music of this world. However, candour requires that the reasons alledged by M. Burette for printing them in triple time should be given.

“ I have reduced these hymns, says this author, to our measure of common and triple time, always placing a rest or pause at the end of each verse. This mixture and variety of measure, which is always exactly proportioned to the quantity of the syllables in the poetry, contributes greatly to the *energy* and *expression* of the melody (o).”

(o) This is an assertion that I cannot possibly pass uncontroverted; for most of the musicians in Europe, except those of France, will absolutely deny the truth of it, and, on the contrary, will affirm, that the frequent change of time in the music of the serious French opera, relaxes the measure, and destroys all idea of the accent and energy by which every phrase in good melody is constantly marked. By two or three bars being in common time, and two or three in triple, as is generally

the case in the operas of Lulli and Rameau, the hearer can retain no fixed or precise idea of either: the passages in one mutually destroying the effects of the other; for the traces are either lost, or so slightly impressed in the memory, that the work is always to begin anew. The chief superiority of modern melody over that of former times, is certainly due to the graceful arrangement of sounds, and the exact and continued manner with which they are enforced by the measure, and the accentuation.

M. Burette continues to acquaint us that he found out the rhythm of the hymn to Apollo, by a note written in red ink, on the margin of the king of France's manuscript, in the following words: Γένος διπλασιον, ὁ ῥυθμος δωδεκάσημος; and above these words, the mark for the iambic, expressed by the usual characters ~ -. By which he understands that the *rhythm* of this piece of poetry is in the double genus, or the iambic, which is the same thing; for in this measure, the latter portion has only one syllable or note, and the former two, or those proportions. This *rhythm* is composed of twelve syllables, or parts, equivalent to twelve short notes, or what we should call twelve *breves*, compared with six *longs*, or twelve crotchets opposed to six minims; so that there are four for the *up*, or last part of a bar, and eight for the *down*, or first part, and the contrary, each verse making one *rhythm*, or measure; which, however, may be divided into two parts, or bars; and this method M. Burette has pursued, keeping always the same proportions.

But the marginal directions for the time, written in red ink upon the French manuscript, are, in all probability, modern; and it amounts to the same thing if the verse be divided into three parts, which has been done in writing the hymns in common time. There is no one of the verses, however, which does not contain more in quantity than twelve *breves* or crotchets, and, indeed, some of them include fourteen or fifteen, which, from the strict adherence to poetical quantity in the music, must render the time loose and disjointed; but regarding the redundant syllables as *odd notes*, the verses all run thus: ~ - | ~ ~ ~ | ~ ~ ~ | ~ - | or sometimes | ~ ~ | ~ ~ | which renders a sudden change to triple time necessary; a change which always convulses the hearer.

tuation of the bars. The difficulty of distinguishing the airs from the recitatives in the old music, particularly the French, is

owing to the frequent change of measure, and the want of accent in the bars and musical phrases.

But

But I must give an account here of some alterations that have been made in the text, for the sake of the music, by the advice of a friend, to whose opinion I have frequently appealed in matters of erudition. In the first hymn, M. Burette has made all the syllables short, in the word *προκατᾶγεται*; but the second alpha is long: for the word, out of its Doric dress, is *προκατῆγεται*, *leader*. This mistake has made the melody more awkward than it need be, for which there was no occasion. In the second hymn, *ὕπ' ἰχθυεσι*, disturbs the metre, and *syn-copates* the music; but by inserting another sigma, as the poets frequently do, and separating the iota from the rest of the word, as is likewise often practised, all will be right; for a vowel before a mute and a liquid, *χν*, may be either short or long.

- | - ~ ~ | - ~ ~ | - -
ΠΤΑΝΟΙΣ ὕπ' ἰ-ΧΥΕΣΣΙ δι-ΩΚΕΙΣ.

I know not whether justice has been done to these melodies; all I can say is, that no pains have been spared to place them in the clearest, and most favourable point of view: and yet, with all the advantages of modern notes and modern measure, if I had been told that they came from the Cherokees, or the Hottentots, I should not have been surprised at their excellence. There is music that all mankind, in civilized countries, would allow to be good; but these fragments are certainly not of that sort: for with all the light that can be thrown upon them, they have still but a rude and inelegant appearance, and seem wholly unworthy of so ingenious, refined, and sentimental a people as the Greeks; especially if we subscribe to the high antiquity that has been given to two of the hymns, which makes them productions of that period of time when arts and sciences were arrived in Greece at the highest point of perfection.

I have tried them in every key, and in every measure that the feet of the verses would allow; and as it has been the
opinion

opinion of some, that the Greek scale and music should be read Hebrew-wise, I have even inverted the order of the notes, but without being able to augment their grace and elegance. The most charitable supposition therefore that can be admitted concerning them is, that the Greek language being in itself musical, wanted less assistance from sound than one that was more harsh and rough: and music being still a slave to poetry, and wholly governed by its feet, derived all its merit and effects from the excellence of the verse, and sweetness of the voice that sung, or rather recited it. But, *as music*, there needs no other proof of the poverty of ancient melody than its being confined to long and short syllables. We have some airs of the most graceful and pleasing kind, which will suit no arrangement of syllables to be found in poetical numbers, ancient or modern; and which it is impossible to express by mere syllables in any language with which I am at all acquainted.

I come now to speak of a fourth piece of ancient Greek music, inserted in the *Musurgia* of Kircher, p. 542; from whence it was transcribed by the Oxford editor of Aratus, and published with the three hymns above mentioned. Father Kircher has been very truly called *vir immensæ quidem, sed indigestæ admodum eruditionis*: a man of immense, but indigested, learning. It was very natural to suspect the authenticity of a fragment of this kind coming from one, who, though he had displayed great learning in the number of huge volumes which he published, yet, was always careless, inaccurate, and credulous; collecting, without choice or discernment, whatever he found relative to the subject upon which he was writing; and adopting whatever was offered to him, true or false, provided it contained any thing marvellous.

In his *Musurgia*, printed at Rome, 1650, in folio, after giving an account of the Greek musical characters, from Alypius, he tells us, that “nothing now remains for him to
do,

do relative to ancient music, but to give a genuine specimen of it, which he supposed the more necessary, as no one had hitherto thought fit to satisfy the eager curiosity of the learned upon a subject so interesting, and so utterly unknown." From this passage it appears, that the manuscripts published by the two Italian authors, Vincenzo Galilei, and Ercole Bottrigari, had escaped the researches of father Kircher, though both much anterior to him, the one appearing in 1581, and the other in 1602.

However, the specimen of ancient Greek music which father Kircher gives us, is the more interesting, as he tells us that it had never been edited before, but was found by himself in the famous Sicilian library of the monastery of St. Saviour, near the port of Messina. He calls it a very ancient fragment of Pindar; it is accompanied with the ancient Greek musical notes, which are the same as Alypius attributes to the Lydian mode. Unluckily, what our good father calls a *very ancient fragment* of Pindar, was nothing more than the first eight verses of the first Pythic of this poet; which gives no very favourable idea of his acquaintance with the ancient poets.

However, to remove all doubt concerning the authenticity of this manuscript, with respect to the music, the catalogue of Greek manuscripts in St. Saviour's library was examined, as published in Latin by P. Possevin, but without success. At length, application was made by M. Burette to father Montfaucon, who was known to be in possession of copies of all the most valuable manuscripts in the principal libraries of Europe; and among these the manuscripts of St. Saviour's library had not been forgotten. But in consulting the catalogue of these, they were found to consist chiefly of the writings of the Greek fathers, with fewer prophane authors than are mentioned in the catalogue published by Possevin. However, in the last article were found the following words: Πολλα δε αλλα

βιβλία περιέχουσιν τὰ πάντα περὶ τῆς χορῆς; that is, *there are still many books in manuscript relative to the choral service*, which must mean *church music*. It was doubtless, says M. Burette, among such manuscripts as these, that father Kircher discovered the fragment of an Ode of Pindar set to music, as it seems the natural place for such a relic to be found, and it is in vain to seek for a further justification of the editor.

Of these eight verses of the first Pythic of Pindar, which were found with such ancient musical characters over them, as belong to the Lydian mode (*p*), the four first have a melody set to them for one or many voices; the four last compose a different melody, at the beginning of which were the following Greek words: *χορὸς εἰς κιθάραν*; *chorus sung to the sound of the Cithara*; and over the words of each verse are written the characters peculiar to instrumental music; which shews that the second melody was not only executed by voices, but accompanied by one or more *Citharas*, that played in unisons, or octaves, to the voice. The melody of these eight verses is extremely simple, and composed of only six different sounds; which is a cogent proof of the antiquity of the music, since the lyre of seven strings had more notes than were sufficient for its execution.

ODE of PINDAR.

The musical notation consists of two staves. The first staff has a treble clef, a key signature of one flat (B-flat), and a time signature of 3/4. It contains eight measures of music. Above the notes are Greek characters: ΟΥ ΟΥ ΓΘ ΙΟΥ ΓΘ ΙΟΥ ΘΙΜ Ι ΘΙ. Below the notes are the lyrics: Χρυ-σε—α φορ—μιγξ, Α—πολ--λα--ιθ, κ' ι—οπλ:κα-μων, Συν-δι—ΜΙ ΘΓΘ Γ ΟΥ Γ ΘΙ ΓΘΙ ΘΓ ΜΙ. The second staff also has a treble clef, a key signature of one flat, and a time signature of 3/4. It contains eight measures of music. Above the notes are the Greek characters: ΜΙ ΘΓΘ Γ ΟΥ Γ ΘΙ ΓΘΙ ΘΓ ΜΙ. Below the notes are the lyrics: —κιν.Μοι—σαν κτεκ—ρον, Τας α—κρ--ει μιν βασις αghai—ας αβ.

(*p*) If it were not for the musical characters over the notes, which belong to the Lydian mode, this melody might with

more propriety be said to be in the Phrygian mode.

This Ode has been happily translated by Mr. West.

Part of the first Pythian O D E.

Hail, golden lyre ! whose heav'n-invented string
To Phœbus, and the black-hair'd Nine belongs ;
Who in sweet chorus round their tuneful king
Mix with thy founding chords their sacred songs.
The dance, gay queen of pleasure, thee attends ;
Thy jocund strains her list'ning feet inspire :
And each melodious tongue its voice suspends,
'Till thou, great leader of the heav'nly quire,
With wanton art preluding giv'st the sign—
Swells the full concert then with harmony divine.

WEST'S Pindar, Vol. I. p. 84.

The music, reduced to modern notes, is manifestly in the key of E minor, as appears from the modulation and final note. The first part begins upon the fifth of the key, the second upon the third. Most of the closes in the course of the melody are made, not as is usual with us, by the sharp seventh of the key, but in ascending by a whole tone from the

seventh to the eighth ; a kind of cadence very common among the Oriental people ; at least, if we may judge by some Persian airs brought into Europe by the missionaries, of which most of the closes are of that kind ; and in none of the most ancient ecclesiastical chants is the sharp seventh to be found.

With regard to this melody, it was reduced to common notes by M. Burette, in the *Memoires de l'Academie des Inscriptions*, tome V. with all possible care, though somewhat different from father Kircher's copy, inserted in his *Musurgia*. The reasons for deviating from this father are the following : in the first place he had written it in G with a minor third ; that is to say three notes higher than the original will allow ; secondly, he had made several mistakes in the melody, which have been adjusted by the Greek tablature ; and lastly, he had observed no kind of *rhythm*, or measure, whereas it is now minutely attended to, and exactly conformable to the quantity of syllables which answer to the musical notes. Indeed the *rhythm* could not be made regular, the feet of the verse being a mixture of dactyls and iambics.

This melody however is so simple and natural, that by reducing it to regular time, either triple or common, and setting a base to it, which it is very capable of receiving, it will have the appearance and effect of a religious hymn of the present century.

Dr. Brown, or ^{*}whoever was author of the Letter concerning the Music of the Ancients, addressed to Mr. Avison, and annexed to the second edition of his *Essay on Musical Expression*, was somewhat unfortunate, when in his wishes for a specimen of ancient Greek melody he fixed upon Pindar's first ode; the only piece of Greek poetry generally known, in which these wishes might have been gratified. "If, says he, "we had the old musical notes which were set to any particular *ode* or *hymn* that is extant, I should not despair of "finding out the length of each note; for the quantity of "syllables would *probably* be a tolerable guide (q); and I "would consent to truck the works of Signor Alberti for the "tune that was set to Pindar's

Dr. Jortin

Χρυσέα φορμιγξ Ἀπολλωνος—"

This author goes on informing us by his conjectures concerning what the Greek melody was, that he had never heard

(q) It is the *only* guide to the length of ancient notes.

of the specimens which had been published of it by Vincentio Galilei, Bottrigari, Kircher, the Oxford editor of Aratus, or by M. Burette, in the *Memoirs of the Academy of Inscriptions*.

In the postscript, however, he mentions the Oxford edition of Aratus; but what use has he made of it, except to tell us that he saw there “some learned observations on ancient music, “and a few fragments of ancient tunes to some Greek odes “and hymns, reduced to our modern *notation*?”

Was not this the time and place to tell us what this music was? how far it excelled the modern? and that he was still ready to sacrifice the elegant works of poor Alberti for so invaluable an acquisition as the *tune* that was set to his favourite ode of Pindar? Not a word escapes from the author concerning his raptures upon seeing in venerable Greek characters, as well as in sharp-cornered Gothic notes, this divine music, nor of the effect it had on his passions when he heard it performed; he only tells us that “it came into his mind he “had perused it long ago; and upon looking now in the “book, he found two remarks of the editor, agreeing with “his own notions, about *time, quantity, and simplicity*.”—He could not submit either to the humiliating task of confessing that he did not understand this music; or that its excellence did not at all correspond with the high ideas he had, unheard, and unseen, formed of it.

I shall bestow a word or two more upon this Letter, now I am on the subject. The author supposes that “one great advantage which arose even from the simplicity of the ancient tunes, and which greatly set off their concert of vocal and instrumental music, was, that the singer could be understood, and that the words had their effect as well as the music; and then the charms of elegant and pathetic poesy, aided and set off by the voice, person, manner, and accent of the singer, and by the sound of instruments, might affect the hearer very strongly.” We do not, however, often

ten find this to be the case with Italian recitative, though it more than answers this description in every particular, when the poesy is Metastasio's, and the singer, besides his fine voice, figure, and action, possesses the most exquisite taste and expression. For even, at such time, the audience is, in general, yawning and languishing for the air, which, by its superior sweetness in melody to recitative, makes them forget poesy, declamation, propriety, and every thing but their ears. A line of recitative, ever so pathetically, or emphatically pronounced, seldom extorts that thundering applause from an audience, which is bestowed on a great actor for speaking only two or three words; though an air sung by the same performer, whose recitatives had been heard with coldness and indifference, is honoured with rapturous applause, and an universal *encore*!

The author, in speaking of "the harmonious and unrivalled sweetness of the Greek language, says, as the Latin tongue surpasses ours in sweetness, so the Greek surpasses the Latin. When I taught my little boy his Greek nouns and verbs (says Tanaquil Faber), he told me one day a thing that surprised me, for he had it not from me. Me thinks, said he, the sound of the Greek tongue is much more agreeable than that of the Latin. You are in the right, said I.—By this I perceived that the boy had a good ear, which I took as a *presage that his taste and his judgment would one day be good*; having often observed that this is one of the earliest and best marks of a child's capacity." This observation is, in my opinion, so unphilosophical and wide of the truth, that it should only have been mentioned by our author to censure it. A good ear in a child may be a presage of his genius for music; and there have been many great musicians without taste or judgment in any thing but their own profession. But some of the wisest men, and of the greatest talents, in other particulars, I am sorry to say it, have not had

ear.

ear enough for music to discover the difference, not only between good and bad music, but between one tune and another. And yet these great and wise men, in other particulars, think themselves qualified to write, talk, and decide, about music, in a more peremptory manner, than those of the greatest feeling and genius, who have long made it their particular study. Poor human nature is never to be perfect: however, the musician pities the man without ears; and the man without ears, in revenge, heartily contemns the fiddling fool, who can be delighted with such nonsense.

S E C T I O N VIII.

Whether the Ancients had Counterpoint, or Music in Parts.

THIS is a subject which has given birth to many learned disquisitions and disputes; and as it long remained a mere matter of opinion, those who believed, and those who denied the point in question, consequently treated each other with all due polemic acrimony. The champions for antiquity thought themselves involved in the controversy; and whether they were possessed of musical knowledge, or were sensible to the charms of harmony, or no, they determined to regard every man as an enemy to sound literature, who did not subscribe to the articles of their faith.

A poem, called *Le Siecle de Louis le Grand*, written by Charles Perrault of the Academy of Sciences, and brother to Claude Perrault, the famous physician and architect, occasioned the long and violent dispute between him and Boileau, and soon brought on a general war among the learned throughout Europe, concerning the superiority of the ancients or moderns, with respect to arts, sciences, and literature. This piece was first read by the author at the Academy of Sciences in
1687,

1687, and was soon followed by his *Parallele des Anciens et des Modernes*. The notes to Boileau's translation of Longinus were intended as a reply to Perrault; and are full of bitter invectives, not only against him, but the moderns in general. Racine, La Bruyere, and Fontenelle, took sides in the quarrel, which in France was kept alive, with great animosity, for near thirty years.

In England, the controversy between Sir William Temple and Mr. Wootton, Mr. Boyle and Dr. Bentley, and Swift's *Battle of the Books*, were consequences of this quarrel.

Those who had written *ex professo* on music, had frequently differed in their opinions concerning counterpoint having been known by the ancients, previous to the learned, in general, interesting themselves in the dispute; and before I give my own opinion, as an individual, it is incumbent on me, as an historian, to lay before my readers the sentiments of others, and the reasons, or prejudices, upon which they were founded. Many who doubt of far more important points, though such as human evidence can never determine, would, however, be glad to have them demonstrated. I have read and considered the several arguments which have been urged for and against the question, with a mind open to conviction, and certainly free from prejudice *against* the ancients; for, on the contrary, I have always admired and revered them in the models they have given us in every species of writing, as well as in the beautiful remains of their sculpture, painting, and architecture, and therefore should most willingly contribute my utmost in support of their claims to a melody and harmony superior to our own, if there were facts sufficiently numerous, clear, and indisputable, to found them upon.

However, as the whole dispute, at this distance of time, from the perishable materials upon which the ancient symbols of sound were traced, rests upon *conjecture*, or at most upon presumptive proof; and as I have no favourite hypothesis to

support, which would incline me to give *all* the evidence in favour of *one side*, and conceal, or misconstrue, whatever would be for the advantage of the other; I shall put into two honest and even scales all that can be urged in support of *both sides*, and then suspend them by the balance, as steadily as *Justice* will enable me, in order to let the reader see, and judge for himself, which of them preponderates.

The most eminent writers on the side of ancient *counterpoint* are, Gaffurio, Zarlino, Gio. Battista Doni, Isaac Vossius, Zacharia Tevo, the abbé Fraguier, and Mr. Stillingfleet, author of *Principles and Power of Harmony*.

Those against it are, Glarianus, Salinas, Bottrigari, Artusi, Cerone, Kepler, Mersennus, Kircher, Claude Perrault, Wallis, Bontempi, Burette, the fathers Bougeant and Cerceau, Padre Martini, M. Marpurg, and M. Rousseau.

Claude Perrault, and M. Burette, indeed, seem inclinable to grant it them *by thirds*; and M. Marpurg by *fourths* and *fifths*.

The learned father Martini has collected many of the depositions of the several writers on both sides, with great accuracy and fairness; but as I am in possession of all the books he quotes, and of others, which it will be necessary to mention in the course of the dispute, I shall give some account of each, before I sum up the evidence.

Gafforius Franchinus flourished in the fifteenth century; his writings were the first that came from the press, upon the subject of music, after the invention of printing. One of them, under the title of *Theoricum opus Armonice Discipline*, was published at Naples, 1480; but that in which he allows the ancients to have known counterpoint, appeared first at Milan, 1496, and afterwards at Brescia, 1502; this has for title, *Practica Musicae utriusque Cantus*.

This author quotes Bacchius senior as his authority for the ancients having practised simultaneous harmony; but unluckily not a single word can be found in that writer, which has the
least

least allusion to the subject. Counterpoint, as Bontempi observes, is the *Practice of Harmony*, and Bacchius senior, in his *Introduction to the Art of Music*, only treats of the *Theory of Melody*.

Zarlino (a) supposes it impossible for the ancients to have made use of instruments of many strings, without playing in consonance; and that the hydraulicon, or water-organ, must have afforded them opportunities of discovering and using different parts. In answer to the first supposition of the ancients having many strings upon the lyre, this did not happen till several ages after its invention, as at first the number was only 3, 4, 5, 7, or 8; but we might oppose to the ancient lyre of many strings, the Irish harp, which long had a greater number than the lyre, and yet these did not suggest to the performers upon the harp, the idea of counterpoint, or of playing in parts; as that instrument remained many ages a single or treble instrument, used only for the purpose of playing a simple melody, or single part.

This is not the place in which to discuss the second point; in a future chapter, upon the instruments of the ancients, I shall endeavour to give my readers some idea of the hydraulicon: the use made of it by Zarlino comes under those presumptions in favour of ancient harmony, which having no other support than conjecture, can never amount to demonstration. However, if the first idea of an organ was taken from the *Syrinx*, or *Fistula Panis*, which, after being improved into *Tibiæ utriculares*, or bagpipes, was further perfected by the addition of keys, as is the opinion of Bartolinus and Blanchinus, it must have been a long time before that instrument was capable of being played in parts, supposing counterpoint to have been in use; and if the hydraulic organs,

(a) *Supplimenti Musicali*. Venet. 1580.

still to be found in Italy, are remnants of the ancient, they will furnish no very favourable idea of their powers.

John Baptist Doni, a Florentine nobleman, who flourished in the last century, spent the greatest part of his life in the study and defence of ancient music. His writings and opinions were very much respected by the learned, though but little attended to by practical musicians; on which account most of his treatises, which are very numerous, are filled with complaints of the ignorance and degeneracy of the moderns, with respect to every branch of music, both in theory and practice.

It is no uncommon thing for philosophers, mathematicians, and men of letters, absorbed in mere speculation, to condemn in their closets, unheard and unseen, the productions and performance of practical musicians; who, in their turn, condemn whatever theory suggests as visionary, and inadmissible in practice, without giving themselves the trouble to consider, or even to read, the principles upon which an hypothesis may be founded.

“ Brother, brother, we are both in the wrong,” is a concession that many disputants might make, with great truth, besides Peachum and Lockit.

It seems as if theory and practice were ever to be at strife; for the man of science, who *never hears music*, and the musician, who *never reads books*, must be equally averse to each other, and unlikely to be brought to a right understanding.

That Doni was but little acquainted with the music which delighted the ears of his contemporaries, appears in many parts of his works; and as to his belief that the ancients knew and practised counterpoint, and that their music was superior to the modern in every particular, it seems to have been founded upon no better grounds than that of his predecessors, Gaffurio, and Zarlino: but if it was such as Doni has imagined, and given in example, the ears of mankind, to have been delighted with it, must have been differently constructed formerly,

formerly, from those of the present times, which are pleased with modern harmony.

This writer seems full of inconsistencies, with respect to ancient counterpoint. He is unwilling that the Greeks and Romans should be deprived of it; and yet, in speaking of its use among the moderns, he calls it *nemico della musica*. His reasons for allowing it to the ancients are chiefly drawn, from their vocal notes being different from the instrumental; from the early invention of the hydraulic, and other organs; from the numerous strings upon some of their instruments; and from a striking passage in Plutarch (*b*), which he thinks decisive, as it proves, that though the most ancient musicians used but few strings, yet these were tuned in consonance, and disposed with as much art as in our instruments at present. These points will be severally considered in the course of this section.

Doni left behind him at his death, besides many printed works upon ancient music (*c*), a great number of unfinished essays and tracts relative to that subject, and the titles of many more. Few men had indeed considered the subject with greater attention. He saw the difficulties, though he was unable to solve them. The titles of his chapters, as well as many of those of father Merfennus, and others, are often the most interesting and seducing imaginable. But they are false lights, which like *ignes fatui*, lead us into new and greater obscurity; or like those specimens of fruit brought from the *Land of Promise*, which those in whom they excited the strongest desire, never lived to see.

The next Champion for ancient harmony was Isaac Vossius, who is greatly admired for his elegant and classical Latin, and more frequently quoted in favour of ancient music, than any other modern who has treated the subject; but *good writing*, and *fair reasoning*, are sometimes different things; that is, a selection of well-sounding words, formed into harmonious periods, may subsist without the support of either truth, or logic. Vossius, in his celebrated book (*d*), seems more ready to grant every possible and

(*b*) Περὶ Μουσικῆς.

(*c*) *Compend. del Tratt. de' Generi e de' Modi della Musica. De præstantia Musicæ*

Veteris; and particularly his *Discorso sopra le Consonanze*.

impossible

impossible excellence to the Greek musicians, than, when alive, they could have been to ask. None of the poetical fables, or mythological allegories, relative to the power and efficacy of their music, put the least violence upon his credulity. A religious bigot who insists upon our swallowing implicitly every thing, however hard of digestion, is less likely to make converts to his opinions, than he who puts our faith to few trials; and Vossius overcharged his creed so much, that it is of no authority.

He does not attribute the efficacy of the Greek and Roman music to the richness of its harmony, or the elegance, the spirit, or pathos, of its melody, but wholly to the force of *Rhythm*. "As long, says he, p. 75, as music flourished in this *Rhythmical form*, so long flourished that power which was so adapted to excite, and calm the passions." According to this opinion there was no occasion for melodious sounds, or lengthened tones; a drum, a cymbal, or the violent strokes of the Curetes, and Sali, on their shields, as they would have marked the time more articulately, so they would have produced more miraculous effects than the sweetest voice, or most polished instrument. In another place he tells us, that "to build cities, surround them with walls, to assemble or dismiss the people, to celebrate the praises of Gods and men, to govern fleets and armies, to accompany all the functions and ceremonies of peace and war, and to temper the human passions, were the original offices of music: in short, ancient Greece may be said to have been wholly governed by the lyre (*e*)."

It appears from this passage, and from the tenor of his whole book, that this author will not allow us to doubt of a single circumstance, be it ever so marvellous, relative to the perfection and power of ancient music; the probable and the improbable are equally articles of his belief; so that with such a lively faith it is easy to imagine that he ranks it among mortal sins to doubt of the ancients having invented and practised *Counterpoint*; and he consequently speaks with the highest indignation against the moderns, for daring to deny that they

(e) *Urbes condere, mœnia moliri, conciones advocare et dimittere, Deorum et virorum fortium laudes celebrare, classes et exercitus re-*

gere, pacis bellicæ munia obire, &c.—Lyra est quæ veterem rexerit Græciam. P. 47.

were

were in possession of a simultaneous harmony, though, according to him, they used it with such intelligence and discretion, as never to injure the poetry by lengthening, shortening, or repeating words and syllables at their pleasure, nor by that most absurd of all customs, singing different words to several different airs at the same time.

This author's remarks, however, on the little attention that is paid by modern composers to prosody, merit some respect. He has already been quoted in the section upon *Rhythm* (*f*), and will, perhaps, more than once be occasionally mentioned in the course of this work. With regard to the present question, whether the ancients had counterpoint or not, he cites the usual passages in their favour from Plato, Aristotle, Cicero, and Seneca, all which will be allowed due attention farther on.

The name of Zaccharia Tevo is but little known, though he is an ingenious and candid writer, who has read good books, and reflected deeply on the subject of music (*g*). However, as he is a favourer of ancient counterpoint, whose name appears in the list of its champions, he shall have a few words bestowed upon him among the rest.

This author very modestly styles himself a collector and compiler of the opinions of others concerning ancient harmony. Indeed new materials can now hardly be expected; new conjectures are all that time, and the many writers who have already handled the subject, have left. After citing passages from the most respectable writers of antiquity, which seem to favour the side of counterpoint, and giving the sentiments of the most eminent moderns upon these passages, he concludes, that "from the minute and accurate description of concords by ancient authors, it is natural to suppose that they were not unacquainted with the use of them." But it is as necessary to know, and to ascertain intervals in *melody* as in *harmony*,

(*f*) Page 82.

(*g*) *Il Musico Teftore*, or the *Composer*, was published by him at Venice, 1706.

otherwise

otherwise there can be no truth, or certainty, of intonation; and this author dissembles the difficulty of thirds and sixths being ranked among the discords by ancient theorists. It is his opinion, however, that harmony was known before the time of Plato and Aristotle; but that it was lost with other arts and sciences during the barbarism of the middle ages, and afterwards, about the year 1430, according to Vincentio Galilei, was renewed, enlarged, and reduced to fixed and certain rules, which for the most part remain in force at present. Indeed all that he says may be allowed to the ancients, without putting them in possession of such harmony as ours, consisting of different melodies performed at the same time.

The abbé Fraguier is the next in the list of defenders of ancient harmony. This learned academician was unable to persuade himself that antiquity, so enlightened, and so ingenious in the cultivation of the fine arts, could have been ignorant of the union of different parts, in their concerts of voices and instruments, which he calls *the most perfect and sublime part of music*; and thinking that he had happily discovered in a passage of Plato, an indubitable and decisive proof of the ancients having possessed the art of counterpoint, he drew up his opinion into the form of a memoir, and presented it to the Academy of Inscriptions and *Belles Lettres*, in 1716 (*h*).

The passage in question is in the seventh book of Laws, in which Plato determines that the proper time for young persons to learn music is from thirteen to sixteen years of age; during which period he supposed they might be enabled to sing in unison with the lyre, and to distinguish good music from bad; that is, such airs as were grave, decorous, and likely to inspire virtue, from those that were of a light and vicious cast. This is speaking like a legislator, says the abbé Fraguier. But

(*h*) M. Burette acquaints us that this abbé learned the harpsichord at an advanced age, and concluding that the ancients, to whom he generously gave all

good things, could not do without counterpoint, made them a present of that harmony, with which his aged ears were so pleased.

as harmonic composition was very bewitching to minds so remarkable for sensibility as the Greeks, and being, besides, of so difficult a study, as to require infinite time and labour to accomplish, he thought it necessary to caution them against too strong an attachment to it, and therefore established a kind of rule, by which they would be prevented from giving that time to musical studies, which might be better employed in more important concerns.

This is but the introduction to the passage in question, which is the following: "As to the difference and variety in the accompaniment of the lyre, in which the strings produce one air, while the melody composed by the poet produces another, (the poet then set his own verses,) from whence results the assemblage of dense and rare, of quick and slow, acute and grave, as well as of *concord* and *discord* (i); besides, the knowing how to adjust the rhythm, or measure, to all the sounds of the lyre: these are not studies fit for youth, to whom three years only are allowed for learning merely what may be of future use to them. Such contrarieties of different difficulties in the study and practice of music, are too embarrassing, and may render young minds less fit for sciences, which they ought to learn with facility."

It does not seem necessary here to enter into a verbal criticism of this passage, as it has been understood and translated by the abbé Fraguier; nor to insert two other passages, one from Cicero, and one from Macrobius, which this author has given by way of corollaries, in support of his explanation of the passage in Plato; as I shall consign him and his fancied proofs in favour of ancient counterpoint, to his brother academician M. Burette, the most able writer, in many particulars, of all those who have interested themselves in the dispute concerning ancient music.

(i) Though the abbé Fraguier translates *ἀντισφώνον*, *dissonance*, it is not the true acceptance of the word, nor can it be

found thus explained in any lexicon, or Greek writer on music; its precise and technical meaning will be given farther on.

The last champion, though by no means the least formidable, for ancient harmony, was the late Mr. Stillingfleet, in his admirable Commentary upon a musical Treatise by Tartini (*k*). If strong prejudices in favour of the ancients appear in this work, they are natural to a man of learning and taste, who has long drank of the pure fountain of knowledge at the source; and Boileau has truly said, that those who have been the most captivated in reading the best writings of antiquity, have been men of the first order, and of the most exalted genius (*l*).

Though I am not so happy as to agree entirely with Mr. Stillingfleet in all his musical opinions, yet it is a justice due to his merit as a writer, to confess, that I am acquainted with no book in our language, upon the same subject, which a scholar, a gentleman, or a musician, can read with so much pleasure and profit as the *Principles and Power of Harmony*.

As Mr. Stillingfleet was able to have recourse to original information to form his judgment, whether right or wrong, his opinions are respectable.

Tartini, in his *Trattato di Musica*, p. 143 (*m*), advances the following proposition: "That, if simultaneous harmony was known to the Greeks, they could not, and ought not to use it, in order to arrive at the end proposed; but ought to employ a single voice in their songs." This proposition he supports with arguments drawn from strong reason, and deep reflection. Tartini modestly declared himself to be no scholar; however, he had perfectly informed himself of the famous dispute, whether the ancients knew and practised harmony, in our sense of the word. He seems to have been gifted with native discernment and penetration in all his musical enquiries, which

(*k*) *Principles and Power of Harmony*.

(*l*) *Des esprits du premier ordre, des hommes de la plus haute elevation*. Let-

tre à M. Perrault.

(*m*) In Mr. Stillingfleet's Commentary, p. 70.

usually conducted him to truth, though not always by the beaten or shortest road.

Mr. Stillingfleet allows him to doubt of the ancients having known counterpoint, in peace, during the examination of his book; but in the appendix to *Principles and Power of Harmony*, p. 181, he takes the matter up seriously.

“ Dr. Wallis, says he, tells us, that the ancients had not *consorts* of two, three, four, or more parts or voices. Meibomius asserts much the same thing; and this is, one may almost say, the universal opinion. Some, however, of the writers on music, have produced passages out of the ancients, which seem to imply the contrary; but which are not looked on as conclusive by others: such as that out of Seneca, Epistle lxxxiv. “ *Non vides quam multorum vocibus,*” &c. where perhaps nothing but octaves are implied. Another passage cited by Isaac Vossius, *De Poemat. Cant.* &c. out of the piece *De Mundo*, attributed to Aristotle, seems to be more to the purpose, *μεσικη οξεις*, &c. i. e. music, mixing together acute and grave, long and short sounds, form one harmony out of different voices. Wallis also has produced a passage out of Ptolemy, which he thinks may infer music in parts. *Ptol. Harm.* p. 317. But the strongest which I have met with, in relation to this long disputed point, is in Plato; a passage which I have never seen quoted, and which I shall translate.”

It appears from this declaration, that Mr. Stillingfleet knew not that the *Memoire* of the abbé Fraguier, just mentioned, was written merely to explain this passage of Plato, and to confute that in which Dr. Wallis denies counterpoint to the ancients. I shall, however, give Mr. Stillingfleet's translation of the passage in Plato, in order to let my readers see how he understood it, before I enter upon M. Burette's examination of the same passage.

“ Young men should be taught to sing to the lyre, on account of the clearness and precision of the sounds, so that

“ they may learn to render tone for tone. But to make use
 “ of different simultaneous notes, and all the variety belong-
 “ ing to the lyre, this founding one kind of melody, and the
 “ poet another—to mix a few notes with many, swift with
 “ slow, grave with acute, consonant with *dissonant*, &c. must
 “ not be thought of; as the time allotted for this part of edu-
 “ cation is too short for such a work.” Plato, 895.

“ I am sensible, says Mr. Stillingfleet, that objections may be made to some parts of this translation, as of the words *ποικυλῆς*, *μανῆς*, and *ἀνιφωνοῖς*; but I have not designedly disguised what I took to be the true sense of them, after due consideration. It appears then, upon the whole, that the ancients were acquainted with music in parts, but did not generally make use of it.”

Having now ranged in chronological order the principal writers who have stood forth in defence of ancient harmony, and fairly stated the reasons which they have severally urged in support of their opinions, I shall next proceed in the same manner to relate all the different proofs alleged by those who have traversed the cause of the ancients.

Glareanus and Salinas are so unanimous in thinking counterpoint a modern invention, that they make use of precisely the same words in denying it to the ancients (*n*). The *Dodecachordon* of Glareanus was published in 1547; and the *Treatise of Music* by Salinas, in 1577. Their opinion was, that the great musicians of antiquity, when they accompanied themselves on the lyre, played only in unison with the voice, and that nothing can be found in the books that are come down to us, which can be urged in proof that *music in parts* was known to the ancients.

(*n*) Scio autem dubitari vehementer etiam-
 num hac ætate inter eximie doctos viros, fu-
 eritne apud veteres hujusmodi, quam nunc tra-
 dituri sumus, *musicæ*, (Salinas adds *cantus*
plurium vocum), cum apud nullum quod
 equidem sciam, authorem veterem quicquam

hujus cantus inveniatur. Multo minus etiam
videtur quibusdam quatuor pluriumve vocum
concentus olim in usu fuisse. Dodecachord.
lib. iii. p. 195. Salinas de Musica, lib. v.
p. 284.

The opinion of Glareanus upon this matter would not have much weight with me, had it not been confirmed by that of Salinas, a much better judge of the subject; for though Glareanus, says Meibomius, was, in other respects, a very learned man, yet, in ancient music, he was an infant (o).

The cavalier Hercules Bottrigari of Bologna, was possessed of much musical learning. He was author of several treatises upon music, that were printed about the latter end of the sixteenth century, and left several others behind him in manuscript, which are now in the possession of Padre Martini, particularly one upon the *Theory of Fundamental Harmony*, in which there is the following passage, which puts his opinion concerning ancient harmony out of all doubt.

“As neither ancient musicians, nor ecclesiastics, had characters of different value to express time, or make sounds very long or very short, they had consequently no other measure of time in singing, as far as I have been able to discover, among the Hebrews, Greeks, or first ecclesiastics, than that of an articulately quick, or slow pronunciation; nor were they acquainted with that diversity of different parts in consonance, which in modern music constitutes as many different airs as there are parts set to the principal melody (p).”

Artusi, another musical writer of the sixteenth century, whose opinions were much respected by his contemporaries, expresses himself very clearly on the subject in question. “In the first ages of the world, during the infancy of music,

(o) Glareanus, homo ut cætera doctissimus, sic in antiqua musica infans. In Aristox. p. 103.

(p) Non avendo avuto i musici antichi, anco ecclesiastici la differenza del diverso valore delle varie note, la importantia della misurata grande, o picciola quantità del tempo quelle; imperocchè altra misura di tempo

non ho fin qui trovato, che avessero in cantando, nè gli Ebrei, i Greci, i primi ecclesiastici, che quella della tarda, o veloce buona lor pronuncia: ne la diversità delle tante arie in uno istanti medemo, che tante sono, quante sono le parti, di che la cantilena è composta. Il Trimerone de' Fondam. Arm.

“there

“there was no such thing as singing in parts, as counterpoint
“is a modern invention (q).”

The next in the list of writers of eminence, who denies harmony, in our sense of the word, to the ancients, is Cerone, author of an excellent treatise upon music in Spanish, which is become extremely scarce. This writer says “it is necessary to observe, that the music of the ancients was not diversified with so many instruments; nor were their concerts composed of so many different parts, or such a variety of voices as the present (r).”

The famous Kepler was so far from allowing to the ancients such harmony as is practised by the moderns, that he says, though Plato in his Republic speaks as if something like it were in use, he supposes if they ever had any accompaniment to their melodies by way of base, it must have been such a one as is produced by the drone of a bagpipe (s). This is, perhaps, being as unjust to the ancients, as those are to the moderns, who will not allow them to have made any progress in music, because they are unable by their compositions and performance, to cure diseases, tame wild beasts, or build towns.

Father Merfennus says, “as to the Greeks, and people still more ancient, we know not whether they sung in different parts, or accompanied a single voice with more than one part. They might, indeed, vary the sounds of the lyre, or strike several strings together, as at present; but there is no treatise on

(q) *Ne' primi secoli, nel nascere di questa scienza, non cantavano in consonanza, essendo che il cantare in consonanza, è un moderno ritrovato. P. D. Gio. Maria Artusi. Arte del Contrapunto, delle Conson. imperf. et Disson. p. 29. Venet. 1598.*

playing

playing that instrument come down to us : however, as the ancient books on other parts of music which are preserved, are silent with respect to counterpoint, it is natural to suppose that antiquity was ignorant of the art (t)."

Marfilus Ficinus, who in the fifteenth century wrote a commentary upon the *Timæus* of Plato, asserts, that the Platonians could not have understood music so well as the moderns, as they were insensible to the pleasure arising from thirds, and their replicates, which they regarded as *discords*; notwithstanding the seventeenth, tenth, and third major, are the most grateful of our concords, and so necessary, that without them our music would be destitute of its greatest ornament, and counterpoint become monotonous and insipid.

Kircher says, though the ancients may have used some of the concords in counterpoint, yet there were others, such as the thirds and sixths, which are so grateful in our compositions, that were utterly prohibited; and as to the use of discords, by which such fine effects are produced in modern music, it was an art of which they had not the least conception (u).

Claude Perrault, the famous architect, and member of the Royal Academy of Sciences at Paris, published a *Dissertation upon the Music of the Ancients*, in 1680, which is chiefly employed in proving that counterpoint was unknown to antiquity; he has manifested himself to have been perfectly mas-

(t) Quant aux Grecs, et aux plus anciens, nous ne savons pas s'ils chantoient, à plusieurs voix, et bien qu'ils ne joignissent qu'une voix à leurs instrumens, ils pouvoient néanmoins faire trois ou plusieurs parties sur la lyre, comme l'on fait encore aujourd'hui, et une autre avec la voix. Joint que les livres que les Grecs nous ont laissés de leur musique, ne témoignent pas qu'ils aient si bien connu et pratiqué la musique, particulièrement celle qui est à plusieurs parties, come l'on fait maintenant, et conséquemment il n'est pas raisonnable de les prendre pour nos juges en cette matière.

Harmonie Universelle, lib. iv. p. 204. Paris. 1636.

(u) *Musurgia*, lib. vii. tom. i. p. 547.

The learned and laborious Meibomius, p. 35, who was most willing to bestow upon the ancients whatever would redound to their honour, at the expence of the moderns, gives no proofs of their knowledge of counterpoint. Two passages which he quotes from Bryennius and Psellus, writers of the middle ages, shew, that even in their time, thirds and sixths made no part of their *Antiphonia*, or *Paraphonia*.

ter of the subject; he has read all the ancient authors who have written expressly upon it; he has examined the passages which have been thought the most favourable to it, in some authors who have only mentioned it occasionally; and has considered the marvellous effects attributed to it in others; he reasons forcibly, and the facts he alleges in support of the side he has taken, are strong, and well stated. This work was neither the cause, nor consequence of the quarrel between Boileau, and his brother, Charles Perrault, which did not break out till seven years after the publication of the *Essays in Natural Philosophy*, in the second volume of which the *Dissertation upon the Music of the Ancients* first appeared. Our author had indeed given his opinion upon the subject very freely in the notes to his excellent translation of Vitruvius in 1673; where, in his commentary of the chapter upon *Harmonic Music, according to the Doctrine of Aristoxenus*, he declares that “there is nothing in Aristoxenus, who was the first that wrote upon concords and discords, nor in any of the Greek authors who wrote after him, that manifests the ancients to have had the least idea of the use of concords in music of many parts (x).”

Satire is an excellent weapon when employed against vice and folly; but it becomes a basilisk in the hands of a man of strong passions and little feeling, who only employs it to blast the reputation, and wither the laurels of those who differ from him in opinion, or whom mere caprice shall incline him to dislike; it is then a deadly instrument, an edged tool in the hands of a mischievous child, or a madman. I have never been able to discover, after a minute enquiry and perusal of the literary history and quarrels of the learned in France, during the reign of Lewis the fourteenth, any other cause for the hatred and detestation which Boileau long manifested for Charles Perrault, but that he was a friend to the poet Quinault, whom posterity has however allowed to be a modest and inoffensive man, of

(x) *Les dix Liv. d'Architecture de Vitruve*, liv. V. p. 161, 2d Edit. 1684.

true genius; yet Boileau not only hated him, and his manner of writing, but furiously attacked all who were connected with him. In his *Art of Poetry*, his *Satires*, and in a great number of *Epigrams*, he calls the most learned physician of his age and country, "an ignorant quack, an assassin, an enemy to health and good sense;" and of the best architect France has ever produced, he says, that "through pity to human kind, or rather want of practice, he quitted physic for the trowel, and in a few years raised as many bad buildings, as he had before ruined good constitutions."

This shews how dangerous it is to depend upon poetical information concerning the vice or virtue, the genius or dulness, of individuals. It does not appear that either Quinault, or Perrault, ever tried to retaliate Boileau's abuse; but luckily posterity has done them justice; and M. de Voltaire, among others, has rescued their characters from the infamy with which the surly satirist had loaded them. "Quinault, he says, is no less admired for his beautiful lyric poetry, than for the patience with which he suffered the unjust severity of Boileau. During his life it was believed that he owed his reputation to Lulli; but his poetry will always be read, though the music of Lulli is already insupportable. Time sets a just value on all things."

And Claude Perrault he allows to have been not only a most accurate naturalist, profoundly skilled in mechanics, and an admirable architect, but that he was possessed of great abilities in all the arts, which he acquired without a master; and finishes his character by saying, that he encouraged the talents of others under the protection of the great statesman Colbert, and enjoyed a high reputation, in spite of Boileau (y).

But to return to *counterpoint*.—There is a famous passage in the *Treatise on the Sublime of Longinus*, cap. xxiv. which has been made use of in favour of ancient harmony. The

(y) *Siecle de Louis XIV.*

subject of the chapter is the *Periphrasis*. "I believe, says Longinus, no one will dispute the utility of the periphrasis in the sublime; for as the principal subject in music becomes more agreeable to the ear when it is broken into divisions, or embellished with other notes, suitable to it, or which correspond with it: so the periphrasis, turning round the proper word, frequently forms with it a kind of consonance and harmony, which is very beautiful in discourse."

Boileau has translated *φθόγοι παρὰφωνοι*, *different parts*, from his belief that the ancients had *counterpoint*: "For I am not of the opinion of those moderns, says he, who will not allow *different parts* to that music, of which such wonders are related, since, without *parts*, there could be no *harmony*." But he did not know, that by *harmony* the ancients always understood what we mean by *melody*, as may be proved from ancient musical treatises, as well as from a passage in Longinus himself, cap. xxxiii. where *harmony* applied to the human voice in the singular number, must mean melody; a mistake that persons not versed in music, are apt to make. Mr. Addison talks of an *harmonious voice*.

However, Boileau, in this instance, only declared his religious principles and veneration for antiquity, in opposition to the sentiments of his antagonist, Perrault; and in this he has been rather more humble and modest than usual; for he concludes his note on the passage, by saying, "I submit this matter, however, to the learned in music, for I have not sufficient knowledge in the art, to determine the point."

Upon the whole, it must be allowed, that a periphrasis, which implies many words to express the same thing, gives a truer idea of melody than harmony, according to the modern acceptation of those words, and a passage *varied*, or a single note broken into divisions, has a great similitude to *circumlocution*.

Angelini Bontempi, the next opponent of ancient counterpoint, is truly a formidable one. He was not only an excellent practical musician, but a profound theorist, and a scholar. With these qualifications he read the ancient authors upon the subject of music, in the languages they were originally written, and composed a history of music, in one small volume, folio, which is better digested, and better executed in most of its parts than any other, of the same size, that has been produced.

This author, after examining all the ancient genera, systems, and proportions, declares that it is no longer a matter of doubt and conjecture, but a certainty, of the most clear and easy demonstration, that ancient music consisted of only a single part, as the treatises which are come down to us have considered nothing more than contiguous and successive sounds, and, consequently, the use of *counterpoint* was utterly unknown to the ancients: though the moderns, without reading or understanding the doctrines of the ancient fathers of this science, have imagined, and have persuaded others to imagine, that they were in possession of it (z).

The learned doctor Wallis has given great offence to the defenders of antiquity, by the contempt which he has thrown upon ancient music, both in his appendix to the *Harmonics of Ptolemy*, and in the *Philosophical Transactions*. His opinions are indeed the more to be feared by them, as it could never be said that they were founded upon ignorance; for they were obliged to allow that he knew more of ancient music than any modern, except Meibomius, who, likewise, with all his know-

(z) Da questi pochi affiomi o dimostrazione d'Aristosseno si scopre, non per dubbiosa conghiettura: ma per chiara e manifesta evidenza, che la musica antica, siccome quella, che non ha considerato se non i suoni contigui e susseguenti, altro non sia stata, che musica appartenente ad una sola voce; e che l'uso del contrapunto, non sia giammai pervenuto

alla notizia degli antichi; siccome i moderni, senza baverne o letto o inteso la dottrina degli antichi Padri di questa scienza, si sono persuasi; et hanno co' loro scritti procurato di persuaderne anco gli altri. *Historia Musica* di Gio. And. Angelini Bontempi. Perugia, 1695, p. 168.

ledge of the subject, and admiration of the ancients, could discover nothing in their musical treatises, upon which to found their claim to the knowledge of *counterpoint*.

Doctor Wallis, who had no prejudices against music in general, or that of the Greeks in particular, said, that as far as he was able to discover, the union of two, three, four, or more parts, as they are called, or sounds in consonance, which is admired in modern music, was unknown to the ancients (a); or, as he has translated the passage himself in the *Philosophical Transactions*, No. ccxliii. p. 298, for August 1698: "I do not find amongst the ancients any footsteps of what we call *several parts* or *voices*, (as *base, treble, mean, &c.* sung in *confort*) answering each other, to complete the music."

Doctor Wallis has indeed produced one passage out of Ptolemy, which he thinks may infer music in parts. The abbé Fraguier, Chateauneuf, and Mr. Stillingfleet, have all eagerly availed themselves of this concession; but M. Burette has cruelly deprived them and their adherents of that comfort, by a critical examination of their manner of translating the passage, in which he seems clearly to have proved that they have either wilfully or inadvertently mistaken the true acceptation of the most important terms in the Greek text; and that the utmost which can be inferred from the passage in question is, that the ancients both played and sung together frequently in *unisons* and *octaves*.

In 1723, M. Burette published, in the fourth volume of the *Memoires des Inscriptions*, a Dissertation upon the *Symphony* of the Ancients, which has never yet been answered. The abbé Fraguier, indeed, indirectly endeavoured to invalidate the proofs he cited from ancient writers against counterpoint, by others which seemed to bear a different construction; but though the

(a) *Ea vero, quæ in hodierna musica conspicitur, partium (ut loquuntur) seu vocum duarum, trium, quatuor, pluriumve inter se consensio, (concinentibus inter se, qui simul*

audiuntur, sonis) veteribus erat (quantum ego video) ignota. Appendice ad Ptolem. Harm. p. 316 & 317, in 4to. 1682. fol. p. 175, Edit. 1699.

abbé was a man of taste and classical learning, he wanted musical erudition sufficient to know the technical use of the Greek words, which he thought favourable to his argument, in writers who had only mentioned music incidentally; whereas M. Burette, who had drawn his knowledge from the source, by studying such treatises of ancient Greek musicians as had been written expressly on the subject, soon proved the evidence of his antagonist to be feeble, and his reasoning fallacious.

M. Burette, after so complete a victory, was allowed to enjoy his laurels in peace for a considerable time, till, at length, the two Jesuits, Bougeant and Cerceau, commenced hostilities; not for his having treated the ancients with too much rigour, but with too little: *Le sceptique Bayle*, says M. de Voltaire, *n'est pas assez sceptique*. M. Burette, in the opinion of these fathers, had granted too much to the ancients, in allowing them to have sung and played in concert *by thirds*.

In order to give my readers an idea of this dispute, I shall epitomize, and make some remarks upon M. Burette's Dissertation. But first it seems necessary to explain a few important terms, which frequently occur in ancient authors concerning music; and the safest way of doing this will be to have recourse to the Greek musical writers themselves.

Such sounds as were tuneable, and fit for music, were called in all their treatises *ἁρμονίαι*, *concinuous*; and of these some were *concords*, and some *discords*. The *concords*, according to the testimony of every writer on ancient music, from Aristoxenus, to Boethius and Bryennius, the two last, of any authority, were the *fourth*, *fifth*, *eighth*, and their replicates, or octaves. The *discords* were such intervals as are less than a fourth; and all such as are found between the other consonant intervals; consequently, the *third* and *sixth*, as well as the *second* and *seventh*, must have been numbered among the *discords*. Gaudentius, p. 11, tells us that

ὁμοφωνοί,

“Ὅμοφωνοι, *homophonoi*, *unisons*, differ neither in gravity nor acuteness, but are duplicates of the same sound.”

“Συμφωνοι, *symphonoi*, *concord*s, are such sounds, as when struck at the same time on the lyre, or by flutes, so mix and unite together, that the tone of the lower sound is not to be distinguished from the upper.”

“Διαφωνοι, *diaphonoi*, *discord*s, are such sounds as, when struck together, never unite (b).”

“Παραφωνοι, *paraphonoi*, are neither *concord*s nor *discord*s, but between both; yet, when used together, they seem *symphonoi*, or *concord*s, as is the case between *Parypate Meson*, and *Paramese*, or F B; and likewise between *Meson Diatonos* and *Paramese*, or G B.” Now we have no sounds that come under this predicament of being neither *concord*s nor *discord*s, but between both, unless it is such *concord*s as are *out of tune*. However the passage seems to imply that about this time the *tritonus* and the *ditone* began to be used in *counterpoint*.

M. de Chabanon, *Memoires des Belles Lettres*, tome XXXV, gives it as his own *conjecture*, that the use of the *Paraphonoi*, mentioned by Gaudentius, was the beginning of *counterpoint*; yet it is but justice to say that M. Marpurg had conjectured the same thing in his *History of Music*, six years before the *Memoire* of M. de Chabanon was read. However, another conjecture of this learned academician seems ingenious and new, which is, that in proportion as the enharmonic grew into disuse, attempts at *counterpoint* became more frequent; for there could be no fundamental base, or harmony, given to enharmonic melodies: hence, while that *genus* continued to be so much admired and practised, as Plato, Aristoxenus, and other ancient writers, who mention it, inform us, all attempts at harmony must have been precluded.

(b) These were only admitted in melody, or a single part; hence Plutarch

(*de ei Delphico*) calls them μελωδούμενα and μελωδήτα.

It has long been a matter of wonder, that sounds so agreeable to our ears, and so common in our harmony, as thirds and sixths, should by the Greeks be numbered among *discords*, and be banished from *symphony*, as their name ἀσυμφωνία, or διαφωνία, *unfit for symphony, discords*, implies; but the Greek proportions and divisions of the scale, however practicable in melody, are certainly inadmissible in harmony.

Sir Isaac Newton, taking it, I suppose, for granted that the ancients *had* harmony like ours, says, “It is very strange that those whose nice scrutinies carried them so far as to produce the *small limmas*, should not have been more careful in examining the greater intervals (c).”

The triple progression, to which the Pythagoreans religiously adhered, and by which fourths and fifths were made perfect and unalterable, *soni immobiles*, could furnish no thirds and sixths, but what were intolerable; as their tetrachords were

B E A D G C F | Bb

built upon these numbers 1 3 9 27 81 243 729 | 2187.

And the divisions of Aristoxenus, who pretended to make the ear the sovereign judge of sounds, and yet gives to the octave six *equal* tones, twelve semitones, and twenty-four dieses, or quarter-tones, must, to our conceptions, have rendered the scale unfit not only for *harmony*, such as ours, but *melody*. Aristoxenus, however, was a trimmer, and availed himself, in some particulars, of the doctrines of Pythagoras, at the very time he publicly condemned them. The abbé Rouffier calls him *le chef des temperateurs*; and it would not be difficult to prove that a *temperament* was known to the ancients, even earlier than the time of Aristoxenus; but as such a discussion does not seem properly to belong to this section, I shall reserve it for a future chapter, in which not only a short history of temperament will be given, but of *harmonics*, or the philosophy of sounds, as far as it appears to have been known

(c) *Nugæ Antiquæ*, p. 209.

to the ancients. At present I shall only observe, that though the *perfect harmony* of fourths and fifths was certainly corrupted by a temperament, which rendered the *perfect* concords *false*, in order to make the *imperfect* more *pleasing*; yet it seems as if we were entirely indebted to *temperament* for *counterpoint*, or music in parts; as, without a temperament, either occasional or fixed, thirds and sixths would always have remained intolerable.

M. Burette by the word *symphony*, which is the subject of his Dissertation, means the union of many harmonious sounds in *concert*; and this is at present the general acceptance of the word, when applied to modern overtures.

The Greeks gave the appellation of *harmony*, figuratively, to every thing that had proportion. The term, however, must be very cautiously used in treating of ancient music, as no decisive instance can be found in Greek authors, musicians by profession, where any thing more is meant by it than the arrangement of *single sounds*, agreeable to some genus, mode, and rhythm; never the *union* or simultaneous use of them.

Ἀρμονία, *harmony*, is defined by Hesychius and Suidas ἡ εὐτακτος ἀκολουθία, *a well-ordered succession*; which clearly makes it *melody*. And the general title of the Greek musical treatises, in which nothing is mentioned but mere melody, fully confirms this definition.

Aristoxenus calls his work *Ἀρμονικὰ Στοιχεῖα*, *Elements of Harmony*; that of Euclid and Gaudentius is called Εἰσαγωγὴ ἀρμονικῇ, *an Introduction to Harmony*; the tract of Nichomachus is styled *Ἀρμονικῆς Εἰςχειρίδιον*, *An Harmonic Manual*; and that of Ptolemy *Ἀρμονικὰ*, *Harmonics*.

Lucian (*d*), in speaking of the modes, which were only different kinds of melody, employs this word in the same sense. And Plato's definition of harmony (*e*) is a farther con-

(*d*) In *Harmonide*. tome i. p. 585. Ed. Græv.

(*e*) *De Legib.* lib. ii. p. 664. Ed. Steph. In order to avoid, as much as pos-

sible, loading the page with Greek, I shall frequently give nothing more than references to the edition, and page of the authors in question.

firmation

firmation of its being constantly used for melody. "We call *cadence*, says that philosopher, the order or succession of movement; and *harmony*, the order or succession of sounds, as to acute and grave, differently arranged and intermixed." And finally, Aristotle (*de Mundo*) uses it in a sense which still fortifies this idea.

M. Burette therefore concludes, that the Greeks, in their chorusses and concerts, sung and played either *in unison*, which was called *Homophony*; or in *octaves*, which was called *Antiphony*. The acceptation of *Homophony* has never been disputed; but it may be necessary to give authorities for that of the word *Antiphony*, a term frequently used in sacred music during the first ages of the church.

Aristotle, Prob. XXXIX, Sect. 19. says *Antiphony is consonance in the octave*: το μεν ἀντιφωνον συμφωνον ἐστὶ διαπασων: and adds, that it "results from the mixture of the voices of boys and men (*f*).^(f)" The same philosopher, Prob. XVI, after asking why *Antiphony* is more agreeable than *Homophony*, gives this reason: that in *Antiphony* the voices are distinctly heard; whereas in unison they are often so confounded that one absorbs the other.

The ancients sung in concert not only in the octave, but the double octave, or fifteenth. This appears from another problem in Aristotle, XXXIV, where he asks why the double fifth, and double fourth, cannot be used in concert as well as the double octave? It likewise appears from the same author that the union of two voices in octaves was called *Magadizing*, from a treble instrument of the name of *Magadis*, *Mayadis*, strung with *double* strings tuned octaves to each other, like the octave stop in our harpsichords.

(f) In the ancient Greek music the literal meaning of *Antiphonia*, or *Antiphony*, is sound opposed to sound; as a note and its octave, its fourth, or its fifth: in the music of the Romish church it means op-

position of voices, *response*, as when the congregation answers the priest; or in chanting, when each side of the choir sings verse for verse, alternately.

Thus far M. Burette has advanced nothing but what is reasonable and indisputable ; but, when he adds, that besides these two ways of fingering and playing together in unisons and octaves, there is room to conjecture that the ancients had still another method, which consisted of fingering and playing *by thirds*, here the Jesuits, Bougeant and Cerceau, commence their attack ; and here I shall leave him, as I shall every author, however respectable, when his reasoning does not fully satisfy my mind ; that is, when it rather raises than removes difficulties.

It is well known that there is nothing so agreeable in modern harmony as the alternate succession of sharp and flat thirds ; but it is likewise as well known that a whole movement in two parts, composed entirely of nothing else but of flat or of sharp thirds, from the beginning to the end, would be intolerable.

Let any one make the experiment with the two stops of an organ called the fifteenth and tierce, and he will find the effect detestable. No organist ever attempts to play on them together, without other stops ; and in the full chorus they are so qualified by the great number of lower and more powerful sounds produced by pipes that are longer, and of a larger diameter, that they cannot be distinguished without great attention.

Full organ, when only
G is put down.

With these stops out, every single note upon the instrument is furnished with its full harmony ; but if the small harmonic pipes were not governed by the greater, what a *cacophony* would a complete chord occasion !

Common
chord
major.

The chord
minor
would be
worse.

Add any one discord to these,
and the chord seems to include
every insult that can be put
upon the ear.

M. Perrault supposed that a passage in Horace could only be explained by admitting that the ancients sometimes sung and played *by thirds*, that is, in two different modes, which were distant a third from each other.

Sonante mistum tibiis carmen lyrâ

Hac Dorian, illis Barbarum.

Epod ix. v. 5.

M. Burette adopted this idea in the year 1717. In 1726 he seemed to give it up to the reasoning of father Bougeant; but in 1729 he resumed it again with more firmness than ever, upon being treated with some severity by father Cerceau, for having adopted M. Perrault's explication of the passage in Horace.

It was urged against him, that the ancients always regarded thirds as discords; but this was thought a trivial difficulty. And M. Burette had reconciled it to his mind, he surely could not to his ear, that it was a common thing among them to sing and play in two different modes, or keys, at once. He settles it therefore, that Horace by the *Barbarian mode* meant the Lydian, which is a sharp third above the Dorian.

J. Baptisti Doni, in speaking of our imitating the ancients in musical dramas, proposes as a pleasing variety, the accompanying some airs in the course of the piece entirely *by thirds*;

but whether two parts always sing in sharp thirds, or flat thirds, the effect will be equally disagreeable. Suppose, for instance, the melody was the following, and the upper part was the accompaniment :

These parts would be moving in two keys very different from each other ; the relations would be mostly false, and there would be no precise idea of either of these keys impressed on the ear, in preference to the other ; and yet M. Burette supposes that Horace, in speaking of the pleasures of the table, introduces a concert composed of a lyre, played in the Dorian mode, and accompanied by flutes in the Lydian ; that is to say in the key of D $\sharp$, and E $\sharp$ with a minor third ; as the general idea about the modes, before Ptolemy's time, was, that they were a semitone higher than each other.

But let them be placed how they will, either a fourth distant from each other, or thus ; d c $\sharp$ B A G $\sharp$ F $\sharp$ E, no two of them can be used at the same time in thirds, without changing the intervals of one, which would be changing the *mode* or key.

Indeed a melody might be accompanied by thirds *in two different species of octave* ; but that would be still in *one mode* ; and the matter in debate is how two persons could sing and play in *two different modes at the same time*.

In the fifteen modes, as understood by Bontempi and others, the Hyperphrygian, or Hypermixolydian mode, and the Hypodorian are only octaves to each other ; and in the explanation which Sir Francis Eyles Stiles gives of the fifteen modes, there is not only a repetition in these two, but in the Hyperlydian and Hypophrygian, which are likewise octaves to each other ;

other; and it seems to explain the *Magadizing*, or playing in two modes at once, more naturally and probably, by supposing it was done in the modes that were octaves, than in any two that were thirds, fourths, or fifths to each other.

This will likewise explain a passage in Athenæus, lib. xiv. cap. 5, concerning what Pindar says in writing to Hiero, that “when a boy sings an air with a man, it is called *Magadizing*, because they sing the same melody in *two different modes*.” Now boys and women naturally sing an octave higher than a man, at the same time that they think they are singing in unison.

Father Cerceau has pressed M. Burette very hard in this dispute, and driven him to a sophistical defence. However, M. Burette would persuade us that he has totally overthrown his adversary, in the instances he gives of thirds, sixths, and tenths, used *per saltum*, to the same syllable, in ancient melody; but because *one third*, or *sixth*, may be pleasing in melody, does it follow that a succession of nothing else but thirds of the same kind would have a good effect in harmony? If the ancients called thirds and sixths discords, on account of their being out of tune, from the too great perfection of fourths and fifths, which were never tempered, it but renders the fact insisted on by M. Burette, of a succession of thirds flat or sharp, the more improbable.

It is so humiliating a circumstance for a disputant to confess himself vanquished, where sagacity is the stake, that it is hardly ever done, publicly, with a good grace. M. Burette, a man of learning and candour, when he was not hard pushed himself, could never have defended so improbable and disagreeable a practice, as the succession of flat or sharp thirds throughout an entire piece, in the ancient music, for any other reason but that of having *once said it*, after Claude Perrault, perhaps without sufficiently reflecting upon the numerous objections to which such an assertion was liable. But I am as certain as it is possible to be, of
what

what cannot be proved, that though he may have thought with Perrault at first, yet, after he had read the arguments urged against such a practice by the fathers Bougeant and Cerceau, he reasoned against conviction; and in supporting his first proposition, reputation, not truth, was the object of his defence.

But to return to M. Burette's Dissertation. He examines the structure of the ancient lyre, and the number of its strings, and shews how far it was capable of the harmony of double stops. After which he enquires whether the ancients availed themselves of all its powers in this particular; and concludes that he can find no appearance that they did.

However, in speaking of the lyre in its improved state, when it was furnished with a great number of strings, M. Burette, after refusing counterpoint to the ancients, allows that the lyrists struck sometimes a chord composed of the key note, fifth and eighth, which was a fourth to the fifth; but though he supposes the ancients could bear a *whole movement of sharp thirds*, he will not suppose that a *single third* was ever used in those chords to complete the harmony. Upon other instruments he allows for accompaniment a kind of drone composed of key note and fifth, like that of a vielle, or bagpipe; but this is all conjecture; and if we must have recourse to that, why not generously grant the ancients counterpoint at once, upon a supposition that so ingenious and refined a people as the Greeks could not help discovering it, with the great time and pains they bestowed in the cultivation of music?

But not content with annihilating the *harmony* of the ancients, M. Burette adopts a remark of Perrault in his Vitruvius, which bears hard upon their *melody*. By comparing the ancient Greek tetrachord with our fourth, it appeared to these writers that we had the advantage in the number of sounds; but the specimen of Euclid's mixed genus, that has been given, p. 31, proves them to have been mistaken.

According

According to Aristotle, Prob. XIX. Sect. 17. *neither the fifth nor fourth, though concords, were sung together in concert (g)*. In Plutarch (h), however, who wrote many ages after Aristotle, when it may be imagined that *symphony* had made some advances towards our harmony, it appears as if both the fourth and fifth were frequently sounded together; whence they were called *συμφωνα*, *concords*; but whoever is versed in modern counterpoint must know that a succession of these concords is insufferable, and that a composition, in which no other concords than the fourth, fifth, and eighth, had admission, would be so dry and insipid, that it would scarce merit the name of harmony.

On the other side, if, in spite of such formal and positive proofs to the contrary, we were, for argument sake, to allow that the ancients made use of their four discords in concert, as well as of the three concords, we must at the same time grant them the art of combining different chords; of preparing and resolving discords, according to the rules, founded upon the nature of chords, and upon the effect which they produce upon the ear. Now we ought to conclude that a body of all these rules would form an essential part of the theory of music, with respect to *symphony*, as other parts have done with respect to melody, or a simple treble. However, in the most ample and complete treatises upon ancient music which are come down to us, not one rule with respect to composition in parts is to be found. The authors of these treatises, after promising at the beginning, that they would speak of every thing that concerned music, separate the heads of their work, which they all divide into seven articles: *sounds, intervals, systems, genera, tones, or keys, mutations*, and melody, or *melopoeia*; which with *rhythm*, or time, constituted the whole art and extent of their practical music. For there is not the least probability,

(g) Δια πιντε και δια τισσαρων οὐκ ἄδουσιν
ἁντιφωνοι.

(h) De i. Delphico, p. 693. Edit.
Steph. Gr.

that

that they would have omitted in their didactic writings so considerable a part of it as *counterpoint*, if it had come to their knowledge.

That diligent enquirer, father Martini of Bologna, whose learning and materials have afforded me great assistance in my musical researches, ranks himself among the opponents of ancient *counterpoint*. The opinion of this respectable judge must have great weight with all those who consider that he has spent the chief part of a long and laborious life in the study of music, and musical literature; that all the repositories, all the archives of Italy, where the most precious reliques of antiquity are treasured up, have been opened to him; that his knowledge and materials are equally uncommon; and that the native candour and purity of his mind are such as exempt him from all suspicion of prejudice or partiality.

This author, after shewing a strong desire to favour the ancients in their claims, is obliged to confess, with seeming reluctance, that as they allowed no other intervals to be concords than the *octave*, *fourth*, and *fifth*, with their replicates, it indubitably robs them of the merit of having invented and practised what we call *counterpoint* (i); and this decision receives additional force from the testimony of several writers of the middle ages, cited in his book, who call music in parts, the *new music*, the *new art*, the *new invention* (k).

Padre Martini, however, before he quits the subject, gives the following specimen of such meagre counterpoint as was likely to have been produced without the use of imperfect concords; in which he has been obliged to admit three sixths, a second, a seventh, and a ninth, contrary to the idea we have of what the delicate ears of the Greeks would allow.

(i) Ciò essendo, parmi questo bastevole a contrastare a' Greci il vanto, e la notizia del contrappunto, che noi abbiamo ora in possesso. Storia della Musica, tom. i. p.

174. 1757.

(k) Musica nova; ars nova; novitium inventum.

But with all the care of so learned a composer, this little specimen seems made up of every thing that he would have avoided, in a composition of so few parts, if thirds and sixths had been allowed to be used.

M. Marpurg, of Berlin, published, in 1759, the first part of a History of Music (1), the second has not yet appeared. His enquiries in this work have been chiefly confined to ancient music and musicians. He has read not only many of the authors already cited, but several others; and has considered the subject with the attention and sagacity of a musician of learning and experience. However, he is very cautious in delivering his opinions concerning ancient harmony, and thinks it safer, and perhaps more likely to conciliate parties, to grant some kind of counterpoint to the ancients, than wholly to deprive them of it; though what he gives them seems more to flow from generosity, than a conviction of their just claim.

This writer sets off with allowing that as nature does nothing by large strides, and all the arts have arrived at perfection by small degrees, the music of the most remote times must have consisted of only a *single part*; and when the *two part* system was at first adopted, discords could not have been in use. "There are no accounts to be met with,

(1) Kritische Einleitung in die Geschichte
und Lehrsätze der Alten und neuen Musik.
1 Vol. thin 4to. A Critical Introduction

to the History and Theory of Ancient and
Modern Music.

M. Marpurg is obliged to confess, by which the date can be fixed when the *two part* system was invented, and generally received." However, he conjectures, that a kind of harmony in *pure consonance*, by which I suppose he means *perfect concords*, of fourths, fifths, and eights, continued from that period, to about the time of Guido. Indeed this is not allowing the ancients to have made much progress in the art of combining sounds, as the example just given from Padre Martini will manifest.

M. Roufseau is very explicit upon this subject in his *Musical Dictionary*, at the article *Counterpoint*, which he terminates by saying, "It has long been disputed whether the ancients knew counterpoint; but it clearly appears from the remains of their music and writings, especially the rules of practice, in the third book of Aristoxenus, that *they never had the least idea of it.*"

His reflections upon this subject, in the article *Harmony*, are curious. "When we reflect, that of all the people on the globe, none are without music and melody, yet only the Europeans have harmony and chords, and find their mixture agreeable; when we reflect how many ages the world has endured, without any of the nations who have cultivated the polite arts knowing this *harmony*; that no animal, no bird, or being in nature, produces any other sound than unison, or other music than mere melody; that neither the Oriental languages, so sonorous and musical, nor the ears of the Greeks, endowed with so much delicacy and sensibility, and cultivated with so much art, ever led that enthusiastic and voluptuous people to the discovery of our *harmony*; that their music, without it, had such prodigious effects, and ours such feeble ones with it; in short, when we think, continues he, of its being reserved for a northern people, whose coarse and obtuse organs are more touched with the *force* and *noise* of voices, than with the sweetness of accents, and melody of inflexions, to make this
great

great discovery, and to build all the principles and rules of the art upon it; when, says he, we reflect upon all this, it is hard to avoid suspecting that all our harmony, of which we are so vain, is only a Gothic and barbarous invention, which we should never have thought of, if we had been more sensible to the real beauties of the art, and to music that is truly natural and affecting."

This opinion is generally ranked among the paradoxes of M. Rousseau. However the sentiments of this wonderful writer seem here to proceed more from a refined taste, enlargement of thought, and an uncommon boldness and courage in publishing notions so repugnant to established opinions, than from a love of singularity. Besides, M. Rousseau is not the only writer on music who has imagined it possible for melody to please without the assistance of harmony. Vincenzo Galilei and Merfennus went still farther, and thought that the contrary effects of grave and acute sounds in different progressions, must mutually weaken and destroy each other. Indeed Merfennus, in his *Harmonie Universelle* (m), declares, that he thinks it no reproach to the ancient Greeks, to have been ignorant of *counter-point*.

"It is difficult, says this father, to prevail upon modern composers to allow that simple melody is more agreeable than when it is accompanied by different parts, because they are in fear of diminishing the public esteem for the learning and contrivance of their own compositions; which, indeed, would be the case, if a method could be devised of finding the most beautiful melodies possible, and of executing them with the utmost perfection."

"For it seems as if the art of composing in parts, which has been practised only for these last hundred and fifty, or two hundred years, had been invented merely to supply the defects of air, and to cover the ignorance of modern musicians in this

(m) Liv. IV. de la Composition, p. 197.

part of *melopoeia*, or melody, as practised by the Greeks, who have preserved some vestiges of it in the Levant, according to the testimony of travellers, who have heard the Persians and modern Greeks sing."

"And experience daily shews, that the generality of mankind are more attentive to pure melody, than to concertos, or pieces of many different parts, which they readily quit, in order to hear a simple air sung by a good voice; because they can more easily distinguish the beauty of a single part, or voice, than of harmonic relations; without taking into the account the beauties of poetry, which are certainly more easily comprehended in a single part, than when it is accompanied by two or more parts, moving in different proportions of time."

"But granting that great pleasure in music arises from hearing and distinguishing consonance, a *duo* must be more agreeable than a *trio*, as the harmony is less confused and compounded. For, if an eighth, a fifth, a fourth, a third, or a sixth, has any thing beautiful in itself, and affects the ear with a peculiar species of delight, the sounding each of these concords with others of a different kind, must considerably weaken their force and effect."

"It is related of the famous composer, Claude le Jeun, that when he first presented his pieces of five, six, and seven parts, to the masters of Italy and Flanders, that they would not look at them; and his compositions would never have been performed by them, if he had not written something in two parts; in which, however, he, at first, succeeded so ill, that he confessed himself to have been ignorant of the true principles of music."

P. Merfennus adds, that "the beauties of a *trio* cannot be so easily discovered and comprehended as of a *duo*; as the mind and the ear have too many things to attend to at the same time. And this father carries his predilection for simplicity so far as to say, that when lovers of music are more delighted with *trios* than *duos*, it must proceed from their being more fond of
crowds.

crowds and confusion, than of *unity* and *clearness*; and compares them to those who love to fish in troubled waters, or who like fighting pell-mell with the multitude, better than in duel, where a want of courage and conduct is more easily discovered."

At the time when Merfennus lived, the rage for music in many parts, and the utter neglect, and indeed ignorance, of true melody, were such, as to render his reasoning just and necessary; but, at present, however harmony may be sometimes abused, it must be allowed that great and pleasing effects are produced from it, by composers of genius, taste, and experience, who, from the study of contrast, know when to multiply the parts, and when to disentangle melody.

Having given the opinions of the most respectable writers on both sides of this long disputed question, it now remains to tell the reader ingenuously my own sentiments: and, to confess the truth, I will venture to say, that I do *not* believe the ancients ever did use *simultaneous harmony*, that is, *music in different parts*; for without thirds and sixths it must have been insipid; and with them, the combination of many sounds and melodies moving by different intervals, and in different time, would have occasioned a confusion, which the respect that the Greeks had for their language and poetry, would not suffer them to tolerate.

It has been frequently urged, and with apparent reason and probability, that ignorance and knowledge, taste and inelegance, could not be so much united in the same people, as that they should be possessed of every kind of refinement and perfection in poetry, sculpture, and architecture, and yet be delighted with a rude, coarse, and ordinary music. But stop any one principle of improvement in an art, or single wheel in a watch, and it will check all the rest; tie up one leg of an animal, to whom nature has even given four, and it will impede his progressive motion. The Turkish religion has not only stopt the advancement of human reason wherever it has been established,

established, but totally suppressed all the acquirements of former ages. If, therefore, it was a law with the ancients to regulate their melody by the length and number of syllables; and if every thing that was thought to injure poetry, by distracting the attention from it, and rendering it difficult to be understood, was avoided, the multiplicity of concords in simple counterpoint, and the contrary motion of parts in sounds of different lengths, in more florid compositions, must have been held in utter abhorrence.

But music has not always kept pace with other arts in those countries, where they have been most successfully cultivated. Painting, poetry, and sculpture, in Italy, during the sixteenth century, greatly surpassed the music of that period; and in France, though the compositions of Lulli, in Louis the fourteenth's time, were at least as much extolled by the natives, as those of the greatest musicians of ancient Greece, by such as either heard them, or heard of them; yet the French themselves, now, are of the same opinion as the inhabitants of other parts of Europe have long been, in thinking them not only greatly inferior to the best productions of the same period in all the other arts, but wholly intolerable and detestable.

I well know that many passages in ancient authors are pointed out as favourable to the side of music in parts; but what can *not* be found there by those who are determined to see whatever they seek? However, counterpoint seems as much a *modern invention*, as gunpowder, printing, the use of the compass, or circulation of the blood; and if more proofs against its ever having existed are not given, it is not for want of them, but for fear of tiring the reader. One observation more, however, I must add, as it seems conclusive, and has not, to my knowledge, been urged by any other writer.

It is generally allowed that the ecclesiastical modes, and *Canto Fermo* of the Romish church, are remains of the ancient Greek music; and as these have ever been written in manuscript mis-
fals,

fals, *without parts*, and been always chanted in *unisons* and *octaves*, it is a strong presumptive proof, among others, against the ancients having had *counterpoint*, as this species of melody is so slow and simple, as to be more capable of receiving, and, indeed, to stand more in need of, the harmony of different parts, than any other.

The chief use, therefore, which the ancients made of concords in music, seems only to ascertain intervals and distances; as in our first lessons of solmisation it has been customary to spell intervals, as it were, by naming the intermediate sounds; as *do re mi, do mi; do re mi fa, do fa; do re mi fa sol, do sol, &c.*

Upon the whole, therefore, it seems demonstrable, that *harmony*, like ours, was never practised by the ancients: however, I have endeavoured to shew, that the stripping their music of counterpoint does not take from it the power of pleasing, or of producing great effects; and, in modern times, if a Farinelli, a Gizziello, or a Cafarelli, had sung their airs wholly without accompaniment, they would, perhaps, have been listened to but with still more pleasure. Indeed the *closes* of great singers, made wholly without accompaniment, are more attended to than all the contrivance of complicated parts, in the course of the airs which they terminate.

An elegant and graceful melody, exquisitely sung by a fine voice, is sure to engage attention, and to create delight without instrumental assistance; and in a solo, composed and performed by a great master, the less the accompaniment is heard, the better. Hence it should seem as if the harmony of accumulated vocal parts, or the tumult of instrumental, was no more than a succedaneum to a mellifluous voice, or single instrument of the first class, which is but seldom found. However, to diversify and vary our musical amusements, and to assist in dramatic painting, a full piece, and a well written chorus, have their peculiar merit, even among songs and solos, however elegant the composition, or perfect the performance.

SECTION

SECTION IX.

Of Dramatic Music.

ARISTOTLE tells us, in his *Poetics*, that music, *μελοποιία*, is an essential part of tragedy; but how it became essential, this philosopher does not inform us. M. Dacier has endeavoured to supply this omission, by suggesting, that custom, and a natural passion implanted in the Greeks for music, had incorporated it into their drama. Indeed Aristotle calls it, in the same work, "the greatest embellishment that tragedy can receive." And innumerable passages might be quoted from other ancient writers, to prove, that all the dramas of the Greeks and Romans were not only sung, but accompanied by musical instruments.

However, many learned critics, not reflecting upon the origin of tragedy, and insensible, perhaps, to the charms of melody, have wondered how so intelligent a people as the Greeks could bear to have their dramas sung. But as antiquity is unanimous in deriving the first dramatic representations at Athens, from the *Dithyrambics*, or songs, sung in honour of Bacchus, which afterwards served as chorusses to the first tragedies, we need not wonder at the continuation of music in those chorusses, which had been *always* sung. Nor will the custom of setting the *episodes*, as the acts of a play were at first called, appear strange to such as recollect that they were written in *verse*, and that *all verse was sung*, particularly such as was intended for the entertainment of the public, assembled in spacious theatres, or in the open air, where it could only be heard by means of a very slow, sonorous, and articulate utterance.

It is true that tragedy is an imitation of nature; but it is an exalted, and embellished nature: take away music and versification,

cation, and it loses its most captivating ingredients. Those who think it unnatural to *sing* during distress, and the agonies even of death, forget that music is a language that can accommodate its accents and tones to every human sensation and passion; and that the colouring of these on the stage must be higher than in common life, or else why is blank verse, or a lofty and figurative language, necessary (a)?

From these, and other circumstances, mentioned in the course of this section, there can remain no doubt but that the ancient dramas were *sung*: dramatic recitation having been constantly called by the Greeks, *μελος*, *melody*; and by the Latins, *modulatio*, *modus*, *canticum*, and other musical terms, which imply *singing*.

Indeed, so immense was the size of the theatres of Greece and Italy, that we may naturally conclude a *musical* declamation for the stage to have been a necessary consequence of speaking loud; for whoever shouts, hallows, or bawls, with sufficient force to be heard further than common speech can penetrate, makes use of fixed tones, which, if softened, would become musical: and it is well known that the tones of speech are too transient and undetermined to be ascertained by those of music, or to be audible at a great distance, or in a wide space.

This want of natural power of voice sufficient to be heard in the open air, for the ancient theatres had no cover, and by a great multitude, gave rise not only to *singing* upon the stage, but, perhaps, to *chanting* in the church. The necessity of augmenting the force of a performer's voice by every possible means, likewise first suggested the idea of *metallic masks*, which were used by the actors upon the principle of speaking trumpets, and to that of the *echeia*, or *harmonic vases*; two

(a) The stage cannot subsist without exaggeration; as verse is the exaggeration of common speech, so music is that of verse:

in like manner, exaggerated gesture becomes dancing.

expedients so peculiar to the ancient drama, that it seems necessary to give some account of them.

The mask was called by the Latins *persona*, from *personare*, to *sound through*, and delineations of such masks as were used in each piece, were generally prefixed to it, as appears from the Vatican Terence. Hence *dramatis personæ*, *masks of the drama*; which words, after masks ceased to be used, were understood to mean *persons of the drama*.

Quintilian, lib. ii. gives a list of invariable masks appropriated to different characters, to which the public had for many ages been accustomed. Niobe, weeping; Medea, furious; Ajax, astonished; and Hercules, enraged. In comedy, the slave, the parasite, the clown, the captain, the old woman, the harlot, the austere old man, the debauched young man, the prodigal, the prudent young woman, the matron, and the father of a family, were all constantly characterised by particular masks. This custom is, in some measure, still preserved in the Italian comedy, and in our pantomime entertainments, which originated from it (b).

“The spectators, says du Bos, speaking of the ancient theatre, lost but little on the side of *face-playing*, by the introduction of *masks*; for not one third of the audience were near enough to the actor to discern the play of muscles, or working of the passions in the features of his face; at least to have received pleasure from them; for an expression must have been accompanied with a frightful grimace and distortion of visage, to be perceptible at so great a distance from the stage (c).”

(b) The ancients had three several kinds of masks; the tragic, comic, and satiric. Lucian, *de Saltat.* speaks still of a fourth kind, peculiar to dancers, of which the mouths were shut; whereas the others were always open, and of an enormous size.

(c) For the form of these masks, see Plate IV. No. 1. 2. and 3. No. 1. is taken from an antique figure in metal, of Greek sculpture; the mask covered the whole

head of a person singing on the stage. No. 2. is likewise taken from an antique mask in metal. It has a large mouth in the shape of a shell; and by the horror expressed in the countenance, it seems to have been the mask of a tragic actor, reciting some terrible event upon the stage. “The wide mouth, in the form of a shell, says Ficoroni, so common in the ancient masks, served to augment the power of the voice,

THE HISTORY OF THE

101

THE HISTORY OF THE

Grignon Sculp.

With respect to the *echeia*, or *vases*, used in theatres for the augmentation of sound, Vitruvius, book V. cap. 5. tells us, that they were placed in cells or niches, between the rows of seats occupied by the spectators, to which the voice of the actor had free passage; that they were made of brass, or earthen ware, and proportioned in magnitude to the size of the building; and lastly, that in the small theatres, they were tuned in harmonical proportions of fourths, fifths, and eighths, with their replicates; and in theatres of great magnitude, there was a vase to correspond with every sound in the disdiapason, or great musical system, in all the genera.

The Romans, according to the same author, were obliged to the Greeks for this invention, as well as for tragedy itself. For the *echeia* were brought first into Italy from Corinth, by Mummius. Perhaps they had something of the effect of the whispering gallery at St. Paul's church, which, by its orbicular form, augments sound in the same manner as the belly of an instrument, a hog'shead, or a draw-well.

Sir Francis Bacon long since observed, that sound diffuses and wastes itself in open air; but if inclosed and confined in a canal, or narrow limits, its force is augmented; and adds, that inclosures not only encrease and fortify sound, but *preserve* it (*d*). Resonance is but an aggregate of echos, or of quick repetitions and returns of the same sound, which soon uniting into one point, are consolidated and embodied; and by this means, the force of the tone first given is greatly augmented upon the delivery, and preserved some time after the first cause ceases. This constitutes the *ringing* of musical instruments, and places favourable to sound; but with respect to the *whisper*,

voice, upon the principle of a speaking-trumpet." *Quella bocca a conchiglia, che si vede in altre maschere, serviva per ingrandire la voce, come succede nelle trombe a proporzione.* Le Maschere Sceniche, cap. xvii. and xxii. See likewise Dacier's and Colman's Terence. No. 3. is taken from

the mask held in the hand of Thalia, the comic muse, one of the most perfect and beautiful of the ancient paintings in the museum at Portici; it was dug out of Pompeii. See *Antich. de Ercolano. tom. ii.*

(*d*) *Nat. Hist. Cent. 2d and 3d.*

which is instantly carried from the person who utters it, to the opposite side of the gallery, it runs along the smooth surface of the wall, and arrives at the place of its destination with nearly the same degree of force as it is delivered.

It is not easy now, however, to describe, or even to conceive, the form and effects of the theatric vases; it is enough for the present purpose that their existence and use are recorded by so scientific a writer as Vitruvius. Our smaller theatres luckily, are in want of no such helps; but this is certain, if these vessels were tuned to musical tones and intervals, nothing but noise and confusion could be produced from them by *common speech*, or such as is used in *modern declamation*. For if any one cough, speak loud, or strike forcibly upon the case of a harpsichord, with the lid propped up, or on any hard body near it, the shock will make every string in the instrument sound at the same instant; but if a fixed and musical tone be produced by the voice, or upon a violin or flute, none but the unison will be heard upon the harpsichord; and though the cloathing of the jacks be in close contact with all the strings, which renders it impossible to produce a clear tone from any one of them, by the common means of quills, or hammers, yet if any person sing near them, every note will be exactly echoed by the instrument.

If, therefore, these *echeia* were of the use related by Vitruvius, it must have been from the voice approaching them in fixed and musical tones, modulated in unison with the tones of the vases (e).

Every thing was upon a large scale in the ancient theatres. The figure, features, and voice, were all gigantic. The voice was, in a particular manner, the object of an actor's care; nothing was omitted, says father Brumoy, that could render it

(e) The best commentary upon this obscure subject in Vitruvius is that of Perrault, who has given an engraving of part of an ancient theatre, on purpose to ex-

hibit the situation of the harmonic vases. *Les dix Livres d'Architecture de Vitruve*. Par. 1684. 2d Edit. folio.

more.

more sonorous; even in the heat of action it was governed by the tones of instruments, that regulated the intervals by which it was to move, and to express the passions.

What kind of music was applied to the *episodes* and *chorusses* of tragedy, is another enquiry: some idea may perhaps be obtained concerning it, without having recourse to conjecture; for Plutarch (*f*) tells us, that the dithyrambic and tragic poets, adopted for their pieces that kind of musical execution, of which Archilochus is said to have been the inventor (*g*). The same author likewise informs us, that Archilochus performed the music to his iambic verses in two different ways; *reciting* some of them to a *partial* accompaniment, and *singing* others, while instruments fervilely performed the *same notes* as the voice; and this was the method which the tragic poets afterwards adopted (*h*).

We learn from this same work of Plutarch, that even the declamatory iambics were accompanied by the *Cithera*, and other instruments; but as the employment of the *Cithera* upon these occasions was not constant, it seems as if only the general tone of declamation was given to the actor by the musician, as the chord is given to the singer in modern recitative; whereas in the chorus, and other poetry that was *sung*, the instrument constantly accompanied the voice, *note for note*.

Hence it appears that the ancient dramatic writers had a different kind of *melos* for the declamation of the actors, and for the songs of the chorus (*i*). The one may perhaps be compared to modern *recitative*, and the other to *chanting* in the Romish church (*k*).

(*f*) Dial. upon Music.

(*g*) Archilochus flourished about six hundred and sixty years before Christ.

(*h*) Iambics, or satyrs, are supposed to have given birth to comedy, as dithyrambics did to tragedy: and it is somewhat remarkable that religious mysteries should have furnished subjects for the first dramatic exhibitions among the ancients as well as the moderns.

(*i*) Aristotle, in his *Poetics*, chap. xxvii. speaks of two different kinds of rhapsodists; one of which *recited* epic poems, and the other *sung* them.

(*k*) Father Menestrier conjectures, that the practice of *chanting* and *singing* in the church, was derived from the ancient manner of declaiming and singing in public. *Traité des Représentations en Musique, Anc. et Mod.*

That

That this music was simple, and intended to render speech more articulate, as well as to fortify passion, both reason, and the authority of ancient writers enable us to believe.

Plutarch (1) says, "that the chromatic genus was never used in tragedy." Now, if the ancient dramas were declaimed in a species of *recitative*, it will bring it still nearer the recitative of modern musical dramas, in which no chromatic is ever admitted.

Plutarch likewise informs us, that *rhythm*, or strict measure, was not observed in tragedy; another circumstance resembling modern recitative, in which no time is kept but that of the accent and cadence of the verse. And this assertion of Plutarch seems to agree with what Aristotle says in his *Poetics*, chap. 1. "That dithyrambics, nomes, tragedies, and comedies, use alike number, verse, and harmony, with this difference, that in some all three are employed at once, in others, they are used separately."

By *number*, or *rhythm*, is here meant regular time; and by *harmony*, music, or song. In dithyrambics and nomes the verse was always accompanied by melody, rhythm, and dance (m); and in tragedy and comedy, the verse was alone *recited* during the course of the acts; but in the chorusses it was accompanied by singing and dancing.

As candour forbids the loading the ancients with more customs, that are repugnant to modern ideas of propriety, than

(1) *Ubi supra.*

(m) *Dithyrambics* and *nomes* were equally hymns sung in honour of the Gods. The *nomes* were for Apollo, as the *dithyrambics* were for Bacchus. Now the literal meaning of *νομος*, *nome*, being a *law* or *rule*, it should seem as if, after the invention of musical characters, the *nomes* were the first melodies, or tunes, that were written down, and rendered permanent and unalterable; whereas, before that period, music must have been played extempore, or by memory: and as Terpander, the inventor of a musical notation, is likewise said to

have set the *νομος*, or *law* of Lycurgus, to music, the conjecture has both a literal and a figurative foundation. Aristotle, Prob. XVII. 28. asks why such different things as *laws* and *songs* had the same appellations? and answers the question himself, by saying, that before the knowledge of letters, *laws* were *sung*, in order to their being the better retained in memory. But if, according to Josephus, the word *νομος* is not to be found in all the writings of Homer, it must, consequently, be a more modern term.

can be warranted by good authority, I shall endeavour to acquit them of some part of that excessive fondness for dancing, which many writers have laid to their charge, by supposing that not only the chorus, but the principal characters of the drama, were continually dancing all the time they were upon the stage. Indeed *Xopos*, *chorus*, equally means a band of fingers, and a company of dancers. Many instances occur, however, in ancient authors, where dancing in the old drama of the Greeks, seems but another word for moving and acting gracefully; and the term *hypocritic*, which the Greeks likewise call *orchesis*, and the Latins, *saltatio* though it sometimes means dancing, more frequently is used to express gesture, or theatrical action. In the younger drama, according to Lucian (*n*), a single dancer, or *mime*, was able to express all the incidents and sentiments of a whole tragedy, or epic poem, by dumb signs, but still to music, as the actors recited it; though Aristotle expressly says, that dancers want neither poetry nor music, as by the assistance of measure and cadence only, they can imitate human manners, actions, and passions.

The strange custom of dividing the declamation and gestures, or speaking and acting, between two persons, was never thought of by the Greeks. It is mentioned by Livy as an invention of Titus Andronicus, an old Roman poet, who flourished two hundred and forty years before Christ, in order to save himself the fatigue of singing in his own piece; to which he, like other authors of his time, had been accustomed. But being hoarse by repeating a whole play that had been *encored*, he obtained permission to transfer the vocal part to a young performer, retaining to himself only the *acting*, which he was able to go through with the more fire and propriety, says Livy, by being exempted from the labour of singing. M. Duclos endeavours to prove, that as the *Canticum* of Andronicus was composed of songs and dances, the words of Livy, *canticum*

(*n*) *De Saltatione.*

egisse aliquanto magis viginti motu, quia nihil vocis usus impedi-
ebat, imply no more than that the old poet, who at first sung
 his *Canticum*, or, if you will, his *Cantata*, and afterwards
 danced in the interludes alternately, having sung till he was
 hoarse, transferred the singing to another performer, in order
 to dance with more force and activity; and from thence came
 the custom of making singing and dancing two different pro-
 fessions (o).

The Greek dramas consisted of soliloquy, dialogue, and cho-
 rus; but as the chorus was never adopted in the Latin co-
 medy, it has been imagined, that such *cantica*, or soliloquies,
 as were full of sentiment and passion, had a different, and
 more elaborate and refined melody and accompaniment set to
 them, than the *diverbia*, or dialogues; and that, like the cho-
 rus of the Greek tragedy, they served as interludes, or act
 tunes. But I have been able to meet with no satisfactory
 proof of these *cantica*, or songs, being a part of the piece, like
 the Greek chorus: for though Flaccus is mentioned as com-
 poser of the modes, or melodies, to which all the six come-
 dies of Terence were sung, no notice is taken of a different
 music for the *cantica*, or even interludes, if such there were,
 used between the acts. Some of the soliloquies in Terence
 seem too short and trivial to be sung to different music from
 the *diverbia*; and others, that are longer and more sentimental,
 have no distinction of versification, like the odes or chorusses
 of Greek tragedy, to point them out as *cantica*; but are all in
 the same free iambic verse as the *diverbia*.

Donatus, who flourished three hundred and fifty years after
 Christ, tells us, indeed, that "though the dialogues were
 spoken, the *cantica* were set to music, not by the poet, but by
 an able composer (p)." I should therefore rather imagine that

(o) *Encyclop. Art. Declamation des An-*
ciens.

poetâ, sed à perito artis musices factis. Scho-
lia in Terent.

these

these *cantica* of the Latin comedy were real *intermezzi*, or *interludes*, wholly detached from the piece, and, perhaps, not only the productions of a different composer, but of a different poet.

The melody of ancient declamation being then only a species of recitative, could receive nothing but a poetical rhythm, far less exact than one strictly *musical*; exact, indeed, as to long and short syllables, but as it approached nearer to common speech than air, so it must have been more lax and incommensurate as to time, than measured melody, such as constitutes air at present. Long and short syllables are rigorously attended to in modern recitative, the words are strongly accentuated, and yet the musical measure, or time, is never attended to, or beaten.

M. de Voltaire, so much attached to the ancient drama, and so little to modern music, says, we can no where find such an exact resemblance of the Greek stage, as in the Italian opera. "The Italian recitative is precisely the *melopoeia* of the ancients; and though this recitative is tiresome in ill-written pieces, yet it is admirable in good ones; and the chorusses in some of them, which are interwoven in the subject, resemble the ancient chorus so much the more, in being set to a different kind of music from the recitative; as the strophe, epode, and antistrophe, were sung by the Greeks quite differently from the *melopoeia* of the rest of the play."

"I know, continues M. de Voltaire, that these tragedies, so bewitching by the charms of the music, and magnificence of the decorations, have a *defect* which the Greeks always avoided; a defect which has transformed the most beautiful, and, in other respects, the most regular tragedies that ever were written, into monsters: for what can be more absurd than to terminate every scene by one of those *detached airs*, which interrupt the business, and destroy the interest of the drama, in order to afford an opportunity to an effeminate throat to shine

in trills and divisions, at the expence of poetry and good sense (q)."

The last period of this quotation proves the impossibility of satisfying all parties in theatrical disputes; for those very airs which are so delightful to lovers of music, and which alone render an opera supportable to them, are regarded by the exclusive lovers of poetry as the only blemishes in this kind of drama, which render it inferior to the Greek. However, notwithstanding the acknowledged merit of particular scenes of recitative in an opera, I am inclined to believe, if the *airs* were omitted, that the rendering this kind of spectacle more Grecian, would neither encrease the number of its admirers, nor enrich the managers of the theatre.

Indeed all modern musicians, who have imagined that they have discovered what ancient dramatic music was, suppose it to have been a species of recitative, as will be shewn hereafter, in the specimens that will be given of the music of the first operas and oratorios.

The abbé du Bos has not scrupled to assert boldly, that the actor, in the ancient dramas, was accompanied by a *basso continuo*, not like that of the French opera, but like the base accompaniment to Italian recitative; and determines, from a passage and plate in Bartholinus (r), that the instrument upon which this *continued base* was played, was a *flute* (s)! With the same courage, and the same truth, this lively author asserts (t), that the *femeia*, or musical characters of the Greeks, were nothing more than the initial letters of the names of the sixteen notes in the great system, or diagram! Opinions which merely to mention is to confute.

M. Duclos, contrary to the general opinion, denies, in the article above cited, that the *melos* of Greek tragedy was *singing*,

(q) *Dissert. sur la Tragedie Ancienne et Moderne.*

(r) *De Tibiis Veterum.*

(t) *Ib. p. 80.*

or even *recitative*, to fixed and musical tones; but if not, why does Aristotle tell us, that music was an *essential part of tragedy*? or how could the lyres and flutes, with which declamation was accompanied, and of which the tones were fixed and musical, be either useful to the actor, or *an embellishment to the piece*? There are several passages in Cicero, concerning Roscius, which, if the ancient actors, Roman, as well as Greek, did not declaim in musical notes, would be wholly unintelligible. He tells us, *de Orat.* that Roscius had always said, when age should diminish his force, he would not abandon the stage, but would proportion his performance to his powers, and make music conform to the weakness of his voice; which really happened; for the same author informs us, *de Leg.* that in his old age he sung in a lower pitch of voice, and made the *tibicines* play slower (*u*).

M. Duclos, who has censured so many of the bold and hazarded assertions of the abbé du Bos, falls into one of his worst mistakes, by saying, that the ancient declamation, which he denies to have been *musical*, was accompanied by a base part played on the flute. But besides the absurdity, I must call it, of a *base* played on a *treble* instrument, it seems demonstrable, that no kind of base accompaniment was known to the ancients.

We have the authority of Plutarch, however, for the recitation of tragedy among the Greeks having been accompanied by the *cithera*, and other stringed instruments, after the manner in which Archilochus had accompanied his iambics.

The Roman comedy, in the time of Terence, was accompanied *tibiis paribus et imparibus*, with *equal and unequal flutes*, occasionally. This is upon record in all the most ancient manuscripts of that author. What these *double flutes* were, or

(u) Solet idem Roscius dicere, se, quo plus In senectute numeros in cantu ceciderat, ip-
sibi accederet ætatis, eo tardiores tibicinis saque tardiores fecerat tibia.
modos et cantus remissiores esse facturum.—

how played upon by one person, has much perplexed the learned, as well as practical musicians. For my own part, I had long been of opinion, that the *equal* flutes were *unisons*, and the *unequal* octaves to each other, blown by one mouth-piece, before my journey into Italy; and the numerous representations I saw of them there in ancient sculpture, did not furnish me with any more probable conjecture. But frequent occasions will occur of speaking further upon these instruments, of which drawings will be given in the course of the work.

It now remains to speak of the *chorus* so celebrated in the tragedy of the ancients.

In the most flourishing times of the Athenian republic, so great was the passion of the people for shews and public spectacles, that the government, which was at the charge of these exhibitions, has been accused by Plutarch, of supporting them at a greater expence than their fleets and armies.

The performers of the odes, or full chorusses, were multiplied in the time of Æschylus to fifty persons. Indeed their number was afterwards reduced by a law to fifteen. Their chief, or leader, who was called *Coryphæus*, frequently spoke in the course of the drama as a single person, and sometimes for the whole band, either in dialogue with the characters of the piece, or to acquaint the audience with what was going forwards, as well as to pity virtue in distress, or to deplore the unruly passions of the vicious. Father Brumoy calls him *l'honnête-homme de la piece*.

The great chorusses, or interludes, were generally four in number; and, in the beginning of tragedy, they served as act tunes. Æschylus first interwove them into the texture of the drama; and, according to Dacier, there was something different in the versification and melody of each chorus, which distinguished it from the rest so much, that let a person enter the theatre when he would, it was easy for him to discover by the music of the chorus what part of the piece was then representing.

As the acts of a play were at first but episodes, or interludes, between the dithyrambics, or chorusses; in process of time they changed hands, and the chorusses became a species of act tunes, or interludes, to the episodes, or *cantica* and *diverbia*, formed into scenes and acts. Dr. Franklin denies this division into acts; and he seems right in denying the number to have been constantly five; but that the great chorusses were wrought into a more lofty and sublime kind of poetry, and of different measure from the soliloquies and dialogues, is so certain in all the ancient tragedies that are come down to us, that it has been said, if during the acts the interlocutors spoke the language of heroes and kings, in the chorusses they spoke that of the gods; and it is equally certain that they were generally performed in the absence of the interlocutors of the play. Indeed the stage was never empty, nor were the performers idle; so that when the chorusses were incorporated in the piece, as in some of the tragedies of Sophocles, it may be said strictly to consist of only one act.

The Greek name for act being *δραμα*, *drama*, it encourages an opinion, that in the beginning of theatrical exhibitions, each chorus and episode was a distinct and entire piece. The Romans, however, understood by the term *actus*, a part of a play, divided by another part; and the intermediate space of time between these divisions was either filled up by a chorus, a dance, or a song. In the time of Horace, the number of five acts seems to have been settled for the Roman theatre; and in the comedies of Terence, and tragedies of Seneca, that number is constant.

The Greek tragedies being composed of fifteen or sixteen hundred verses, would be too long, if sung to airs like ours, and too short, if spoken. Relaxation, however, was necessary both to the actors and the audience; and this, if it did not give birth to the chorus, at least established it into a custom to have a chorus between the principal divisions of the piece.

A. drama.

A drama is composed of many circumstances, out of which the poet chuses such as are most proper for the stage, and most interesting in the representation : the rest are understood to be transacting elsewhere ; and in order to allow time for these external circumstances, the space between the acts of ancient dramas was filled up by the chorus, or other *intermediate* amusements.

In all the Greek tragedies that are come down to us, the action is interrupted from time to time by the intervention of chorusses, which fill up the intermediate space between the principal events of the piece ; during which time the interlocutors are either absent, or remain silent and inactive upon the stage ; and these are the true divisions of the drama into acts. But that these always amount to four, five, or any stated number, cannot be proved by the ancient manuscripts of the Greek dramatic poets, however new editions and modern critics may have divided them.

If the number of odes, or great chorusses, is to determine the division into acts, they amount most frequently to six or seven.

Each of these principal odes, or chorusses, consisted of three couplets, or stanzas ; the *strophe*, *antistrophe*, and *epode*.

Demetrius Triclinius, in his book upon the verses of Sophocles, says, that the *strophe* was sung by the chorus moving to the right ; the *antistrophe* to the left, and the *epode*, after performing these two evolutions, without moving at all. He asserts that, by these evolutions, which were borrowed from the Ægyptians, the Greeks meant to imitate the course of the heavenly bodies ; that by the *strophe*, and wheeling to the right, they designed the movement of the fixed stars ; by the *antistrophe*, and turning to the left, was indicated the course of the planets ; and that the *epode*, which was performed without any motion, shewed the fixed situation of the earth. Pindar, in his Odes, has introduced the same changes ; probably because in singing them, the same evolutions were performed. Theseus, when he
returned

returned from Crete, invented a dance consisting of different turnings, in memory of the labyrinth, which was afterwards adopted by the tragic chorus. But as to the manner of moving from the right to the left, it is very difficult to form any idea of it. M. Dacier says, "I am of opinion that the chorus was parted into two divisions, as among the Hebrews; the band to the right began, advancing to the left half the breadth of the theatre, and this was the *strophe*; the other troop did the same, and this was called the *antistrophe* (x)."

The profession of an actor was long honourable among the Greeks. Their poets, who were likewise orators, statesmen, and generals, performed the principal parts in their own pieces; and Sophocles, who was the first that did not appear on the stage in his tragedies, was compelled to decline it, by the want of voice.

Livy, *lib. vii. cap. 2.* tells us, that Andronicus, who first wrote regular plays among the Latins, acted in his own pieces, as every author, at that time, did: and all antiquity asserts, that the first poets were musicians, and that music was inseparable from poetry: but the Greek dramatic poets not only set their own pieces to music, but regulated all the steps and attitudes of the dancers in the chorus, and the gestures of the actors. It was the opinion of Fontenelle, that musical dramas could never satisfy men of learning and taste, till the poet and musician were again united in the same person; and when the *Devin du Village*, which was both written and set by M. Rousseau, was so universally approved, and had so long a run during its first representation at Paris, he attributed its great success to this union.

"Ancient Greece had many musicians, says M. Dacier (y), who were not poets, but not one poet who was not a musician, and who did not compose the music of his own pieces:

(x) *Theatre des Grecs, du pere Brumoy,*
tome I.

(y) *Remarques sur la Poetique d'Aristote,*
p. 105,

Musici qui erant quondam iidem poetæ, says Cicero; for in Greece, music was the foundation of all sciences; the education of children was begun by it, from a persuasion that nothing great could be expected from a man who was ignorant of music. This probably gave the Greek poetry such a superiority over the Latin, as well as over that of modern languages; for at Rome poetry and music were two distinct arts, and poets were there obliged to give their pieces to be set by musicians, as is the case at present every where else."

Such were the sentiments of this profound critic, and these were likewise the opinions of the late Dr. Browne, and are those of most learned men, who, being out of the way of good music, and good performers of the present times, have formed a romantic idea of ancient music upon the exaggerated accounts of its effects, which they have read in old authors.

The abate Metastasio, more a man of the world, and more reasonable, confesses, that the study of modern music requires too much time for a man of letters ever to be able to qualify himself for the business of a composer.

The Greeks, indeed, during the time of their education, had no language to learn but their own: hence they had more time for other studies. But with all the simplicity of their music, the poets themselves being able to set their own pieces, and to sing them so well to the satisfaction of the public, is to me a certain proof that their music had not only fewer difficulties, but fewer excellencies than the modern.

This is not the place to discuss the point; but it appears to me as if the being at once a great poet, and a great musician, were utterly impossible; otherwise why should not such a coincidence of talents frequently happen? Milton studied music, and so have many of our poets; but to know it equally well with a professor, is a drudgery to which they cannot submit; besides, a genius for poetry is so far from including a genius for music, that some of our greatest poets have not only been
enemies

enemies to harmony, but have had ears so unfortunately constructed, as not to enable them to distinguish one sound from another.

The Grecian sage, according to Gravina (x), was at once a philosopher, a poet, and a musician. "In separating these characters, says he, they have all been weakened; the sphere of philosophy has been contracted; ideas have failed in poetry, and force and energy in song. Truth is now extinguished from among men; the philosopher no longer speaks through the medium of poetry, nor is poetry any more heard through the vehicle of melody." Now, to my apprehension, the reverse of all this is exactly true; for, by being separated, each of these professions receives a degree of cultivation, which fortifies, and renders it more powerful, if not more illustrious. The music of ancient philosophers, and the philosophy of modern musicians, I take to be pretty equal in excellence.

Having now mentioned the principal subjects of the ancient drama, as far as they concern music, such as the *masks*, *echeia*, *melopoeia* of the *cantica*, *diverbia*, and *chorusses*, divided into *strophe*, *antistrophe*, and *epode*; the *accompaniments* of these by the *cithera* and *flutes*, *equal* and *unequal*; the *union* of *poet* and *musician*, in the authors of ancient dramas; all which, singly, and collectively, prove the declamation of the Greeks and Romans to have been musical, and regulated, like the recitative of modern operas, by a notation: I shall now bestow a few words upon the expediency and possibility of reducing modern declamation in the natural tones of speech, unaccompanied by musical instruments, to a *notation*, such as would accurately mark the elevation, depression, and inflexions of voice, as well as determine its degree of force, and the accentuation of words and syllables. As to the expediency of such an invention, it seems on many occasions devoutly to be wished; but, for the possibility of its being practicable, that is certainly very prob-

(x) *Della Ragion Poetica.*

lematical. However, Dionysius Hallicarnassus, *de Struct. Orat.* (y), tells us, in a famous passage which has often been discussed, that "the fifth was the common boundary to the melody of speech:" that is, says the abbé Arnaud (z), "the tones which constitute language, were commonly all comprised within the compass of a fifth, and the inflexions of voice extended to all the several degrees of that interval. Each word had its accent; the syllable was elevated by the acute accent, and lowered by the grave. This rule was fixed and unalterable; the degree of high and low was free and various; and it was this variety and freedom, which threw not only grace and variety into the pronunciation, but which served to shew the limits and even shades of elocution."

Many passages from Cicero, Quintilian, Plutarch, and Boethius, might be cited, to prove, that not only musicians and actors, but even orators, had a notation, by which the inflexions of voice, peculiar to their several professions of singing, declaiming, and haranguing in public, were ascertained (a).

But the orators, though not constantly accompanied by an instrument, yet had their voices regulated by one, which Quintilian calls a *tonarium*, Cicero, a *fistula*, and Plutarch, *συσφύριον*, or *syrinx*, which is the same thing; and this instrument served as a kind of *pitch-pipe*. Both Cicero (b) and Plutarch (c), relate the well-known story of the voice of the furious tribune, Caius Gracchus, being brought down to its natural pitch, after he had lost it in a transport of passion, by means of a servant placed behind him with one of these instruments (d). It is not

(y) Sect. ii. p. 76. Edit. Upton.

(z) *Mem. de Litterature*, tome xxxii. p. 442.

(a) As there were combats, or contests, established by the ancients for the voice, as well as other parts of the *Gymnastice*, those who taught the management of the voice were called *φωναστοι*, *phonastai*; and under their instructions were put all those who were destined to be orators, singers, and comedians. Roscius had an academy

for declamation, at which he taught several persons, preparatory to their speaking in public, or going on the stage. He had a law-suit with one of them, in which Cicero pleaded his cause.

(b) *De Orat.* lib. iii.

(c) *In Vit. C. Gracch.*

(d) Cicero, who tells us that this *tibicen*, with his *flapper*, *qui staret occultè post ipsum*, and was not seen by the people, does not confine his employment to appeasing the passion.

easy, however, to conceive of what use this expedient could be, unless rhetorical tones were regulated by those of music.

M. Duclos (e) denies the possibility of a notation for speech, as the intervals are too minute to be ascertained, and in this, perhaps, he is not mistaken; but when he adds that, "even if such an invention were possible, the use of it would do more harm than good, as it would serve no other purpose than to render actors cold and insipid; for by a servile imitation they would destroy the natural expression which the sentiments inspire; and such notes would give neither the refinement, delicacy, grace, nor passion, which constitute the merit of an actor, and the pleasure of an audience." When he adds all this, I must say, that a well-written, and well-set scene of *recitative*, from the mouth of a great singer, and good actor, oversets all his reasoning; for though confined to musical notes, it has frequently great power over the passions of that part of an audience who understand the language. Give it to a man without voice, it will still be a fine piece of recitative; a bad singer, indeed, may spoil it: however, it escapes annihilation, and still remains to be taken up by a future performer of superiour talents; as a speech in Shakespeare does, that has been mangled by a stroller in a barn. But it is not to be wished, perhaps, that the tones of speech preserved by such notes, should be more permanent than those of music. Every new singer of peculiar powers is furnished with new compositions to old words, in order to display those powers; so might an actor: the plays of Shakespeare might be *reset*, as well as the operas of Metastasio; and upon such an occasion it were to be wished that Mr. Garrick would undertake to be the *composer*.

M. Duclos throws the impracticability of such an expedient upon the multiplicity of notes that would be necessary for

passion of his master; he was, upon occasion, to incite it: *Qui inflaret celeriter eum sonum, quo illum aut remissum exci-*

taret, aut à contentione revocaret.

(e) *Encyclop. Art. Declamat. des Anc.*

such minute inflexions ; a difficulty that seems obviated by the passage just cited from Dionysius ; which says, that the compass of voice in declamation, even during a scene of passion, seldom exceeds the interval of a fifth. I therefore cannot help giving a place to the invention of characters, for theatrical elocution among musical *desiderata*. Mr. Garrick, indeed, with seeming reason, objects to the use of them for himself, as “ they would render his declamation cold and monotonous, and deprive him of the power of varying the tones of his voice according to his present feelings.” But in answer to this it might be urged, that a great singer, notwithstanding the outline that is given him by the composer, seldom performs an air twice in the same manner ; though, on account of the accompaniments, and regularity of the measure, to which every change, or embellishment, must correspond, it is much more difficult to vary musical sounds in melody, than the tones of speech in declamation, which are not only unconnected with other parts, but uncontrouled by time.

It is far from being my wish ever to hear our tragedy *sung*, or pronounced in *recitative*, however desirable it may be to preserve the tones of voice used by great actors, if it were only to assist the young, the ignorant, and unfeeling candidates for theatrical fame.

Moliere, when he performed in his own plays, and Beaubourg, the actor, are confidently affirmed, by the abbé du Bos, to have *noted* their particular scenes of declamation (*f*). This author says that he does not wonder at actors by profession being, in general, against such restraint ; mankind is naturally fond of liberty in all things : *il ne veut pas être contraint dans ses allures* ; they will not be confined in their natural gait, says Montaigne. But though actors and actresses of the first class are sure to charm an audience, let their humour be what it will,

(f) *Reflex. Crit.* tome iii. sect. 18.

yet the notation of the tones, in which a favourite and affecting speech was spoken by a Garrick, or a Cibber, would not only be an excellent lesson to inferior actors, but would be a means of conveying it to posterity, who will so frequently meet with their names and elogiums, in the History of the Stage, and be curious to know in what manner they acquired such universal admiration.

S E C T I O N X.

Of the Effects attributed to the Music of the Ancients.

MATERIALS for this part of my Dissertation are so numerous, that if I were only to present the reader with all the stories that have been related by the most grave and respectable historians and philosophers of Greece and Rome, concerning the moral, medicinal, and supernatural powers of ancient music, this section would be as full of the *miracles* of musicians, as the *Golden Legend* is of those operated by the saints. The credulous and exclusive admirers of antiquity have, however, so long read and revered all these narrations, that they are impressed by them with an extravagant idea of the excellence of ancient music, which they are very unwilling to relinquish; and yet, after a most careful investigation of the subject, and a minute analysis of this music, by examining its constituent parts, I have not been able to discover that it was superiour to the modern in any other respects than its simplicity, and strict adherence to metrical feet, when applied to poetry. For, *as music*, considered abstractedly, it appears to have been much inferiour to the modern, in the two great and essential parts of the art, *melody* and *harmony*.

It

It shall therefore be my business in this section to collect and examine the principal facts, purely historical, that have been related by ancient writers, and which are urged by the moderns in its favour, under the three following heads :

First, of the effects of ancient music in softening the manners, promoting civilization, and humanizing men, naturally savage and barbarous :

Secondly, its effects in exciting, or repressing the passions :

And, thirdly, its medicinal power in curing diseases.

Among the effects of the *first* class, one of the most singular and striking is related by Polybius, the historian, a grave, exact, and respectable writer, who, in speaking of several acts of cruelty and injustice exercised by the Ætolians against their neighbours the Cynœtheans, has the following remarkable passage, which I shall give at full length from Mr. Hambden's excellent translation.

“ With regard to the inhabitants of Cynœtha, whose misfortunes we have just now mentioned, it is certain, that no people ever were esteemed so justly to deserve that cruel treatment to which they were exposed. And since the Arcadians, in general, have been always celebrated for their virtue throughout all Greece ; and have obtained the highest fame, as well by their humane and hospitable disposition, as from their piety also towards the Gods, and their veneration of all things sacred ; it may perhaps be useful to enquire, from whence it could arise, that the people of this single city, though confessed to be Arcadians, should, on the contrary, be noted for the savage roughness of their lives and manners, and distinguished by their wickedness and cruelty above all the Greeks. In my judgment then, this difference has happened from no other cause, than that the Cynœtheans were the first and only people among the Arcadians, who threw away that institution, which their ancestors had established with the greatest wisdom, and with a nice regard to the natural genius, and peculiar disposition

position of the people of the country ; I mean, the discipline and exercise of music : of that genuine and perfect music, which is useful indeed in every state, but absolutely necessary to the people of Arcadia. For we ought by no means to adopt the sentiment that is thrown out by Ephorus in the preface to his history, and which indeed is very unworthy of that writer, " That music was invented to deceive and delude mankind." Nor can it be supposed, that the Lacedæmonians, and the ancient Cretans, were not influenced by some good reason, when, in the place of trumpets, they introduced the sound of flutes, and harmony of verse, to animate their soldiers in the time of battle : or that the first Arcadians acted without strong necessity, who, though their lives and manners, in all other points, were rigid and austere, incorporated this art into the very essence of their government ; and obliged not their children only, but the young men likewise, till they had gained the age of thirty years, to persist in the constant study and practice of it. For all men know, that Arcadia is almost the only country, in which the children, even from their most tender age, are taught to sing in measure their songs and hymns, that are composed in honour of their gods and heroes : and that afterwards, when they have learned the music of Timotheus and Philoxenus, they assemble once in every year in the public theatres, at the feast of Bacchus ; and there dance, with emulation, to the sound of flutes, and celebrate, according to their proper age, the children those that are called the puerile, and the young men, the manly games. And even in their private feasts and meetings, they are never known to employ any hired bands of music for their entertainment ; but each man is obliged himself to sing in turn. For though they may, without shame or censure, disown all knowledge of every other science, they dare not on the one hand dissemble or deny, that they are skilled in music, since the laws require, that every one should be instructed in it ; nor can they, on the other hand,

hand, refuse to give some proofs of their skill when asked, because such refusal would be esteemed dishonourable. They are also taught to perform in order all the military steps and motions, to the sound of instruments: and this is likewise practised every year in the theatres, at the public charge, and in sight of all the citizens."

"Now to me it is clearly evident, that the ancients by no means introduced these customs, to be the instruments of luxury and idle pleasure: but because they had considered with attention, both the painful and laborious course of life, to which the Arcadians were accustomed; and the natural austerity also of their manners, derived to them from that cold and heavy air, which covered the greatest part of all their province. For men will be always found to be in some degree assimilated to the climate in which they live: nor can it be ascribed to any other cause, that in the several nations of the world, distinct and separated from each other, we behold so wide a difference, in complexion, features, manners, customs. The Arcadians, therefore, in order to smooth and soften that disposition, which was by nature so rough and stubborn, besides the customs above described, appointed frequent festivals and sacrifices, which both sexes were required to celebrate together; the men with women, and the boys with virgins; and, in general, established every institution, that could serve to render their rugged minds more gentle and compliant, and tame the fierceness of their manners. But the people of Cynoëtha, having slighted all these arts, though both their air and situation, the most inclement and unfavourable of any in Arcadia, made some such remedy more requisite to them than to the rest, were afterwards engaged continually in intestine tumults and contentions; till they became at last so fierce and savage, that, among all the cities of Greece, there was none in which so many and so great enormities were ever known to be committed. To how deplorable a state this conduct had
at

at last reduced them, and how much their manners were detested by the Arcadians, may be fully understood from that which happened to them, when they sent an embassy to Lacedæmon, after the time of a dreadful slaughter which had been made among them. For in every city of Arcadia, through which their deputies were obliged to pass, they were commanded by the public crier instantly to be gone. The Mantinæans also expressed even still more strongly their abhorrence of them: for as soon as they were departed, they made a solemn purification of the place; and carried their victims in procession round the city, and through all their territory."

"This then may be sufficient to exempt the general customs of Arcadia from all censure; and at the same time to remind the people of that province, that music was at first established in their government, not for the sake of vain pleasure and amusement, but for such solid purposes, as should engage them never to desert the practice of it. The Cynætheans also may perhaps draw some advantage from these reflexions; and, if the Deity should hereafter bless them with better sentiments, may turn their minds towards such discipline, as may soften and improve their manners, and especially to music; by which means alone, they can ever hope to be divested of that brutal fierceness, by which they have been so long distinguished (a)."

Though Polybius in this passage seems to attribute the happy change that was brought about in the manners of the Arcadians to music alone, it does not appear to merit all the honour, as a considerable part was doubtless due to the poetry that accompanied it; which being grave, majestic, and full of piety and respect for the gods and heroes, whose glorious actions and benefits were celebrated in it, must have had great influence upon the minds of young persons, in whose education those two arts had so considerable a share.

(a) Book IV.

Homer places a musician over Clytemnestra during the absence of Agamemnon, as a guard upon her chastity; and till he was sent away, her seducer, Ægisthus, had no power over her affections:

At first with worthy shame, and decent pride,

The royal dame his lawless suit deny'd.

For virtue's image yet possess'd her mind,

Taught by a master of the tuneful kind:

Atrides parting for the Trojan war,

Consign'd the youthful consort to his care;

True to his charge, the bard preserv'd her long

In honour's limits, such the power of song.

POPE'S Homer's Iliad, Book iii.

It is not, however, to be supposed, that mere lessons of *music* could be lessons of prudence and virtue: it must have been the *poetry*, in which the bard's instructions and precepts were conveyed, that kept the queen from infidelity, and not the sound of his lyre; though Pausanias in his *Attics*, calls him *αἰδοῦς ἀνὴρ*, a *singer*, and not a poet.

But if these accounts from Polybius and Homer were to be taken literally, they would prove the sensibility of the Greeks more than the excellence of their music, in such remote antiquity; for though all writers agree in saying that the Grecian lyre was at first furnished with only three or four *open* strings, and for many ages after had, at most, but seven or eight, by which small number of sounds the voice was wholly regulated and governed; yet the miraculous effects of music are thrown into these dark and fabulous times, when the art may be supposed to have been in its infancy; and the hearers at least as ignorant as the performers (b).

(b) From the heavy complaints made by Plato and Aristotle of the degeneracy of music in their time, from its *too great refinement*, we may suppose that its miraculous powers had then ceased.

But

But now, since gods and goddesses are humanized, and ancient heroes are reduced to the common standard of mankind, why, it may be asked, are we to retain only the marvellous stories concerning the *music* of those remote periods, when all the rest are given up?

I shall now consider under the *second head* what has been related by ancient authors, relative to the empire of music over the passions.

Plutarch, in his *Dialogue on Music*, tells us, that Terpander appeased a violent sedition among the Lacedæmonians by the assistance of music.

The same author, in his *Life of Solon*, relates, that this celebrated legislator, by singing an elegy of his own writing, consisting of a hundred verses, excited his countrymen, the Athenians, to a renewal of the war against the Megarians, which had been put an end to in a fit of despair, and which was forbidden to be mentioned on pain of death; but by the power of his song, they were so enflamed, that they never rested till they had taken Salamine, which was the object of the war. This circumstance is not only related by Plutarch, but by Diogenes Laertius, Pausanias, and Polyan.

Pythagoras, according to Boethius (c), seeing a young stranger enflamed with wine, in so violent a rage, that he was on the point of setting fire to the house of his mistress, for preferring his rival to him; and, moreover, animated by the sound of a flute playing to him in the Phrygian mode, had this young man restored to reason and tranquillity, by ordering the *tibicina*, or female performer on the flute, to change her mode, and play in a grave and soothing style, according to the measure usually given to the *spondee* (d). The same kind of story is recorded by Galen of Damon, the music-master of

(c) *Music*, lib. i. cap. i.

(d) This measure the French imagine to have been the same as that of the airs

known in their old serious operas by the name of *sommeils*, so proper to tranquilize, and excite drowsiness.

Socrates ; and Empedocles is, in like manner, said to have prevented murder by the sound of his lyre.

Plutarch relates of Antigenides, what others have given to Timotheus, that in playing a spirited air to Alexander, it so enflamed the courage of that prince, that he suddenly rose from table, and seized his arms.

The painter, Theon, who knew the virtue of this martial music, availed himself of its power ; for, according to Ælian (e), at an exhibition of a picture, in which he had represented a soldier ready to fall on the enemy, he first took the precaution of making a *tibicen* sound the charge ; and as soon as he saw the spectators sufficiently animated by this music, he uncovered his picture, which gained universal admiration.

Thucydides, as quoted by Aulus Gellius (f), says, when the Lacedæmonians went to battle, a *tibicen* played soft and soothing music to temper their courage, lest by an ardent temerity they should have rushed on with too great impetuosity ; for, in general, they had more need of having their courage repressed than excited.

However, in an engagement with the Messenians, they were very near being discomfited, when the celebrated Tyrtaeus, who performed the part of a *tibicen* that day, finding the troops give way, immediately quitted the Lydian mode, and played in the Phrygian, which so reanimated their courage, repressed by the preceding mode, that they obtained a complete victory (g).

Such are the wonderful effects upon the passions, which the ancient music is said to have produced. Now, without disputing the truth of the facts, let us enquire whether, in those early ages, it was necessary for the art to have been brought to great perfection, in order to operate so powerfully.

(e) Lib. ii. cap. 44.

(f) Lib. i. cap. 11.

(g) Patritius, lib. ii. cap. 22.

To begin with the sedition at Sparta, that Terpander was able to appease so opportunely; upon which I shall only observe, that it does not appear as if the lyre had had the principal share in the business; that instrument only serving as an accompaniment to the voice of the musician, who was likewise an excellent poet, and whose verses upon this occasion, it is most likely, were far more persuasive than his music. It has already been observed how much his melody and modulation must have been confined by the small compass of the lyre; and yet, however desirous Terpander might have been to extend its limits, he would hardly have been so imprudent as to expose himself a second time to the penalty which the ephori had before made him pay, for only adding a single string to his lyre (*h*).

As to the adventure of Solon with respect to Salamine, the favourable disposition in which he found the Athenian youth for war, and the persuasive strains of his elegy, the poetry of which was rendered interesting and pathetic, by every circumstance that could be urged upon such an occasion, contributed no less to his being favourably heard than the music. For *melody* at this time confined to few notes, could not be susceptible of great variety: and we may easily form an idea of the rhythm, as it must have been regulated by dactyls, spondees, and anapæsts, the only feet admissible in elegiac verse.

With respect to the power attributed to the flute, it lessens the marvellous very much, when we consider that, in the instances just given, this power was only exercised upon persons agitated by the fumes of wine; for, at present, it certainly would not be difficult to render a company of drunken fellows furious, by a bad hautbois, or tabor and pipe; but,

(*h*) The Spartans, though the first cultivators of music among the Greeks, were such enemies to *variations* in that art, that Terpander was not the only reformer and innovator who felt their resentment:

Phrynnis and Timotheus underwent a still severer punishment. And Plutarch speaks of a lyrist whom they heavily fined for playing with his fingers, instead of the *plectrum*, as their forefathers had done.

when

when the first rage has spent itself, if the hautbois were to play a graver strain, and retard the measure by degrees, we should soon see these pot-valiant heroes fall fast asleep, without reflecting any great honour upon the excellence of the music, or performance.

The flutes, therefore, that were used under the direction of Pythagoras and Damon cannot easily be regarded in a more wonderful light; any more than the lyre of Empedocles, which is said to have had the power of preventing murder; for all that can be inferred from what has been related of this poet and musician is, that he restored a furious young man to reason and moderation by the assistance of poetical counsel, conveyed to him in a song; for the chief use made of the lyre at that time, as before observed, was to accompany the voice.

With regard to the particular power of the flute of Timotheus, or of Antigenides, over Alexander, where is the wonder that a young and martial prince, extremely sensible to the charms of music, should suddenly rise from table upon hearing some military charge, or march sounded, and, seizing his arms, dance a Pyrrhic dance? Must a musician's abilities be very extraordinary, or the music miraculous, to operate such a natural effect?

A Thracian prince, mentioned by Xenophon, *lib. vii.* was roused in the same manner by the sound of flutes and trumpets, made of an ox's hide undressed, and is said to have danced with as much impetuosity and swiftness, as if he had tried to avoid a dart. But must we conclude from hence, that in the city Cerasontes, where it is said to have happened, music was arrived at a greater degree of perfection than elsewhere?

The trumpeter, Herodorus, of Megara, had the power, according to Athenæus, of animating the troops of Demetrius so much, by sounding two trumpets at a time, during the siege of Argos, as to enable them to move a machine towards the ramparts, which they had in vain attempted to do for several

veral days before, on account of its enormous weight. Now the whole miraculous part of this exploit may safely be construed into a *signal* given by the musician to the soldiers for working *in concert* at the battering ram, or other military engines; for want of which signal, in former attempts, their efforts had never been united, and consequently were ineffectual.

Nor can any thing be inferred very much in favour of either the music or musician, mentioned by Saxo Grammaticus (*i*), who, under the reign of Eric the second of Denmark, could work his hearers up to a fury at his pleasure: for it was in a dark and barbarous age, when music was extremely degenerated. However, imperfect as it was, its power over the passions seems to have been as great as in the days of Alexander. Giraldus assures us, that he saw the same effects produced at the court of Leo X. Music was then, indeed, a little emerged from barbarism, though very remote from its present degree of perfection.

All this only proves, that the best music of every age, be it ever so coarse and imperfect, has great power over the human affections, and is thought delightful, perfect, and inimitable: hence those hyperbolical praises at all times, and in all countries, concerning music, that becomes intolerable to persons of taste in future ages; and, perhaps, the more barbarous the age and the music, the more powerful its effects (*k*).

I shall now lay before my readers, under the *Third head*, the *Medicinal* powers that have been attributed to music by the ancients.

Martianus Capella (*l*) assures us, that fevers were removed by song, and that Asclepiades cured deafness by the sound of the trumpet. Wonderful, indeed! that the same noise which would occasion deafness in some, should be a specific for it in others! it is making the viper cure her own bite.

(*i*) *Lib. xii. p. 226.*

(*k*) "For still the less they understand,
The more they admire the flight of hand."

In the first ages of Greece, when music was a new art, and the hearers, un-

accustomed to excellence, gave way to their feelings, without asking their judgment leave to be pleased, its operations were most miraculous.

(*l*) *Lib. ix. De Musica.*

But

But perhaps Asclepiades was the inventor of the *Acousticon*, or ear-trumpet, which has been thought a modern discovery; or of the speaking-trumpet, which is a kind of cure for *distant* deafness. These would be admirable proofs of musical power (l)! We have the testimony of Plutarch (m), and several other ancient writers, that Thaletas the Cretan, delivered the Lacedæmonians from the pestilence by the sweetness of his lyre.

Xenocrates, as Martianus Capella further informs us, employed the sound of instruments in the cure of maniacs; and Apollonius Dyscolus (n), in his fabulous history, *Historia Commentitia*, tells us, from Theophrastus's *Treatise upon Enthusiasm*, that music is a sovereign remedy for a dejection of spirits, and a disordered mind; and that the sound of the Flute will cure an epilepsy, and a sciatic gout. Athenæus quotes the same passage from Theophrastus, with this additional circumstance, that as to the second of these disorders, to render the cure more certain, the Flute should play in the Phrygian mode (o). But Aulus Gellius, who mentions this remedy (p), seems to administer it in a very different manner, by prescribing to the Flute-player a soft and gentle strain; *si modulis lenibus*, says he, *tibicen incinat*: for the Phrygian mode was remarkably vehement and furious. This is what Cælius Aurelianus calls *loca dolentia decantare*, *enchanting the disordered places* (q). He even tells us how this enchantment is brought about upon these occasions, in saying that the pain is relieved by causing a vibration in the fibres of the afflicted part: *Quæ cum saltum sumerent palpitando, discussso dolore mitescerent*. Galen speaks seriously of playing the Flute on the suffering part, upon the

(l) It has been asserted by several moderns, that deaf people can hear best in a great noise; perhaps to prove, that Greek noise could do nothing which the modern cannot operate as effectually; and Dr. Willis, in particular, tells us of a lady who could hear only while a drum was beating, in so much that her husband, the

account says, hired a *Drummer* as her servant, in order to enjoy the pleasure of her conversation.

(m) *De Musica*.

(n) *Cap. xlix. De Musica*, p. 42.

(o) *Deipnos. lib. xiv. cap. 15*.

(p) *Lib. iv. cap. 13*.

(q) *Chron. lib. v. cap. 1. sect. 23*.

principle,

principle, I suppose, of a medicated vapour bath (*r*). The sound of the flute was likewise a specific for the bite of a viper, according to Theophrastus and Democritus, whose authority Aulus Gellius gives for his belief of the fact. But I find nothing more extraordinary among the virtues attributed to music by the ancients, than what Aristotle relates of its supposed power in softening the rigour of punishment. The Tyrrhenians, says he, never scourge their slaves, but by the sound of flutes, looking upon it as an instance of humanity to give some counterpoise to pain, and thinking, by such a diversion, to lessen the sum total of the punishment (*s*). To this account may be added a passage from Jul. Pollux (*t*), by which we learn, that in the *triremes*, or vessels of three banks of oars, there was always a *tibicen*, or flute-player, not only to mark the time, or cadence, for each stroke of the oar, but to soothe and cheer the rowers by the sweetness of the melody. And from this custom Quintilian took occasion to say, that music is the gift of nature, to enable us the more patiently to support toil and labour (*u*).

These are the principal passages which antiquity furnishes, relative to the medicinal effects of music; in considering which, I shall rely on the judgment of M. Burette, whose opinions will come with the more weight, as he had not only long made the music of the ancients his particular study, but was a physician by profession. This writer, in a Dissertation on the subject, has examined and discussed many of the stories above related, concerning the effects of music in the cure of diseases. He allows it to be possible, and even probable, that music, by reiterated strokes and vibrations given to the nerves, fibres,

(*r*) Many of the ancients speak of music as a recipe for every kind of malady; and it is probable that the Latin word *præcinere*, to charm away pain, *incantare* to enchant, and our word *incantation*, came from the medicinal use of song.

(*s*) It seems, by the lightness of the music, from a very different reason, that the Prussian soldiers are scourged to the sound of instruments at present.

(*t*) *Lib. iv. cap. 8.*

(*u*) *Instit. Orat. lib. i. cap. 10.*

and animal spirits, may be of use in the cure of certain diseases; yet he by no means supposes that the music of the ancients possessed this power in a greater degree than the modern, but rather, that a very coarse and vulgar music is as likely to operate effectually on such occasions as the most refined and perfect. The savages of America pretend to perform these cures by the noise and jargon of their imperfect instruments; and in Apulia, where the bite of the tarantula is pretended to be cured by music, which excites a desire to dance, it is by an ordinary tune, very coarsely performed (x).

Credulity must be very strong in those who can believe it possible for music to drive away the pestilence. Antiquity, however, as mentioned above, relates, that Thaletas, a famous lyric poet, cotemporary with Solon, was gifted with this power; but it is impossible to render the fact credible, without qualifying it by several circumstances omitted in the relation. In the first place it is certain, that this poet was received among the Lacedæmonians during the plague, by command of an oracle: that by virtue of this mission, all the poetry of the hymns which he sung, must have consisted of prayers and supplications, in order to avert the anger of the Gods against the people, whom he exhorted to sacrifices, expiations, purifications, and many other acts of devotion; which however superstitious, could not fail to agitate the minds of the multitude, and to produce nearly the same effects as public fasts, and, in catholic countries, processions, at present, in times of danger, by exalting the courage, and by animating hope.

The disease having, probably, reached its highest pitch of malignity when the musician arrived, must afterwards have become less contagious by degrees; till, at length, ceasing of

(x) M. Burette, with our Dr. Mead, Baglivi, and all the learned, of their time, throughout Europe, seem to have entertained no doubt of this fact, which,

however, philosophical and curious enquirers, have since found to be built upon fraud and fallacy. See Serrao, *della Tarantola o vero Falangio di Puglia*.

itself,

itself, by the air wafting away the seeds of infection, and recovering its former purity, the extirpation of the disease was attributed by the people to the music of Thaletas, who had been thought the sole mediator, to whom they owed their happy deliverance.

This is exactly what Plutarch means, who tells the story; and what Homer meant, in attributing the cessation of the plague among the Greeks, at the siege of Troy, to music.

With hymns divine the joyous banquet ends,
The Pœans lengthen'd till the sun descends :
The Greeks restor'd, the grateful notes prolong ;
Apollo listens, and approves the song.

POPE'S Homer's Iliad, Book I.

For the poet, in this passage, seems only to say, that Apollo was rendered favourable, and had delivered the Greeks from the scourge with which they were attacked, in consequence of Chriseis having been restored to her father, and of sacrifices and offerings.

M. Burette thinks it easy to conceive, that music may be really efficacious in relieving, if not removing, the pains of the sciatica; and that, independent of the greater or less skill of the musician. He supposes this may be effected in two different ways: first, by flattering the ear, and diverting the attention; and, secondly, by occasioning oscillations and vibrations of the nerves, which may, perhaps, give motion to the humours, and remove the obstructions which occasion this disorder. In this manner the action of musical sounds upon the fibres of the brain, and animal spirits, may sometimes soften and alleviate the sufferings of epileptics and lunatics, and even calm the most violent fits of these two cruel disorders. And if antiquity affords examples of this power, we can oppose to them some of the same kind said to have been effected by music, not of the most exquisite sort. For, not only M.

Burette, but many modern philosophers, physicians, and anatomists, as well as ancient poets and historians, have believed, that music has the power of affecting, not only the mind, but the nervous system, in such a manner, as will give a temporary relief in certain diseases, and, at length, even operate a radical cure.

In the Memoires of the Academy of Sciences for 1707, and 1708, we meet with many accounts of diseases, which, after having resisted and baffled all the most efficacious remedies in common use, had, at length, given way to the soft impressions of harmony.

M. de Mairan, in the Memoires of the same academy, 1737, reasons upon the medicinal powers of music in the following manner. "It is from the mechanical and involuntary connexion between the organ of hearing, and the consonances excited in the outward air, joined to the rapid communication of the vibrations of this organ to the whole nervous system, that we owe the cure of spasmodic disorders, and of fevers attended with a delirium and convulsions, of which our Memoires furnish many examples."

The learned Dr. Bianchini, professor of physic at Udine, has lately collected all the passages preserved in ancient authors, relative to the medicinal application of music by Asclepiades; and it appears from this work (y), that it was used as a remedy by the ancient Egyptians, Hebrews, Greeks, and Romans, not only in acute, but chronical disorders. And this writer gives several cases within his own knowledge, in which music has been efficacious; but the consideration, as well as the honour, of these, more properly belong to *modern* music, than to the ancient.

And now, after an examination of the power attributed to ancient music over the human species, in *softening the manners*,

(y) *La Medicina d'Asclepiade per ben curare malattie acute.* Ven.

governing the passions, and healing diseases, this section might be considerably swelled, by accounts of its influence over the *brute creation*. But I shall wave the discussion of these, as some of them belong to poetic fables, moral allegories, and mythological mysteries; and others are too puerile and trivial to merit attention, unless among *stories to be laughed at*.

Indeed, with respect to this boasted influence of music upon animals, though not only antiquity, but several eminent and philosophical modern writers seem to have entertained no doubt of it, yet the articles of my creed, upon this subject, are but very few. Even *birds*, so fond of their own music, are no more charmed and inspired by ours, than by the most dissonant noise; for I have long observed that the sound of a voice, or instrument of the most exquisite kind, has no other effect upon a bird in a cage, than to make him almost burst himself in envious efforts to surpass it in loudness; and that the stroke of a hammer upon the wainscot, or a fire shovel, excites the same rival spirit. A singing bird is as unwilling to listen to others, as a loquacious disputant.

As to quadrupeds, it is by no means certain, that music affects them naturally with any thing but surprise and terror. A dog and cat, not accustomed to hear music, will howl, when an instrument is touched in the same room with them, as if the sound were too much for their nerves to bear. Some have, indeed, construed this effect into ecstatic pleasure; but, open the door, and they will run away from the music, as hastily as from a whip and a bell. By education and discipline several animals have indeed been taught to attend to it: the sound of a trumpet will rouse a horse (z); and a pack of hounds will obey orders issued through a French horn.

But if the truth of every strange story related by Ælian, Pliny, and other authors, concerning the great sensibility of all kinds of animals for ancient music, could be ascertained, the

(z) *Fremat equus quum signa dedit tubicen.* OVID.

power it had over them would by no means prove its superiour excellence. Indeed, if it should be granted that any supernatural effects upon *man* were ever produced in former times by mere *practical music*, it would be so far from proving its *superiority* to the modern, that it seems to demonstrate the direct contrary. For, at present, it is not the most refined and uncommon melody, sung in the most exquisite manner, or the most artificial and complicated harmony, which has the greatest power over the passions of the multitude: on the contrary, the most simple music, sung to the most intelligible words, applied to a favourite and popular subject, in which the whole audience can occasionally join, will be more likely to rouse and transport them, than the most delicate or learned performance in an opera, or oratorio.

But in proportion as an age, or nation, grows refined, and accustomed to musical excellence, it becomes more difficult to please. The dose of any medicine must be doubled, if frequently taken; an opiate, or cathartic, that would cause eternal sleep, or the most violent convulsions, if administered to a patient at first in a large quantity, would become mild and anodyne by use, and a gradual encrease of the quantity. The nearer the people of any country are to a state of nature, the fonder they are of noisy music, like children, who prefer a rattle and a drum to a soft and refined melody, or the artful combinations of learned harmony.

It is not, therefore, difficult to conceive, that the music of the ancients, with all its simplicity, by its strict union with poetry, which it rendered more articulate and intelligible, could operate more powerfully in theatric, and other public exhibitions, than the artificial melody, and complicated harmony of modern times; for though poetry was assisted by ancient music, it is certainly injured by the modern.

And here I can believe great effects to have arisen from little causes. However, many hyperbolical accounts of its supernatural

tural powers, that have been handed down from age to age, are not only too improbable for belief, but too ridiculous to be treated seriously.

Poetical fables, and ingenious allegories, come not under this class. Amphion building the walls of Thebes with the sound of his lyre, may be solved into the sweetness of his poetical numbers, and the wisdom of his counsel prevailing upon a rude and barbarous people to submit to law and order, to live in society, and to defend themselves from the insults of savage neighbours, by building a wall round their town.

It is not quite so easy to unfold the mysteries of *singing swans*, or *intelligent grasshoppers*. However, the chevalier de Jaucourt tells us *seriously*, that "the swan, whose sweet song is so celebrated by the poets, does not produce the sounds by his *voice*, which is very coarse and disagreeable; but by his *wings*, which, being raised and extended when he sings, are played upon by the winds, like the Æolian harp, which produce a sound so much the more agreeable, as it is not monotonous, which is the case in the warble of most other birds; but, on the contrary, this sound is continually changing, being composed of many different tones, which form a kind of harmony, in proportion as the wind happens to fall on different parts of the wings, and in different positions (a)." But who ever heard this harmony? and why was it more remarkable and melodious in the *dying swans* of antiquity, than in those of youth and vigour?

The story of a grasshopper supplying the place of a broken string in the musical contest between Eunomes and Ariston, at the Pythian games, is gravely related by Strabo, Diodorus Siculus, Pliny, and Pausanias. The first of these authors gives a very plausible reason for one particular breed of grasshoppers singing better than another, though not for the sagacity of

(a) *Encyc. Art. Voix.*

the individual insect in question. He says, that though the two cities of Rhegium and Locris were only separated by the river Alex, the grasshoppers sung on the side of Locris, and were utterly mute on that of Rhegium: for at Rhegium, the country being moist and woody, the insect is languid and dull; whereas on the Locrian side, which is dry and open, the grasshoppers are more lively, and fond of singing.

The dolphins seem, at all times, to have had a great attachment to human kind (*b*), but particularly to poets and musicians. I shall give the celebrated story of Arion from Herodotus, in the words of his translator.

“ Periander, the son of Cypselus, was king of Corinth; and the Corinthians say, that a most astonishing thing happened there in his time, which is also confirmed by the Lesbians. Those people give out, that Arion of Methymna, who was second to none of his time in playing on the harp, and first inventor of dithyrambics, both name and thing, which he taught at Corinth, was brought by a dolphin to Tænarus; and thus they tell the story: Arion having continued long with Periander, resolved to make a voyage to Italy and Sicily, where, when he had acquired great riches, determining to return to Corinth, he went to Tarentum, and hired a ship of certain Corinthians, because he put more confidence in them than in any other nation. But these men, when they were in their passage, conspired together to throw him into the sea, that they might get his money: which he no sooner understood, than offering them all his treasure, he only begged they would spare his life. But the seamen being inflexible, commanded him either to kill himself, that he might be buried ashore, or to leap immediately into the sea. Arion seeing himself reduced to this hard choice, most earnestly desired that, having determined on his

(*b*) Pliny, *lib. ix. cap. 8*, tells us of a dolphin that became so fond of a child, by whom he had been regaled with some crumbs of bread, and the sweet name of

Simon, that he carried him every day, during several years, across the sea, to school, from Baii to Puzzuoli, and back again.

death,

death, they would permit him to dress in his richest apparel, and to sing, standing on the side of the ship, promising to kill himself when he had done. The seamen, highly pleased that they should hear a song from the best singer in the world, granted his request, and went from the stern to the middle of the vessel. In the mean time, Arion having put on all his robes, took up his harp, and began an Orthian ode, which, when he had finished, he leapt into the sea as he was dressed, and the Corinthians continued their voyage homeward. They say a dolphin received him on his back, from the ship, and carried him to Tænarus; where he went ashore, and thence proceeded to Corinth, without changing his cloaths; that upon his arrival there, he told what had happened to him; but that Periander giving no credit to his relation, put him under a close confinement, and took especial care to find out the seamen: that when they were found, and brought before him, he enquired of them concerning Arion; and they answering, that they had left him with great riches at Tarentum, and that he was undoubtedly safe in some port of Italy, Arion in that instant appeared before them in the very dress he had on when he leaped into the sea; at which they were so astonished, that having nothing to say for themselves, they confessed the fact. These things are reported by the Corinthians and Lesbians; in confirmation of which, a statue of Arion, made of brass, and of a moderate size, representing a man sitting upon a dolphin, is seen at Tænarus (c)."

Plutarch, in his Banquet of the seven Wise Men, puts a ridiculous account of the death of Hesiod into the mouth of Solon, who, after telling us that the poet was killed at the Nemean temple at Locris, seriously assures us that his body being cast into the sea, was instantly caught up by a shoal of dolphins, and carried to Rhium, and Molycrium, where it was soon recognized, and buried, by the inhabitants in the temple of Nemean Jove.

(c) Littlebury's *Herodot.* vol. i. p. 13.

All these stories, and many more, have frequently been quoted in favour of ancient music; yet to realize or demonstrate its excellence now, seems out of the power even of those who have spent the greatest part of their lives in the study of it. Meibomius, the great and learned Meibomius, when prevailed on at Stockholm to sing *Greek Strophes*, set the whole court of Christina in a roar, as Naudé did in executing a Roman dance (*f*); but who would venture to appear at court now, in a dress that was worn a thousand years ago? Yet men delight in the marvellous; and many bigoted admirers of antiquity, forgetting that most of the extraordinary effects attributed to the music of the ancients had their origin in poetical inventions, and mythological allegories, have given way to credulity so far as to believe, or pretend to believe, these fabulous accounts, in order to play them off against modern music; which, according to them, must remain in a state far inferior to the ancient, till it can operate all the effects that have been attributed to the music of Orpheus, Amphion, and such wonder-working bards.

(*f*) *Vie de Christine, Reine de Suède.*

GENERAL HISTORY

O F

M U S I C.

HARMONY seems a part of nature, as much as light or heat; and to number any one of them among human inventions would be equally absurd. Indeed, nature seems to have furnished human industry with the principles of all science: for what is *geometry*, but the study and imitation of those proportions, by which the world is governed? *Astronomy*, but reflecting upon, and calculating the motion, distances, and magnitude, of those visible, but wonderful objects, which nature has placed before our eyes? *Theology*, but contemplating the works of the Creator, and adoring him in his attributes? *Medicine*, but the study of nature, or the discovery and use of what inferior beings instinctively find, in every wood and field through which they range, when the animal œconomy is disturbed by accident, or intemperance?

The ancients, by experiments on a single string, or monochord, found out the relations and proportions of one sound to another; but the moderns have lately discovered that nature, in every sounding body, has arranged and settled all these proportions in such a manner, that a single sound appears to be

composed of the most perfect harmonies, as a single ray of light is of the most beautiful colours; and when two concordant sounds are produced in just proportion, nature gives a third, which is their true and fundamental base (*a*).

This is only speaking of *natural* harmony, and the science of harmonical proportion: but even the *art* or *practice* of music cannot be said to have been *invented* by any one man, for that must have had its infancy, childhood, and youth, before it arrived at maturity (*b*).

I shall not, therefore, amuse my readers with puerile accounts of the *invention* of music; as I believe it may be asserted with truth, that no one man was the *inventor* of any *art*, *science*, or complicated piece of mechanism, without some *præcognita*, some leading principles, or assistance from others.

Among the ancient Greeks, says Pausanias, rude and shapeless stones held the place of statues, and received divine honours. A stone was adored in Bæotia for Hercules; at Thebes, for Bacchus: and Herodian pretends, that the image, or symbol, of the Venus of Paphos, was at first only a stone, in form of a land-mark, or pyramid.

The first house was, doubtless, a cavern, or a *hollow tree*; and the first picture, a shadow; even temples at first were so small, that the Gods could hardly stand upright in them:

Jupiter angusta vix totus stabat in æde (*c*).

OVID, Fast. lib. i.

and yet it has been thought necessary, in histories of architecture and of painting, to tell us who were the *inventors* of those arts.

(*a*) This will be explained hereafter.

(*b*) *Omnium rerum principia parvum sunt, sed suis progressionibus usu augentur.*
Cic. de Fin. bon. et mal.

(*c*) No sumptuous temples are upon record, till the days of Solomon: new king-

doms then began to build sepulchres to their founders, in a magnificent manner: such were constructed by Hiram in Tyre, Sefac in all Egypt, and Benhadad in Damascus. *Newton's Chron.*

As in these, so in music, the first attempts must have been rude and artless: the first flute, a *whistling reed* (*d*), and the first lyre, perhaps, the *dried sinews* of a dead tortoise. However, particular persons have been mentioned as the inventors of such clumsy instruments as were made by nature, and found by chance; and yet, notwithstanding the little probability there is that music could have been brought to perfection by those who first attempted it, we are told by the ancient poets, historians, and even philosophers, that the miraculous powers of this art were exercised with the greatest success by its first cultivators.

Who these first cultivators were, and what region of the earth they inhabited, it is not easy to determine. According to Herodotus (*e*), it was long disputed by the Egyptians and Phrygians, which of them could boast the higher antiquity; and we are told by the same writer, that it was put to a very weak and precarious issue, which turned out favourable to the Phrygians (*f*). But as all the most ancient historians speak of the stupendous and splendid remains of grandeur and civilization to be found in Egypt, at a time when Phrygia could produce no such vouchers; and as Sanconiatho, the most ancient historian of the Phoenicians, a people, who have a just claim to a very high antiquity, confesses (*g*) his cosmogony to have been taken from that of Taautus, who was the same with the Egyptian Thoth, or Hermes; I shall not enter upon a minute discussion of the point, but proceed immediately to the history of music in that country, of which the most indisputable proofs and testimonies remain of the extreme high antiquity, of its religion, government, arts, and civil policy.

(*d*) *Et zephyris cava per calamorum sibilum*
Agresteis docuere cava inflare cicutas.

(*e*) Euterpe.

(*f*) In order to make the experiment, Psammetichus, king of Egypt, ordered two

children, just born, to be shut up in a cottage with dumb nurses; and these children, as they grew up, were always heard, when hungry, to pronounce the word *bekkos*, which, upon enquiry, was found to be the Phrygian name for bread.

(*g*) *Apud Euseb. de Præp. Ev. l. f. c. 10.*

THE
HISTORY
OF
EGYPTIAN MUSIC.

THAT Egypt was one of the first countries on the globe which cultivated arts and sciences, is certain, from the testimony of the most ancient and respectable historians. Indeed, we have no authentic accounts of any nation upon the earth, where a regular government was established, civilization advanced, the different orders and ranks of the people settled, property ascertained, and the whole regulated by long custom and by laws, founded upon wisdom and experience, in such high antiquity as in Egypt.

For all this, we have the testimony of the Jewish legislator and historian, Moses, who allows the Egyptians to have been a powerful and polished people, before the arrival of Jacob's single family among them, consisting of only seventy persons, in order to obtain corn, during the time of a great famine, which raged throughout Syria (*f*). And even much earlier, Abram was obliged to visit that country upon a similar occasion (*g*), where he found the state settled under a *king*, the second of whom mention is made in the sacred writings, and who had ideas of justice and rectitude, and treated him with hospitality and kindness.

(*f*) Gen. xlv. 6, 27.

(*g*) Gen. xii. 10.

That

That architecture was known here in a grand and magnificent style, much earlier than in other parts of the known world, is certain, from the wonderful remains of it still subsisting in the pyramids, and of which the antiquity was so remote in the days of Herodotus, the oldest historian of Greece, that he could neither discover the time of their construction, nor procure an explanation of the hieroglyphics they contained, though he travelled through that country expressly in search of historical information.

To the Egyptians has been assigned the invention of geometry, an art necessary for measuring and ascertaining the portions of land belonging to each individual, after the overflowing of the Nile, by which all boundaries were obliterated. Now as it is allowed by all antiquity that Pythagoras travelled into Egypt, and was obliged to the priests of that country for the chief part of his science, particularly that of music (*h*), it is natural to suppose that the doctrine of harmonics, or the geometrical mensuration of sounds, and the laws of their proportions to each other, were the invention of these early geometricians, who had brought the science of calculation to great perfection, long before the arrival of the Samian sage among them.

It is in vain, therefore, to endeavour to trace music from a higher source than the history of Egypt; a country, in which all human intelligence seems to have sprung. Its ancient inhabitants boasted a much higher antiquity than those of any other country, or, indeed, than has ever been granted them by any modern system of chronology; for from the time of Osiris to Alexander the Great, they counted ten thousand years. However, there are no annals of their history, or computations of time, which do not allow them an extreme high antiquity: those who strictly adhere to the Hebrew chronology are obliged to it, for the reasons assigned above; and the fol-

(*h*) See Diog. Laert.

lowers of other systems can find no transactions concerning any other countries, prior to those recorded of the Egyptians; for they were a great people long before the use of letters was known, till which period, they had no other memorials of times past than hieroglyphics, which being, at first, vague and fanciful, must soon have grown out of use and unintelligible, when the more simple, certain, and expeditious method of conveying their transactions and thoughts to distant places and times, was agreed on, by writing.

With respect to music, I know it is asserted by Diodorus Siculus (*i*), "that the cultivation of it was prohibited among them; for they looked upon it not only as useless, but noxious, being persuaded that it rendered the minds of men effeminate." To this passage has been opposed one from Plato, by a writer, who has well discussed the point (*k*); and as Plato travelled into Egypt, with a view of getting acquainted with the arts and sciences that flourished there (*l*), and was particularly attached to music; it is natural to suppose that his enquiries would be judicious, and his account of it accurate. The following quotation from him will, therefore, have the more weight.

"*Athen.* The plan which we have been laying down for the education of youth, was known long ago to the Egyptians, viz. that nothing but beautiful forms, and fine music, should be permitted to enter into the assemblies of young people. Having settled what those forms, and that music should be, they exhibited them in their temples; nor was it allowable for painters, or other imitative artists, to innovate, or invent, any forms different from what were established; nor is it now lawful, either in painting, statuary, or any of the branches of music, to make any alteration. Upon examining, therefore, you will find, that the pictures and statues made ten thousand

(*i*) *Lib. i.*

(*k*) Mr. Stillingfleet, in *Principles and Power of Harmony*, p. 123.

(*l*) According to Strabo, he remained in that country thirteen years.

years ago, are, in no one particular, better or worse than what they make now. *Clin.* What you say is wonderful. *Athen.* Yes, it is in the true spirit of legislation and policy. Other things practised among that people may, perhaps, be blameable; but what they ordained about music is right; and it deserves consideration, that they were able to make laws about things of this kind, firmly establishing such melody as was fitted to rectify the perverseness of nature. This must have been the work of the Deity, or of some divine man; as, in fact, they say in Egypt, that the music which has been so long preserved, was composed by Isis, and the poetry likewise." *Plato*, p. 789.

This testimony of Plato contains a sufficient answer to Diodorus; but one still more full may be extracted from his own writings, as, in this particular, he is in contradiction with himself; for he not only tells us that music, and musical instruments, were invented by the Egyptian deities, Osiris, Isis, Orus, and Hermes; but that Orpheus had from Egypt the fable of his descent into hell, and the power of music over the infernals; and enumerates all the great poets and musicians of Greece who had visited that country, in order to improve themselves in the arts. Herodotus too, who travelled into Egypt more than three hundred years before Diodorus, and a hundred before Plato, is so far from mentioning any prohibition against the practice of music there, that he gives several instances of its use in their festivals, and religious ceremonies.

"The Egyptians, says he (*m*), were the first inventors of festivals, ceremonies, and transactions with the gods, by the mediation of others. It is not thought sufficient in Egypt, continues this father of history, to celebrate the festivals of the gods once every year; but they have many times appointed to that end: particularly in the city of *Bubastis*, where they as-

(*m*) *Euterpe*.

semble to worship Diana, with great devotion. The manner observed in these festivals at Bubastis, is this : men and women embark promiscuously, in great numbers ; and, during the voyage, some of the women beat upon a tabor, while part of the men play on the pipe ; the rest, of both sexes, singing, and clapping their hands together at the same time. At every city they find in their passage, they hawl in the vessel, and some of the women continue their music."

In the same book, he tells us, that in the processions of Osiris or Bacchus, the Egyptian women carry the images, *singing* the praises of the god, and *preceded by a flute*. And afterwards, in speaking of funeral ceremonies, he has the following remarkable passage. " Among other memorable customs, the Egyptians sing the song of Linus, like that which is sung by the Phœnicians, Cyprians, and other nations, who vary the name, according to the different languages they speak. But the person they honour in this song, is evidently the same that the Grecians celebrate : and as I confess my surprize at many things I found among the Egyptians, so I more particularly wonder whence they had this knowledge of Linus, because they seem to have celebrated him from time immemorial. The Egyptians call him by the name of *Maneros*, and say he was the only son of the first of their kings, but dying an untimely death, in the flower of his age, he is lamented by the Egyptians in this mourning song, which is the only composition of the kind used in Egypt."

Strabo (*n*) says, that the children of the Egyptians were taught letters, the songs appointed by law, and a certain species of music established by government, exclusive of all others.

Indeed the Greeks, who lost no merit by neglecting to claim it, unanimously confess, that most of the ancient musical instruments were of Egyptian invention : as the triangular lyre, the monaulos, or single flute ; the tymbal, or kettle-drum ; and the

(*n*) B. G. 1.

fistrum,

fistrum, an instrument of sacrifice, which was so multiplied by the priests in religious ceremonies, and in such great favour with the Egyptians in general, that Egypt was often called, in derision, the *country of fistrums*; as Greece has been said to be governed by the lyre.

Herodotus (o), in tracing the genealogy of the Dorians, one of the most ancient people of Greece, makes them natives of Egypt: and as the three musical modes of highest antiquity among the Greeks, are the Dorian, Phrygian, and Lydian, it is likely that the Egyptian colony, which peopled the Dorian province, brought with them the music and instruments of their native country. The profession of music was hereditary among the Egyptians, as was the case with every other profession. This custom was imitated by the Hebrews; and Herodotus (p) tells us, that the Lacedæmonians, who were Dorians, agreed with their progenitors, the Egyptians, in this, that their musicians were all of one family. Their priests too, like those of Egypt, were at once taught medicine, to play on stringed instruments, and initiated into religious mysteries.

The prohibition, therefore, mentioned by that excellent and judicious writer, Diodorus Siculus, inconsistent as it may seem with what he elsewhere says of the music and musicians of Egypt, may be accounted for, by the study of music, in very ancient times, having been confined there to the priesthood, who used it only on religious and solemn occasions. And as we are told by Plato, that not only the music, but the sculpture of the Egyptians, was circumscribed by law, and continued invariable for many ages, which accounts for the little progress they made in both, it seems as if, during the time that arts were thus rendered stationary, only *new* music was prohibited; and that the old was sacred, and so connected with religion, that it was, perhaps, forbidden to be used on light and common occasions.

(o) Erato.

(p) Ibid.

D d 2

But

But the Egyptians are mentioned by all writers, as if their government, customs, religion, laws, and arts, had remained the same through all the revolutions of time, and vicissitude of things. Yet it should be remembered that they became subjects of different invaders at different periods, who must have greatly changed, not only the form of their government, but their manners and amusements: they were, by turns, after the reign of the Pharaohs, conquered by the Ethiopians, Persians, Greeks, and Romans. In the time of the Ptolemies, it seems as if nothing but Greek literature, arts, and sciences, were cultivated among them; and the musical games and contests instituted by those monarchs, were all of Greek origin, and chiefly supplied by Greek musicians.

However, a sufficient number of passages have been cited from ancient authors, to evince the use of music, at all times, in Egypt; and there still remain, both at Rome, and at Thebes, in Upper Egypt, such proofs of its high antiquity, as appear to be wholly incontestable.

There are no memorials of human art and industry, at present subsisting in Rome, of equal antiquity with the obelisks, that have been brought thither from Egypt; two of them, in particular, are supposed to have been erected at Heliopolis, by Sesostris, near four hundred years before the Trojan war (q). These Augustus, after reducing Egypt to a Roman province, caused to be brought to Rome. One of them he placed in the great Circus, and the other in the *Campus Martius*; this last, the largest of all those that have been transported from Egypt to Rome, was thrown down and broken, during the sacking and burning of that city by the constable duke of Bourbon, general to the emperor Charles V. 1527, and still lies in the *Campus Martius*. This column is known at Rome by the name of the *guglia rotta*, or broken pillar. Upon this, among

other

Fig. VII.

AN EGYPTIAN MUSICAL INSTRUMENT, the
the Campus Na

other hieroglyphics, is represented a musical instrument of two strings with a neck to it (*r*), much resembling the *Calascione*, which is still in common use throughout the kingdom of Naples. The drawing of this instrument, which was made under my own eye, is of the exact size of the figure or hieroglyphic on the Obelisk, which is the most ancient piece of sculpture at Rome (*s*).

This instrument seems to merit a particular description here, not only from its great antiquity, but from its form; for by having been furnished with a neck, though it had but two strings, it was capable of producing from them a great number of notes; for instance, if these two strings were tuned fourths to each other, they would furnish that series of sounds which the ancients called a heptachord, consisting of two *conjunct tetrachords*, as B, c, d, e; E, f, g, a; and if the strings of this instrument, like those on the *Calascione*, were tuned fifths, they would produce an octave, or two *disjunct tetrachords*; an advantage which none of the Grecian instruments seem to have possessed for many ages after this column was erected. Indeed I have never yet been able to discover in any remains of Greek sculpture, an instrument furnished with a neck; and father Montfaucon says, that in examining the representations of near five hundred ancient lyres, harps, and eitharas, he never met with one in which there was any contrivance for shortening strings, during the time of performance, as by a neck and finger-board.

This instrument, therefore, is not only a proof that music was cultivated by the Egyptians in the most remote antiquity,

(*r*) See pl. vii.

(*s*) Figures of musical instruments have been found upon the Isiac table, particularly the *harp* and *sistrum*; but this obelisk is a monument of far more certain antiquity than the table of Isis, which has been supposed by the learned Jablonski, to be a calendar of Egyptian festivals, fabricated at Rome for the use of the Egyp-

tians established there, during the time of the emperor Caracalla, in imitation of the figures and workmanship of Egypt. The *Compte de Caylus*, however, thinks that it certainly was engraved in Egypt, and brought into Italy about the end of the Republic, when the worship of Isis was first introduced there. *Recueil d'Antiquités*, 1767. tom. vii. p. 37.

but:

but that they had discovered the means of extending their scale, and multiplying the sounds of a few strings, by the most simple and commodious expedients.

Proclus tells us (*t*), "That the Egyptians recorded all singular events, and *new inventions*, upon columns, or stone pillars." Now if this be true, as the *guglia*, or great obelisk, is said to have been first erected at Heliopolis, in the time of Sesostris, it will in some measure fix the period when this *dichord*, or two-stringed instrument, was invented.

An exact chronology, however, in transactions of such remote ages, can hardly be expected. Sir Isaac Newton, whom I shall frequently follow, has more opponents to his Egyptian Chronology, than to any of his other writings. The bishop of Gloucester has attacked him with all his powers of learning and argument: it is not my business to enlist, on either side, in so learned and hopeless a dispute, in which both parties have the authority of ancient writers to confirm their opinions (*u*).

Sir Isaac Newton supposes the elder Bacchus, Osiris, Sefac, and Sesostris, to be one and the same person (*x*): the bishop of Gloucester, on the contrary, denies their identity, especially that of Osiris and Sesostris, whom he makes totally different persons, and to have flourished at very different periods. To Osiris he gives the character of legislator, inventor of arts, and civilizer of a rude and barbarous people; and to Sesostris that of a conqueror who carried those arts and that civilization into remote countries (*y*): and Osiris, whom Sir Isaac Newton places but 956 years before Christ, the bishop makes cotemporary with Moses, and seven hundred years higher than Sefac or Sesostris, the cotemporaries of Solomon and Jeroboam.

(*t*) In *Timæum*, lib. i.

(*u*) When respectable authors differ very widely in fixing the periods of time in which any of the personages I have occasion to mention, lived, I shall give the several dates of these writers for my read-

ers to please themselves by chusing among them that which they may think the most probable.

(*x*) *Chronol. of Ancient Kingdoms*, p. 193.

(*y*) *Div. Leg.* b. iv. sect. v.

The Egyptian mythology, as well as the Grecian, is so much connected with the first attempts at music, and so many of the Pagan divinities have been said to be its first cultivators, that some slight mention of them is unavoidable.

The sun, moon, and stars seem to have struck all mankind with wonder, awe, and reverence; and to have impressed them with the first idea of religious veneration. To the adoration of these succeeded hero-worship, in the deification of dead kings and legislators. This was the course of idolatry every where, as well as in Egypt: indeed the inhabitants of this country seem, from their early civilization, conquests, and power, to have spread their religious principles over the whole habitable earth; as it is easy to trace all the Pagan mythology of other countries, in the first ages of the world of which we have any account, from Egypt; and Isis and Osiris may be proved to have been the prototypes of almost every other god and goddess of antiquity. For the *moon*, or luna, under the name of *Isis*, means all the most ancient female divinities of Paganism; as the *sun*, under that of *Osiris*, does the male. Diodorus Siculus confesses, that there was ever a great confusion of sentiments concerning Isis and Osiris. The former is called Ceres, Thermophora, or Juno, Hecate, Proserpine, and Luna; Osiris has been likewise called Serapis, Dionysius, Helios, Pluto, Ammon, Jupiter, and Pan.

However, the history of these does not so immediately concern the present enquiries, as that of Mercury or Hermes, one of the *secondary gods* of Egypt, who received divine honours on account of his useful and extraordinary talents (z). This God must therefore be taken out of his niche, and examined.

(z) By *secondary divinities* is here meant such princes, heroes, and legislators as were deified after death for the benefits they had conferred on mankind when living, in distinction to the *heavenly luminaries*, or sun, moon, and stars, which were the first divinities of paganism.

There

There is no personage in all antiquity more renowned than the Egyptian Mercury, who was surnamed Trismegistus, or *thrice illustrious*. He was the soul of Osiris's counsel and government, and is called by sir Isaac Newton, his secretary; "Osiris," says he, "using the advice of his secretary Thoth, distributes Egypt into thirty-six *nomes* (a); and in every *nome* erects a temple, and appoints the several gods, festivals, and religions of the several *nomes*. The temples were the sepulchres of his great men, where they were to be buried and worshipped after death, each in his own temple, with ceremonies and festivals appointed by him; while he and his queen, by the names of Osiris and Isis, were to be worshipped in all Egypt; these were the temples seen and described by Lucian, who was himself an Egyptian, eleven hundred years after, and to be of one and the same age: this was the original of the several *nomes* of Egypt, and of the several gods and several religions of those *nomes* (b)." And Diodorus Siculus tells us, that Mercury was honoured by Osiris, and afterwards worshipped by the Egyptians, as a person endowed with extraordinary talents for every thing that was conducive to the good of society. He was the first who out of the coarse and rude dialects of his time formed a regular language, and gave appellatives to the most useful things: he likewise invented the first characters or letters, and even regulated the harmony of words and phrases: he instituted several rights and ceremonies relative to the worship of the gods, and communicated to mankind the first principles of astronomy. He afterwards suggested to them, as amusements, wrestling, and dancing, and invented the lyre, to which he gave three strings, in allusion to the seasons of the year: for these three strings producing three different sounds, the grave, the mean, and the acute, the grave

(a) Districts, or provinces.

(b) *Chronology of Ancient Kingdoms*, p. 22.

answered

answered to winter, the mean to spring, and the acute to summer (c).

Among the various opinions of the several ancient writers who have mentioned this circumstance, and confined the invention to the Egyptian Mercury, that of Apollodorus is the most intelligible and probable. "The Nile, says this writer (d), after having overflowed the whole country of Egypt, when it returned within its natural bounds, left on the shore a great number of dead animals of various kinds, and among the rest a tortoise, the flesh of which being dried and wasted by the sun, nothing was left within the shell, but nerves and cartilages, and these being braced and contracted by desiccation, were rendered sonorous; Mercury, in walking along the banks of the Nile, happening to strike his foot against the shell of this tortoise, was so pleased with the sound it produced, that it suggested to him the first idea of a lyre, which he afterwards constructed in the form of a tortoise, and strung it with the dried sinews of dead animals."

It is generally imagined that there were two Thothes, or Mercuries, in Egypt, who lived at very remote periods, but both persons of great abilities (e). From the small number of strings

(c) Not only the Egyptians, but the ancient Greeks, divided their year into no more than three seasons, spring, summer, and winter, which were called *ἡμέραι*, or hours; Hesiod speaks of no more:

The Hours to Jove, did lovely Themis bear,
Eunomia, Dice, and Irene fair;
O'er human labours, they the pow'r possess,
With seasons kind, the fruits of earth to bless.

Theogony.

However, *Ὅρως*, *Autumnus*, occurs in Xenophon; and M. de Boze has described in the *Mem. de Litterature*, an ancient marble monument found among the ruins near Athens, upon which the four seasons of the year are represented in sculpture. Indeed, according to Tacitus, "the ancient Germans knew all the seasons of the year, except autumn, of which they had no idea."

VOL. I.

Hiems, et ver, et æstas intellectum ac vocabula habent: autumnus perinde nomen ac bona ignorantur. De Morib. German. cap. xxvi.

(d) *Lib. ii.*

(e) The Egyptians themselves distinguish two Thothes, or Hermeses; and yet the histories of the first and second are as much confounded together, as those of Osiris and Sesostris. *Div. Leg. book iv. sect. 5.*

The Greek Christians had so high an opinion of the antiquity of the first Egyptian Hermes, who lived at Sais, that they supposed him, and the antediluvian patriarch, Enoch, to have been the same person, and give to both the same inventions. We are told likewise, that Manetho extracted his history and dynasties of the Egyptians from certain pillars in Egypt, on which inscriptions had been made by Thothe.

E e

in this lyre, it is reasonable to suppose that the invention of it was due to the *first* Egyptian Mercury: for that attributed to the Grecian had more strings, as will be shewn hereafter. Most of the writers on music among the ancients have supposed, that the three sounds of this *primitive lyre* were E, F, G; though Boethius, who makes the number of strings four, says they were tuned thus: E, A, B, e; but this tuning, if not invented by Pythagoras, was at least first brought into Greece by that philosopher.

No less than forty-two different works are attributed to the Egyptian Hermes by ancient writers (*f*); of these the learned and exact Fabricius has collected all the titles (*g*). It was usual for the Egyptians, who had the highest veneration for this personage, after his apotheosis, to have his works, which they regarded as their Bible, carried about in processions with great pomp and ceremony: and the first that appeared in these solemnities was the chanter, who had two of them in his hands, while others bore symbols of the musical art. It was the business of the *chanters* to be particularly versed in the two first books of Mercury, one of which contained the hymns to the Gods, and the other maxims of government: thirty-six of these books comprehended a complete system of Egyptian philosophy; the rest were chiefly upon the subjects of medicine and anatomy (*h*).

These books upon theology and medicine are ascribed by Marsham (*i*) to the second Mercury, the son of Vulcan, who, according to Eusebius (*k*), lived a little after Moses; and this author, upon the authority of Manetho, cited by Syncellus,

Thoth, or the first Mercury, in the sacred letters, *before the flood*! Vid. Dodwell *Dissert. de Sanchon. Fabric. Bib. Gr. Stillingfleet. Orig. Sac. et alios.*

(*f*) Clem. Alex. Strom. lib. vi.

(*g*) Bib. Græc. tom. i.

(*h*) Several of these works, however, if we may judge by their titles, seem to have

been upon the subject of music and poetry, as, 1. Ὑμνὸς Θεῶν. 19. Περὶ ἱμνῶν. 39. Περὶ ὀργάνων, &c. and among his inventions are enumerated, *Musica*, or the nature and properties of sound, φωνῶν; and the use of the lyre.

(*i*) Chro. Sæc. 1.

(*k*) In Chron.

regarded

regarded the second Mercury as the Hermes, surnamed Trismegistus. Enough has been said, however, to prove, that the Egyptian Mercuries, both as to the time when they flourished, and their attributes, were widely different from the Grecian Hermes, the son of Jupiter and Maia.

Though so ancient and honourable an origin has been assigned to the *Dichord* and *Trichord*, which can both be fairly traced from Egypt, yet the single flute, or *Monaulos*, is said by several writers not only to be a native of that country, and of much higher antiquity than the lyre, but, according to Athenæus, from Juba's *Theatrical History*, to have been invented by Osiris himself (l). The Egyptians called it *Photinx*, or crooked flute; its shape was that of a bull's horn, as may be seen in many gems, medals, and remains of ancient sculpture. Not only the form of this instrument, but the manner of holding it, is described by Apuleius, in speaking of the mysteries of Isis: "Afterwards, says this author, came the flute players, consecrated to the great Serapis, often repeating upon the *crooked flute* turned towards the right ear, the airs commonly used in the temple (m)." All the representations which I have seen of this instrument, have so much the appearance of *real horns*, that they encourage a belief of its great antiquity; and that the first instruments in use of this kind, were not only suggested by the horns of dead animals, but that the horns themselves were long used as musical instruments, at least those

(l) Τοῦ Μοναυλον Οσιριδος ειναι ευρημα, καθαπερ και τον καλυμενον φωτιγλα πλαγισαυλον. *Deipnosoph.* lib. iv. However, Plutarch says, that Apollo was not only the inventor of the *cithara*, but likewise of the flute: ου μόνη δὲ κιθαρα Απολλωνος, ἀλλὰ καὶ αὐλητικῆς, καὶ κιθαριστικῆς οὐρησῆς ὁ Θεός. Indeed it was a very common practice with antiquity, to attribute to the Gods all the discoveries and inventions to which there were no lawful claimants among mortals. And though we may now venture to doubt of all the *marvellous* facts, which have

been so seriously related by the most respectable historians of Greece and Rome, yet we must allow that the giving the invention of music, and musical instruments to the Gods, proves them to have been of the most remote antiquity, and held in the highest estimation by such as bestowed upon them so honourable an origin.

(m) *Ibant et dicati magno Serapidi tibicines, qui per obliquum calamus ad aurem pertractum dextram, familiarem templi deque modulum frequentabant.* *Metamorph.* lib. xi.

founded by the Hebrew priests at the siege of Jericho, we are repeatedly told, were *trumpets made of ram's horns* (n).

Before the invention of the flute, music could have been little more than metrical, as no other instruments, except those of percussion, were known; and when the art was first discovered of refining and sustaining tones, the power of music over mankind was probably irresistible, from the agreeable surprise, which soft and lengthened sounds must have occasioned. But proofs can be given of the Egyptians having had musical instruments in use among them, capable of much greater variety and perfection than those hitherto mentioned, at a time when all the rest of the known world was in a state of the utmost barbarism.

Thebes or Diospolis, that is the city of Jupiter, in Upper Egypt, was built, according to Sir Isaac Newton, by Osiris, and dedicated to his father Ammon, which was the original Egyptian name for Jupiter, who was the first mortal that can be found in profane authors, to whom temples were erected, and divine honours paid (o). Of this city, perhaps the most ancient in the world, amazing remains are still subsisting. It was chiefly built on the right side of the Nile in Upper Egypt. Its hundred gates celebrated by Homer (p) are well known. The Greeks and Romans have perpetuated its magnificence, though neither ever saw more than its ruins (q).

Herodotus says, that Egypt in general surpassed all other countries in things admirable, and beyond expression remarkable (r); and Dr. Pococke, and captain Norden, who visited that country but lately (s), agree in giving such a splendid ac-

(s) Both these travellers were in Egypt at the same time; that is, during the years 1737 and 1738, though neither of them was acquainted with the other's person or design;

count of Egyptian antiquities, as confirms all that ancient writers have related of its former magnificence.

It is agreed by all writers that the pyramids are works of the most remote antiquity, though the time and object of their construction still remain a mystery (*t*).

The city of Thebes in the time of Strabo was ten miles long (*u*), and the magnificent tomb of Ismandes, or Osymanduas, so particularly described by Diodorus Siculus (*x*), Dr. Pococke thinks, from its stupendous ruins still remaining, which extend more than half a mile, that it must greatly have exceeded all that the Greek writers have said of it (*y*). But the circumstance of the greatest importance to the present purpose is, that the same author in his account of the remains of this sepulchre, tells us that the walls of its rooms are still adorned with sculpture, and with *instruments of music*. Now as the prince whose tomb this is imagined to be, reigned, according to Diodorus Siculus, and other authors, who mention him, many ages before Sesostris, we cannot allow less than 3000 years to the antiquity of these representations of such musical instruments as were then known and practised in Egypt (*z*). The mention of which in the books above cited, had awakened an ardent desire in me to know of what kind they could be; but as neither Dr. Pococke had described them, nor captain Norden given them a place in his drawings from Egyptian Antiquities, and as the death of

design; however, there is no material difference in their accounts of the extraordinary things they saw in that country.

(*t*) M. Diderot has ingeniously imagined that long before the invention of letters, they were the Bibles of Egypt, and constructed as the receptacles and repositories of all human science, expressed in hieroglyphics; which though time has effaced, yet the pyramids themselves have resisted the destructive power of the elements, to which they have been for so many ages exposed. *Encyclop. Art. EGYPTIENS.*

(*u*) *Lib. xvii. p. 816.*

(*x*) *Lib. i. sect. 2.*

(*y*) *Description of the East.*

(*z*) According to Dr. Blair, the kingdom of Egypt, of the Diospolitan succession had subsisted 1663 years, when it was conquered by Cambyfes, king of Persia, 525 years before the Christian æra. And as the same excellent chronologer fixes the reign of Sesostris 1485 years B. C; and Diodorus Siculus tells us that Osymanduas lived twenty-seven generations earlier than that conqueror, it throws the invention and use of musical instruments in Egypt, full 2000 years B. C. and near 4000 years from the present period.

both

both these travellers had put it out of my power to consult them, I had no resource till the arrival of Mr. Bruce; the celebrity of whose extensive knowledge of Eastern countries, as well as of his excellent drawings, and philosophical reflections, made me hope for a full gratification of my wishes. And I was not disappointed; for, upon application to this intrepid and intelligent traveller, who had explored so many regions of the earth unknown to the inhabitants of Europe, he not only furnished me with exquisite drawings of two instruments of the most curious kind, and of the greatest importance to my work, but honoured me with a letter relative to them, as well as to the state of music in Abyssinia, with a permission to publish it; a circumstance the more flattering to myself, and which must afford my readers the greater satisfaction, as Mr. Bruce, among his innumerable acquirements of other kinds, has, by study, practice, and experience, rendered himself an excellent judge of the subject of music.

I shall therefore hasten to gratify the curiosity of my readers by laying before them the information with which I have been favoured relative to my particular subject, which will doubtless be the more acceptable to them, as it contains the first and only intelligence of any kind from Mr. Bruce, to which he has hitherto set his name, or that he allows to be authentic.

Kinnaird, Oct. 20, 1774.

DEAR SIR,

I have employed the first leisure that bad weather has enabled me to steal from the curiosity and kindness of my friends, to make you two distinct drawings of the musical instruments you desired of me. I sit down now to give you some particulars relative to them, and to other instruments of less consequence, which I found in my voyage in Abyssinia to the fountains of the Nile.

I need not tell you that I shall think myself overpaid, if this, or any thing else in my power, can be of service to you,
or

or towards the history of a science, which I have always cultivated, with more application than genius; and to which I may say, however, that I owe some of the happiest moments of my life.

I have kept both the lyre and harp of such a size as not to exceed the bounds of a quarto page; but I hope you will find that all the parts appear distinctly. I did not chuse to embarrass the harp with the figure which is playing upon it, because this would necessarily conceal great part of the instrument; and your business is with the instrument, not with the figure.

There are six musical instruments known in Abyssinia; the *Flute*, the *Trumpet*, the *Kettle-drum*, the *Tambourine*, the *Sistrum*, and the *Lyre*.

The four first are used in war, and are by much the most common; the fifth is dedicated to the service of the church; and the sixth is peculiarly an attendant on festivity and rejoicings.

There are two principal languages in Abyssinia, the *Æthiopic*, which is the literal, or dead language; and the *Amharic*, or language of *Amhara*, spoken by the court.

The *Flute*, in the *Æthiopic*, is called *Kwetx*, a word difficult to be written or sounded in English: in the *Amharic*, it is called *Agädä*; it is about the shape and size of the German flute, but played upon long-ways, with a mouth-piece resembling that of the clarinet; its tone is not loud, but accompanied with a kind of jar, like a broken hautbois; not owing to any accidental defect, but to construction and design, as it would not be esteemed without it (a).

The kettle-drum is called in both languages *Nagareet*, because all proclamations are made by the sound of this drum, (these are called *Nägär*) if made by governors, they have the

(a) It is probable that the jar, mentioned here, arises from the vibration of a reed, which constitutes the difference between the tone of a hautbois and a flute.

force of laws in their provinces; but if made by the king, they are for all Abyssinia. The kettle-drum is a mark of sovereign power: whenever the king promotes a subject to be governor, or his lieutenant-general in a province, he gives him a kettle-drum, and standard as his investiture. The king has forty-five of these drums always beating before him when he marches. They are in shape and size like ours, only they are braced very disadvantageously; for the skin is strained over the outer rim, or lip of the drum, and brought a third down its outside, which deadens it exceedingly, and deprives it of that clear, metallic sound which ours has. Each man has but a single drum, upon the left side of his mule, and beats it with a crooked stick, about three feet long. Upon the whole, its sound is not disagreeable, and I have heard it at an incredible distance.

The third instrument is the small drum, called *Kăbăro*, in Æthiopic and Amharic; though in some parts of Amhara it is also called *Hătămo*. It is about half the diameter, and twice the length of our common drum; it is just the *tambourine* of Provence, only rounded to a point at the lower end. This is beaten always with the hand, and carried sometimes on foot, sometimes on horseback, when any inferior officer, (not having a *Nagareet*) marches.

The Trumpet is called *Mělĕkĕta*, or *Mělĕket*; and *Kenet* in Amharic, but *Keren* in Æthiopic, (or horn); which shews of what materials it was anciently formed. It is now made of a cane that has less than half an inch aperture, and about five feet four inches in length. To this long stalk is fixed at the end, a round piece of the neck of a gourd, which has just the form of the round end of our trumpet, and is on the outside ornamented with small white shells; it is all covered over with parchment, and is a very neat instrument. This trumpet sounds only one note, E, in a loud, hoarse, and terrible tone (*b*). It is

(*b*) The New-Zealand trumpet, though extremely sonorous, is likewise monotonous, when it is blown by the natives,

though it is capable of as great a variety of tones as an European trumpet.

played

played slow when on a march, or before an enemy appears in sight; but afterwards it is repeated very quick, and with great violence, and has the effect upon the Abyssinian soldiers of transporting them absolutely to fury and madness, and of making them so regardless of life, as to throw themselves in the middle of the enemy, which they do with great gallantry. I have often in time of peace tried what effect this charge would have upon them, and found that none who heard it could continue seated, but that all rose up and continued the whole time in motion.

The fifth instrument is the *Sistrum*: it is used in the quick measure, or in allegros, in singing psalms of thanksgiving. Each priest has a sistrum, which he shakes in a very threatening manner at his neighbour, dancing, leaping, and turning round, with such an indecent violence, that he resembles rather a priest of paganism, from whence this instrument was derived, than a Christian. I have forgot the name of the sistrum in *Æthiopic*, but on looking into my notes I shall find it.

The sixth and last instrument is the *Lyre*, which is never played solo, but always in accompanying the voice, with which it plays constantly in unison; nor did I ever hear *music in parts*, in any nation, savage or polished, out of Europe: this is the last refinement music received, after it was in possession of complete instruments, and it received it probably in Italy.

The lyre has sometimes five, sometimes six, but most frequently seven strings, made of the thongs of raw sheep or goat skins, cut extremely fine, and twisted; they rot soon, are very subject to break in dry weather, and have scarce any sound in wet. From the idea, however, of this instrument being to accompany and sustain a voice, one would think that it was better mounted formerly.

The Abyssinians have a tradition, that the sistrum, lyre, and tambourine were brought from Egypt into Ethiopia, by Thot,

in the very first ages of the world. The flute, kettle-drum, and trumpet, they say, were brought from Palestine, with *Menelek*, the son of their queen of Saba, by Solomon, who was their first Jewish king.

The lyre in Amharic is called *bēg*, (the sheep); in Ethiopic, it is called *mēsīnkō*; the verb *ſinko* signifies to strike strings with the fingers: no *plectrum* is ever used in Abyssinia, so that *mēsīnkō* being literally interpreted, will signify *the stringed instrument played upon with the fingers*. This would seem as if anciently there was no other stringed instrument in Abyssinia, nor is there any other still.

Indeed the guitar is sometimes seen in the hands of the Mahometans, but they have brought it with them from Arabia, where they go every year for trade or devotion. This instrument having a neck, is, from that circumstance, surely modern. Necks were probably invented after strings of different lengths and sizes had been so multiplied upon the harp and lyre, that more could not be added without confusion. This improvement of producing several notes upon one string, by shortening it with the momentaneous pressure of the fingers was then introduced, and left little more to do, besides the invention of the bow, towards bringing stringed instruments to their utmost perfection.

The sides which constitute the frame of the lyre were anciently composed of the horns of an animal of the goat kind, called *Agāzān*, about the size of a small cow, and common in the province of *Tigrē*. I have seen several of these instruments very elegantly made of such horns, which nature seems to have shaped on purpose. Some of the horns of an African species of this animal may be seen in M. Buffon's History of the King of France's Cabinet. They are bent, and less regular than the Abyssinian; but after fire-arms became common in the province of *Tigrē*, and the woods were cut down, this animal being more scarce, the lyre has been made of a light red wood;

how-

however, it is always cut into a spiral twisted form, in imitation of the ancient materials of which the lyre was composed. The drawing I send you was from one of these instruments made of wood (c).

The kingdom of Tigrē, which is the largest and most populous province of Abyssinia, and was, during many ages, the seat of the court, was the first which received letters, and civil and religious government; it extended once to the Red Sea: various reasons and revolutions have obliged the inhabitants to resign their sea coast to different barbarous nations, Pagan and Mahometan; while they were in possession of it they say that the Red Sea furnished them with tortoise shells, of which they made the bellies of their lyres, as the Egyptians did formerly, according to Apollodorus, and Lucian; but having now lost that resource, they have adopted, in its place, a particular species of gourd, or pumpkin, very hard and thin in the bark, still imitating with the knife the squares, compartments, and figure of the shell of the tortoise.

The lyre is generally from three feet, to three feet six inches high; that is, from a line drawn through the point of the horns, to the lower part of the base of the sounding board. It is exceedingly light, and easy of carriage, as an instrument should naturally be, in so rugged and mountainous a country.

When we consider the parts which compose this lyre, we cannot deny it the earliest antiquity. Man, in his first state, was a hunter, and a fisher, and the oldest instrument was that which partakes most of that state. The lyre composed of two principal pieces, owes the one to the horns of an animal, the other to the shell of a fish.

It is probable that the lyre continued with the Ethiopians in this rude state, as long as they confined themselves to their

(c) See Pl. V. No. 6.

rainy, steep, and rugged mountains; and afterwards, when many of them descended along the Nile in Egypt, its portability would recommend it in the extreme heats and weariness of their way. Upon their arrival in Egypt, they took up their habitation in caves, in the sides of mountains, which are inhabited to this day. Even in these circumstances, an instrument larger than the lyre must have been inconvenient, and liable to accidents, in those caverns; but when these people increased in numbers and courage, they ventured down into the plain, and built Thebes. Being now at their ease, and in a fine climate, all nature smiling around them, music, and other arts, were cultivated and refined, and the imperfect lyre was extended into an instrument of double its compass and volume. The size of the harp could be now no longer an objection, the Nile carried the inhabitants every where easily, and without effort; and we may naturally suppose in the fine evenings of that country, that the Nile was the favourite scene upon which this instrument was practised; at least the sphinx and lotus upon its head, seem to hint that it was someway connected with the overflowings of that river.

Behind the ruins of the Egyptian Thebes, and a very little to the N. W. of it, are a great number of mountains, hollowed into monstrous caverns; the sepulchres, according to tradition, of the first kings of Thebes. The most considerable of these mountains thus hollowed, contains a large sarcophagus of granite, of which the lid only is broken. Pococke, I think, (for though I have sometimes looked into him, I never could read him) was in this grotto, and slept here, I suppose, for he takes no notice of one of the few monuments from which we may guess at the former state of arts in Europe.

In the entrance of the passage which leads, sloping gently down, into the chamber where is the sarcophagus, there are two pannels, one on each side; on that of the right, is the figure of the *scarabæus Thebaicus*, supposed to have been the hiero-

hieroglyphic of immortality; on the left, is the crocodile, fixed upon the apis with his teeth, and plunging him into the waves: these are both moulded in basso-relievo, in the stucco itself. This is a sufficient indication of the grotto, to any one who may wish to examine it again. At the end of the passage on the left-hand, is the picture of a man playing upon the harp, painted in fresco, and quite entire.

He is clad in a habit made like a shirt, such as the women still wear in Abyssinia, and the men in Nubia. This seems to be white linen or muslin, with narrow stripes of red. It reaches down to his ancles; his feet are without sandals, and bare; his neck and arms are also bare; his loose, wide sleeves, are gathered above his elbows; his head is close shaved; he seems a corpulent man, of about fifty years of age, in colour rather of the darkest for an Egyptian.

To guess by the detail of the figure, the painter should have had about the same degree of merit with a good sign-painter in Europe; yet he has represented the action of the musician in a manner never to be mistaken. His left hand seems employed in the upper part of the instrument among the notes in *alto*, as if in an *Arpeggio*; while stooping forwards, he seems with his right hand to be beginning with the lowest string, and promising to ascend with the most rapid execution; this action, so obviously rendered by an indifferent artist, shews that it was a common one in his time, or, in other words, that great hands were then frequent, and consequently that music was well understood, and diligently followed.

If we allow the performer's stature to be about five feet ten inches, then we may compute the harp in its extreme length to be something less than six feet and a half. It seems to support itself in equilibrio on its foot, or base, and needs only the player's guidance to keep it steady. It has thirteen strings; the length of these, and the force and liberty with which they are treated, shew that they are made in a very different manner from those of the lyre.

This

This instrument is of a much more elegant form than the triangular Grecian harp. It wants the fore-piece of the frame, opposite to the longest string, which certainly must have improved its tone, but must likewise have rendered the instrument itself weaker, and more liable to accidents, if carriage had not been so convenient in Egypt. The back part is the sounding board, composed of four thin pieces of wood, joined together in form of a cone, that is, growing wider towards the bottom; so that, as the length of the string encreases, the square of the correspondent space, in the sounding board, in which the tone is to undulate, always encreases in proportion.

Besides that, the whole principles upon which the harp is constructed are rational and ingenious, the ornamental parts are likewise executed in the very best manner; the bottom and sides of the frame seem to be fineered, or inlaid, probably with ivory, tortoise-shell, and mother of pearl, the ordinary produce of the neighbouring seas and deserts. It would be even now impossible to finish an instrument with more taste and elegance.

Besides the elegance of its outward form, we must observe, likewise, how near it approached to a perfect instrument; for it wanted only two strings of having two complete octaves in compass. Whether these were intentionally omitted or not, we cannot now determine, as we have no idea of the music or taste of that time; but if the harp be painted in the proportions in which it was made, it might be demonstrated that it could scarce bear more than the thirteen strings with which it was furnished. Indeed the cross-bar would break with the tension of the four longest, if they were made of the size and consistence, and tuned to the pitch that our's are at present.

I look upon this instrument, then, as the Theban harp, before and at the time of Sesostris, who adorned Thebes, and probably caused it to be painted there, as well as the other figures in the sepulchre of his father, as a monument of the superiority

*The Theban Harp,
From a Drawing made by James Bruce Esq.^r near the Ruins of
the Ancient City of Diospolis in Upper Egypt*

Grignon Sculp.^t

superiority which Egypt had in music at that time, over all the barbarous nations that he had seen, or conquered.

Astronomy, and, we may imagine, the other arts, made a rapid progress at this period in Upper Egypt, and continued to do so for fifty years after, between which time, and the Persian conquest, some catastrophe must have happened that reduced them to the lowest ebb, which historians have mistaken for their first original.

We know about the time of Sesostris, if, as Sir Isaac Newton supposes, this prince and Sefac were the same, that in Palestine the harp had only ten strings; but as David, while he played upon it, both danced and sung before the ark, it is plain that the instrument upon which he played, could have been but of small volume, we may suppose little exceeding in weight our guitar; though the origin of this harp was probably Egyptian, and from the days of Moses it had been degenerating in size, that it might be more portable in the many peregrinations of the Israelites.

The harp that approaches the nearest to this in antiquity, is represented upon a basso-relievo at Ptolemais, in the Cyrenai-cum, a city built by Ptolemy Philadelphus, and it is there twice represented.

It has fifteen strings, or two complete octaves; but the adding these two notes has occasioned likewise the addition of a fore-piece to sustain the cross-bar above, so that its form is triangular; the extremity of the base is rounded into a ram's-head, which seems to allude to its Theban original; and I should imagine that this instrument is likewise Egyptian, as no harp with such a number of strings has ever been seen, that I know of, in Grecian sculpture.

As the application of pedals has enabled us to disengage the modern harp from its multiplicity of strings, and brought it nearer to Theban simplicity, I hope our artists, and Merlin in particular, will, likewise, endeavour to introduce into its form a little

little of the Theban elegance. It is the favourite of the fair sex, and nothing should be spared to make it beautiful; for it should be a principal object of mankind to attach them by every means to music, as it is the only amusement that may be enjoyed to excess, and the heart still remain virtuous and uncorrupted.

I shall say nothing of the capabilities of this harp, nor what may be proved from it relative to the state of music, at a time when men were able to make such an instrument; I shall with impatience expect this detail from you, better qualified than any one I know now in Europe for this disquisition; it is a curious one, and merits your utmost reflection and attention.

It overturns all the accounts of the earliest state of ancient music and instruments in Egypt, and is altogether in its form, ornaments and compass, an incontestable proof, stronger than a thousand Greek quotations, that geometry, drawing, mechanics and music, were at the greatest perfection when this harp was made; and that what we think in Egypt was the invention of arts, was only the beginning of the æra of their restoration.

I am, &c.

JAMES BRUCE.

With respect to the lyre resembling a tortoise, which is now in common use in the particular province of Abyssinia, called Tigrè, I have only two observations to make, after the full and satisfactory account that has been given of it by Mr. Bruce: the first is, that its form exactly resembles the testudo, which is represented in the most ancient Greek sculpture, and described by the most ancient authors: the second is, that it does not appear from history that the Greeks ever penetrated into this country, or had any communication with its inhabitants: for even Alexander the Great never undertook an expedition against the Ethiopians, though when he consulted the oracle
of

of Jupiter Ammon, one of the first enquiries he made, was after the sources of the Nile. Ptolemy Euergetes, indeed, one of his successors in Egypt, having a passionate desire, in common with almost all the greatest men of antiquity, to discover the fountains of the Nile, with this view made an irruption into Ethiopia; but as he soon retreated thence, it is hardly to be imagined, that during a short hostile visit, he introduced music, or any of the arts of peace among the inhabitants: consequently, this instrument seems to have been originally invented in this country, and to have been continued in use there ever since.

I have now to speak of the *Theban Harp*, the most curious and beautiful of all the ancient instruments that have come to my knowledge. The number of strings, the size and form of this instrument, and the elegance of its ornaments, awaken reflections, which, to indulge, would lead me too far from my chief enquiries, and indeed out of my depth. The mind is wholly lost in the immense antiquity of the painting in which it is represented; indeed the time when it was executed is so remote as to encourage a belief, that arts, after having been brought to great perfection, were again lost, and again invented, long after this period; and there can be no doubt but that human knowledge and refinements have shared the same fate as the kingdoms in which they have been cultivated. They have had their gradual rise and declension; and in some of the countries first civilized, arts, by the arrival of new invaders, and establishment of new modes, new laws, and new governments, may be said to have experienced several deaths and regenerations; or, according to the Pythagoric doctrine, their souls may be said to have transmigrated through several bodies, since they have been inhabitants of this world.

With respect to the number of strings upon this harp, if conjectures may be allowed concerning the manner of tuning them, two might be offered to the reader's choice: the first idea that presented itself at the sight of thirteen strings was,

VOL. I. * F f that

that they would furnish all the semitones to be found in modern instruments, within the compass of an octave, as from C to c, D to d, or E to e. The second idea is more Grecian, and conformable to antiquity, which is, that if the longest string represented *Proslambanomenos*, or D, the remaining twelve strings would supply all the tones, semi-tones, and quarter-tones, of the diatonic, chromatic, and enharmonic genera of the ancients, within the compass of an octave: but, for my part, I should rather incline to the first arrangement, as it is more natural, and more conformable to the structure of our organs than the second: for, with respect to the Genera of the Greeks, though no certain historic testimony can be produced concerning the invention of the Diatonic and Chromatic, yet ancient writers are unanimous in ascribing to Olympus, the Phrygian, the first use of the Enharmonic (*d*); and though in the beginning the melody of this genus was so simple and natural as to resemble the wild notes and rude essays of a people not quite emerged from barbarism, yet, in after-times, it became overcharged with finical fopperies, and fanciful beauties, arising from such minute divisions of the scale, as had no other merit than the difficulty of forming them.

It seems a matter of great wonder, with such a model before their eyes as the Theban Harp, that the form and use of such an instrument should not have been perpetuated by posterity, but that many ages after, another, of an inferior kind, with fewer strings, should take place of it; yet, if we consider how little acquainted we are at present with the use, and even construction of the instruments which afforded the greatest delight to the Greeks and Romans, or even with others in common use in a neighbouring part of Europe but a few centuries ago (*e*), our wonder will cease; especially if we reflect upon the ignorance and barbarism into which it is possible for an ingenious people to be plunged, by the tyranny and devastation of a powerful and cruel invader.

(*d*) See *Dissertation*.

(*e*) See, in the musical *Tour through Germany and the Netherlands*, an account of

many modern musical instruments still subsisting at Antwerp, of which the use is wholly unknown, vol. i. p. 41.

It is but of small importance to us now, perhaps, to know what kind of musical instruments were in use among the Egyptians, in times so remote from our own; indeed it is a humiliating circumstance to reflect how little permanence there is in human knowledge and acquirements; and, before we attempt to improve our intellects, or refine our reason, how long and laborious a work it is to devise expedients for supplying the wants, and defending the weakness of our nature. Some ages, and some countries, have been more successful in these endeavours than others: however, there seems to be a boundary set to the sum total of our perfectibility, and, like the stone of Sisyphus, when we are arrived with infinite toil at a certain height, we are precipitated back to the level from whence we set off, and the work is to do again!

The arts and sciences of Egypt seem to have been long lost before prose was written in Greece, as no historian of that country ever saw Egypt in the time of its prosperity. Pythagoras was there a little before, and at the time of the Persian conquest, having been taken prisoner by Cambyfes in Egypt, from whence he was sent to Babylon: but of his writings nothing now remains, except a few apophthegms and fragments, which tradition has given to him. From the time that Psammetitus, the last native king of Egypt, was defeated by Cambyfes, 525 years B. C. the inhabitants of that country were always under a foreign yoke, and consequently from that period may be dated their ruin, and the utter extirpation of liberty and science among them: for honours and emoluments being wholly lavished upon foreigners, all expansion of genius must have been restrained among the natives, now become abject and debased, by neglect, or oppression. Indeed, after their voluntary submission to Alexander the Great, the dazzling glory of whose reign and character made them prefer his tyranny to that of the Persians, they had a race of splendid princes in the Ptolemies, that cultivated and encouraged arts and sciences, particularly Music; but these arts and sciences were wholly

Grecian, and their professors Greeks; for the native inhabitants had long lost every thing, but the superstitious rites and ceremonies of their religion. They had no books, but hieroglyphics, which were now no longer intelligible even to the Egyptians themselves; and we do not find, after the time of Alexander, that any were ever written, but in the Greek language.

It may be therefore said that the Egyptians ceased to be a people, at least a great and free people, before the time of the first Ptolemy, who founded the kingdom, which subsisted near 300 years under him and his successors. The three first of these monarchs, Ptolemy Soter, Ptolemy Philadelphus, and Ptolemy Euergetes, were magnificent princes, who encouraged arts and sciences, and by their bounty attracted to their court at Alexandria, men of genius and learning from all parts of the world. By these, their characters have been handed down to us with perhaps too much tenderness to their vices and infirmities. Augustus, Leo X. and Louis XIV. by rendering themselves favourites of the Muses in later times, found means to silence satire, and to have the fair side only of their characters turned towards posterity: however, nothing is more certain than that these princes were not wholly exempt from human frailties, over which the gauze of flattery has been spread, by those who basked in their smiles; but though such have been silent as to the defects of the Ptolemies in Egypt, their subjects in general were not blinded by that magnificence which was supported at their expence, as most of the cognomens given to these princes were ironical, and intended not to point out the virtues which they possessed, but those of which they stood most in need: as *Philadelphus*, the lover of his brother; *Euergetes*, beneficent; *Philopator*, the lover of his father; *Philomator*, the lover of his mother; titles that were given to sovereigns who had been so unnatural and cruel as to put to death their fathers, mothers, wives, brothers, sisters, and children!

During the reigns of these sumptuous and voluptuous princes it can hardly be doubted but that music was greatly cultivated
and

and encouraged at Alexandria. Athenæus, in his (f) minute description of the celebrated Bacchic Festival, given by Philadelphus, tells us, that more than six hundred musicians were employed in the chorus, and that among these there were three hundred performers on the cithara.

Under the seventh Ptolemy, surnamed *Physcon*, from his corpulency, and *Cacergetes*, from his cruelty, the same author informs us (g), that every species of art and science was cherished and taught in Egypt. For this prince having put to death a great number of the citizens of Alexandria, and banished others who had been attached to his brother, from whom he had usurped the crown, he filled his dominions with Grammarians, Philosophers, Geometricians, Musicians, School-masters, Painters, Physicians, and other persons capable of perfecting the arts; and these having no other subsistence than the fruits of their labour and diligence, contributed greatly to the propagation of knowledge throughout Egypt (h).

The father of Cleopatra, and the last of the Ptolemies, derived the title of *Auletes*, or the *Flute-player*, from his excessive attachment to that instrument. Strabo says of him (i), that besides his debaucheries, he applied himself in a particular manner to playing on the flute. He had such an opinion of his own abilities, as to institute musical contests at his palaces, and had there the courage to dispute the prize, publicly, with the first musicians of his time; and as the dress of players on the flute among the ancients was peculiar to that profession (k), this prince submitted to wear the robe, the buskins, the crown, and even the bandage and veil of a *Tibicen*, as may be seen on a beautiful Amethyst in the king of France's possession, of in-

(f) *Lib. v. Ed. Casaub. p. 201.*

(g) *Ib. lib. iv. p. 184.*

(h) It was perhaps during this period that the practice of music became sufficiently general among the common people of Egypt, to render credible the following assertion of a Dipsosophist in Athenæus: "It does not appear by the writings of any historian, says he, that there ever was a

people more skilled in music than those of Alexandria: for there is not a wretched peasant or labourer among them, who is not only able to play upon the lyre, but is likewise a perfect master of the flute."

Lib. iv. p. 176.

(i) *Lib. xvii.*

(k) There was one also for the lyrists.

estimable

estimable value, which is supposed to have been engraved by command of this prince, and worn by him to gratify his vanity on account of his musical excellence. Indeed the surname of *Auletes* is seriously given to him by Cicero, who had an esteem for him, and by Strabo. The first in his defence of Rabirius Posthumus (l); and the second, who was likewise his cotemporary, never mentions him but by the title of *Auletes* (m). He had likewise an opprobrious appellation given to him, by his own subjects, in the Egyptian language, of the same import, being called *Photingos*, or *Photingios*, from *Photinx*, *Monaulos*, or single flute. His violent passion for music, and for the company of musicians, gained him the name of ΝΕΟΣ ΔΙΟΝΥΣΟΣ, *the new Bacchus*, or patriarch of extravagance.

A melancholy truth forces itself upon the mind in reading the history of this prince, and that of the emperor Nero, whom he very much resembled, which is, that, if the heart is depraved, music has not the power to correct it. And though these musical princes obtained prizes in the public games, they acquired no honour to themselves, nor did they reflect any upon the profession of Music. A musician is so distant in character and dignity from a sovereign prince, that the one must stoop too low, or the other mount too high before they can approximate; and the public suffers, with equal impatience, a sovereign who degrades himself, or an artist who aspires at a rank above his station in the community.

An inordinate love of fame, or a rapacious desire of monopolizing all the glory as well as goods of this world to themselves, must have incited these princes to enter the lists in competition with persons so much their inferiors: a passion that should always be distinguished from the love of music, which they might have gratified, either from their own performance, or from that of others, in private, much more commodiously than on a public stage.

Notwith-

Notwithstanding all the proofs that have been already given, and which might be still produced of the cultivation of music by the Egyptians in very remote antiquity, as well as of the manner in which it was afterwards patronized by their sovereigns of Greek extraction, many ancient writers who visited Egypt after it was made a Roman province, speak of the inhabitants as the most melancholy and abject race of men upon the globe. According to Am. Marcellinus (n), they were not formed for mirth and pleasure; they worshipped their Gods with sorrow and tears, while the Greeks and Romans made religion an object of joy and festivity: and we are not only told by Diodorus Siculus, but by Plutarch, that the cultivation of music, an art which the Greeks thought so necessary to humanize and soften mankind, and render them gentle and obedient to the laws, was prohibited by their government. Dio Chrysostom informs us that poetry was interdicted among them, as well as music; and Strabo says that the sound of instruments was not heard in their temples, but that their sacrifices were made in silence.

All this is reconcileable and consonant to the nature of things: for when these writers visited Egypt, its inhabitants were in a state of slavery, and had been so for 500 years before; and though not, like the Jews, in a strange land, yet, like them, "they had hung their harps on the willows."

M. Pau (o), however, boldly asserts, that "the Egyptians, from a defect in the construction of their organs, and a want of genius, have never had any music but what was as detestable as that of the inhabitants of Asia and Africa is at present. If, continues this author, we consider the formation of a *sistrum*, whether of gold or iron, we must conclude that nothing but noise could proceed from it, which being united with the sound of a coarse flute, and the bleating of the ox Apis, would constitute such dissonance and jargon, as no ear accustomed to real music could support. As to the other musical instruments of Egypt, such as the Flageolet, Horn, Syrinx, Castagnet, Triangle, and Tambourine, it is easy, says he, to ima-

(n) *Lib. xxii. cap. 16.*

(o) *Recherches Philos. sur les Egypt. et les Chinois. Tome i. p. 243. et suivant.*

gine what kind of melody could be produced from them. Indeed it was so contemptible, that the priests would not allow it admission within the walls of their temples, where they sung their sacred hymns without being accompanied by any kind of instrument. But with respect to the general use of such music as they had, it seems to have served, adds M. Pau, as a necessary stimulus to action among the inhabitants of this country in ancient times, who were as unable as most of the Asiatics and Africans are at present, to perform any kind of labour, without being excited by screaming and noise; for such is the natural sloth and indolence of these people, that they want to be roused and animated every instant by the shrillness of flutes, and din of drums; instruments that have been found in every region of the two hemispheres where the climate is hot. Soft tones and graceful melody have no effect upon their obtuse organs; and this is the reason why music never has been, nor ever can be successfully cultivated among them."

This reasoning, however, does not appear to me so decisive as it does to the author. Athenæus (*p*) gives a list of songs that were sung, and tunes that were played by the Greeks of different professions; by which it appears that hardly any kind of work was performed by them without music. The Romans on many occasions made a like use of it: and the ancient Greeks and Romans were certainly a bold, manly, and robust people: the modern Scots are the same; however the bagpipe and song regulate all their operations. It seems to admit of but little doubt that the Egyptians had, in the most flourishing times of their empire, a music and instruments of their own, far superior to those of other countries less civilized and refined; that after their subjection by the Persians, this music and these instruments were lost: but under the Ptolemies, music, together with the other arts of Greece, were brought into Egypt, and encouraged at the court of Alexandria more than at any other place in the known world, till the captivity of Cleopatra, an event which terminated both the empire and history of the Egyptians.

T H E
H I S T O R Y
O F
H E B R E W M U S I C.

IT is not so much from the hope of being able to throw any new lights upon the music of this ancient people, that I dedicate a chapter to the subject, as out of respect for the first and most venerable of all books, as well as for the religion of my country, and for that of the most enlightened part of mankind, which has been founded upon it.

For notwithstanding the unremitting labours of the first fathers of the church, and the learning and diligence of innumerable translators and commentators, but few materials of great importance can be acquired for this part of my work, except what the Bible itself contains; as the first periods of the history of the ancient Hebrews, from its high antiquity, can receive no illustration from cotemporary historians, or from human testimony.

The chief part of what I have to do, therefore, is to collect the passages relative to those early ages of the world, the transactions of which are recorded in the sacred writings with such true and genuine simplicity, and to arrange them in chronological order; a task which, however trivial and easy it may seem, will not be without its use in a General History of Music; as it will at least shew, that this art has always had admission into

the religious ceremonies, public festivals, and social amusements of mankind.

The construction and use of musical instruments have a very early place among the inventions attributed to the first inhabitants of the globe, by Moses: for, Genesis chap. iv. verse 21, Jubal, the sixth descendant from Cain, is called "*the father of all such as handle the harp and organ.*"

But though this circumstance is mentioned so soon in the Pentateuch, yet it could have happened but a short time before the deluge, A. M. 1656; consequently the world must have been peopled many centuries before the invention took place (a).

No mention, however, is made in the Scriptures of the practice of music, till more than six hundred years after the deluge. But in Genesis xxxi. and 26th and 27th verses, about 1739 years before Christ, according to the Hebrew chronology, both vocal and instrumental music are spoken of as things in common use.

"And Laban said to Jacob, what hast thou done, that thou hast stolen away unawares to me, and carried away my daughters, as captives taken with the sword?"

"Wherefore didst thou flee away secretly, and steal away from me? and didst not tell me, that I might have sent thee away with mirth and with songs, with *tabret*, and with *harp*?"

Laban was a Syrian, and brother to Rebecca, Isaac's wife;

(a) With respect to the instrument called an *organ*, in the English version of this passage, it must not be imagined that such a noble and complicated machine is there implied, as the present instrument of that name. In the Hebrew it is called *buggab*, which, say the commentators, was a kind of *syrinx*, or *fistula*. The Septuagint, instead of *harp* and *organ*, has *ψαλτηριον και κιθαρον*, *psaltry* and *cithara*; the Syriac, *citharam* et *fides*; Chaldean paraphrase, *ipse fuit magister omnium ca-*

mentium in nablio, scientium cantium cithara et organi. *Nablio* is the Hebrew word for harp. The Arabic has *tympanum* et *citharam*; and the French has *le violon* et *les orgues*.

Hence it appears, that the translators, ancient and modern, of all parts of the world, not knowing what were the real forms and properties of the Hebrew instruments, have given to them the names of such as were of the most common use in their own countries.

so that the tabret and the harp should be ranked among Assyrian instruments.

After this time the sacred text furnishes no musical incident, till the year 1491 before Christ, when we have the first hymn, or psalm, to the Supreme Being, upon record. It contains the pious effusions of Moses, after the passage of the Red Sea, at the head of the whole people of Israel, just escaped from bondage.

“ Then sang Moses and the children of Israel this *song* unto the Lord, and spake, saying, I will sing unto the Lord, for he hath triumphed gloriously,” &c. Exod. xv.

Moses is seconded on this occasion by Miriam, the prophetess, and sister of Aaron, who “ took a timbrel in her hand, ver. 20; and all the women went out after her with timbrels and with dances.”

“ And Miriam answered them, *Sing ye to the Lord,*” &c.

Here is an early instance of *women* being permitted to bear a part in the performance of religious rites, as well as of vocal music being accompanied by *instrumental*, and by *dancing*.

The dithyrambics, or hymns to Bacchus, of the Greeks, have been supposed to originate from *Egypt* (b). These were constantly accompanied by *instruments*, and by *dance*, even after they were incorporated into tragedy. Now as Miriam was an Egyptian, and just escaped from the country where she had been educated, it is natural to suppose that the *dance* used now, and established afterwards by the Hebrews, in the celebration of religious rites, was but the continuation of an Egyptian custom.

(b) See Dissert. Sect. IX. p. 152.

The abbé Vatri, in an excellent essay upon the Origin and Progress of Tragedy, *Mem. de Litt. tome XV.* says, that all the etymologies of the term *dithyrambic*, are so forced, that he is firmly of opinion the word is not Greek, and that both the name and thing were brought from *Ægypt* with

the worship of Bacchus; for the Greeks are by no means agreed concerning the person who first made them acquainted with Bacchus; some affirming it to have been Cecrops, some Melampus, and some Orpheus; but all unite in deriving the worship of this God from the *Ægyptians*.

And we find music and *dancing*, soon after this ceremony, applied to another, that was indisputably of the same origin: for the people having obliged Aaron, in the absence of his brother, to make them a golden calf, in the likeness of the *Egyptian idol*, Apis, were found *singing* and *dancing* before it, by Moses, at his return to the camp (c).

The *trumpet* of the jubilee is likewise ordered to be sounded so soon after the flight from Egypt (d), that it must have been an Egyptian instrument.

St. Stephen tells us (e), that Moses, having been educated by Pharaoh's daughter "as her own son, was learned in all the wisdom of the Egyptians." And Clemens Alexandrinus (f) particularizes his acquirements, by affirming, that "he was instructed in his maturer age by the Egyptians in all liberal sciences, as arithmetic, geometry, rhythm, harmony, but, above all, medicine and music."

However, in the infancy of a state, a nation has but little leisure for cultivating music any otherwise than it is connected with religious rites, and the military art. Accordingly we find no other musical instrument mentioned during the administration of the great Hebrew legislator than trumpets, except the timbrel, used by Miriam. Numb. chap. x. 2. he is ordered by divine command to make two trumpets of silver of a whole piece, "for assembling together the people, and for journeying the camps." And in the eight following verses all the signals to be sounded by one and by two trumpets are regulated. But these instruments seem to differ from that of the jubilee, mentioned before, in nothing but the materials of which they were made: as the Hebrew text, and the several versions, agree in calling them all by one common name.

The feast of trumpets instituted by Moses, Numb. xxix. 1. in the month of September, is imagined to have been the ce-

(d) Levit. xxv. 9.

(e) Acts vii. ver. 21, 22.

(f) Stromat. lib. i.

lebration

lebration of harvest home. "And in the *seventh month*, on the first day of the month, ye shall have a holy convocation; ye shall do no servile work; *it is a day of blowing the trumpets unto you.*" The rigid observance of the Sabbath upon every seventh day, rendered seven a sacred number among the Hebrews. Hence, not only the *seventh day*, but the *seventh week*, the *seventh month*, the *seventh year*, and seven times seventh year, was kept holy: "And on the fiftieth year thou shalt cause the trumpet of the jubilee to sound throughout the land." Levit. xxv. 9.

The trumpets of *rams horns* used at the siege of Jericho, seem to have been less musical instruments, than military signals for the assailants to march and shout by, in order, *by their noise*, to terrify and dismay the enemy.

Upon this occasion all the powers of the number *seven* were put in practice. "Seven priests shall bear before them *seven trumpets*, and the *seventh day* ye shall compass the city *seven times*, and the priests shall blow with the trumpets." Josh. vi. 4.

No further mention is made of music, till the song of Deborah and Barak, Judges v. which seems to have been sung in dialogue, and wholly without instruments. It was about fifty years after this period, and eleven hundred and forty-three years before Christ, that the unfortunate daughter of Jephtha, upon hearing of her father's victory over the Ammonites, went out to meet him *with timbrels and with dances*: Judges, ii. 34. From this time, till Saul was chosen king, 1095, B. C. the sacred text is wholly silent about every species of music, except that of the trumpet in military expeditions.

But here an incident occurs, which seems to merit particular attention. It appears from many passages in Scripture, that *music* was as nearly allied to *prophecy* as to *poetry*.

When Samuel, after secretly anointing Saul king, instructs the new monarch in the measures he is to pursue for establishing

ing himself on the throne, says, "And it shall come to pass, when thou art come to the city (Beth-el), that thou shalt meet a company of prophets coming down from the high place, with a psaltery and tabret, and a pipe, and a harp before them, and they shall prophesy. And the Spirit of the Lord will come upon thee, and thou shalt prophesy with them (g)."

Who is ignorant, says Quintilian, that music in ancient times was so much cultivated, and held in such veneration, that musicians were called by the names of *prophets* and *sages* (h)?

Vates, in Latin, is a common term for *prophet*, *poet*, and *musician*. The oracles of the ancients were delivered in song; and the Pythian priests, who composed into hexameter verse the loose and disjointed expressions of the agonizing Pythia, were styled *prophets*, *προφηται* (i). These, according to Plutarch (k), "were seated round the sanctuary, in order to receive the words of the Pythia, and inclose them immediately into a certain number of verses, as liquors are enclosed in bottles."

Olen, one of the first priests of Apollo, was at once poet and prophet; and Phemonoe, the first priestess at Delphos, is related to have delivered her oracles in verse by inspiration only, without study or assistance.

The *improvvisatori* of Italy are still accompanied by an instrument, like the prophets of old; and Italian poets, who write down verses, sing at the time of composing them (l).

The examples in Scripture of this union of music and prophecy are numerous (m). "Moreover, David, and the captains of the host, separated to the service of the sons of Asaph, and of

(g) 1 Sam. ch. x. 5.

(h) *Nam quis ignorat muscen? Ut de hac primum loquar, tantum jam antiquis temporibus non studii modo, verum etiam venerationis habuisse, ut iidem musci, et vates, et sapientes indicarentur. Inst. lib. i. cap. 16.*

(i) Pausanias, in *Phoc.*

(k) In his *Treat. on the Cessation of Oracles.*

(l) This circumstance having been doubted, the Abate Metastasio himself was asked, whether the poets of his country sung at the time of writing verses? and his answer was, *sicuro!*

(m) See particularly 1 Kings, chap. xix. with the commentary of Don Calmet.

Heman,

Heman, and of Jeduthun, who should *prophecy with harps, with psalteries, and with cymbals*.—Of the sons of Asaph, four, who prophesied according to the order of the king:—Of Jeduthun, six, *who prophesied with a harp*, to give thanks, and to praise the Lord. And of the sons of Heman, the king's seer in the words of God, fourteen, *to lift up the horn (n).*"

But the most striking example of the custom practised by the prophets, of tranquilizing their minds, and exciting in themselves divine inspiration, by means of music, is in the second book of Kings (o).

The three sovereigns of Israel, Judah, and Edom, marching with their armies through a wilderness, were all upon the point of being destroyed by thirst, as there was no water to be found in their passage, either for man or beast.

"And the king of Israel said, Alas! that the Lord hath called these three kings together, to deliver them into the hand of Moab. But Jehoshaphat said, is there not here a prophet of the Lord, that we may enquire of the Lord by him? And one of the king of Israel's servants answered and said, Here is Elisha, the son of Shaphat. So the king of Israel and Jehoshaphat, and the king of Edom, went down to him.—And Elisha said, *bring me a minstrel*. And it came to pass when the minstrel played, that the hand of the Lord came upon him, and he said, Thus saith the Lord, make this valley full of ditches," &c.

Prophet, in some parts of the Scripture, seems to imply little more than a mere poet, or psalmodist, who sung extempore verses to the sound of an instrument, as the *improvvisatori* of Italy and Spain do at present. Sometimes, indeed, such inspiration was not likely to be of great service to the person upon whom it was conferred, nor on his hearers; for we are told, 1 Sam. chap. xvii. and x. "that the *evil* spirit from God came upon Saul, and he prophesied in the midst of the house."

(n) 1 Chron. chap. xxv.

(o) Chap. iii. 15.

It is supposed by many of the fathers and commentators, that the ancient Hebrews had a *college*, or *school*, of *prophets*, which must likewise have been a school of music; as the passages already cited from the sacred writings fully prove, that the prophets either accompanied themselves, or were accompanied by others with musical instruments, in the exercise of their functions.

David, by having cultivated music so early, seems to have been intended by his family for the *profession* of a *prophet*. St. Ambrose says, that he had always the gift of prophecy, and was chosen by God himself, in preference to all other prophets, to compose psalms (*p*).

And, according to Eusebius, David carried his harp, or, as this prelate calls it, his lyre, with him, wherever he went; to console him in his affliction, and to sing to it the praises of God. And in his preface to the Psalms, he asserts, that this prince, as head of the prophets, was generally in the tabernacle, with his lyre, amidst the other prophets and singers, and that each of them prophesied, and sung his canticle, as inspiration came on (*q*).

The Chaldean paraphrase understands by *prophesying*, "adoring God, and singing praises unto him."

The great Sanhedrim, says the bishop of Gloucester (*r*), seems to have been established after the failure of prophecies. And concerning the members of this body, the rabbins tell us, there was a tradition, that they were bound to be skilled in all sciences.

But in order to preserve the chronological chain of musical events, furnished by the sacred text, it will be necessary to resume the narrative at the time when David, on account of his great skill in music, was first called in to administer relief, by the power of his harp, to Saul, afflicted with an evil spirit.

(*p*) *Pref. in Psal. i.*

(*q*) It seems from a passage in 1 Chron. xxv. 2. as if Asaph used to prophesy,

that is, sing praises, to the accompaniment of David's harp.

(*r*) *Div. Leg. vol. iii. p. 352.*

If it be possible for music to operate medicinally with success, it may be imagined a palliative, at least, if not a cure, for a troubled spirit. The human mind, under the pressure of affliction, or warped and agitated by the contention of warring passions, seems a fit subject for soft and soothing strains to work upon, as powerful anodynes.

Without having recourse to a miracle in the case of Saul, who had offended the Divinity by his disobedience, the whole of David's power over the disorder of that unfortunate prince, might be attributed to his skilful and affecting manner of performing upon the harp.

“ And Saul's servants said unto him, Behold now, an evil spirit from God troubleth thee. Let our lord command now thy servants which are before thee, to seek out a man who is a cunning player on an harp (*p*). And it shall come to pass when the evil spirit (*q*) from God is upon thee, that he shall play with his hand, and thou shalt be well. And Saul said unto his servants, Provide me now a man that can play well, and bring him to me. Then answered one of the servants, and said, Behold, I have seen a son of Jesse the Beth-lehemite, that is cunning in playing, and a mighty valiant man, and a man of war; and prudent in matters, and a comely person, and the Lord is with him.”

“ Wherefore Saul sent messengers unto Jesse, and said, Send me David thy son, which is with the sheep. And Jesse took an ass, laden with bread, and a bottle of wine, and a kid, and sent them by David his son unto Saul. And David came to Saul, and stood before him. And he loved him greatly, and he became his armour-bearer. And Saul sent to Jesse, saying, Let David, I pray thee, stand before me; for he hath found favour in my sight. And it came to pass, when the evil spirit from God was upon Saul, that David took an harp, and played

(*p*) It should seem from this passage, that music was regarded by the Hebrews as

a common cure for madness.

(*q*) That is, the fit of insanity.

with his hand : so Saul was refreshed, and was well, and the evil spirit departed from him (r)."

It was very natural for the power of this medicine to cease, when the patient had no more faith in him who administered it, but, on the contrary, regarded him with a jealous eye, as one aspiring at his crown ; and who, if he did not conspire against his life, must look upon it as an impediment to his exaltation, and impatiently wish for its termination : for Saul not to have had these ideas forced upon his mind, he must have been more, or less, than mortal. The human passions, those *gales of life*, must either have been annihilated, or sublimed by angelic refinement. But the history of this prince furnishes too many instances of human weakness and frailty, to allow us to suppose him either insensible, or superior to his situation. We must therefore suppose his disease now to have become too powerful for so gentle a remedy as music. Nor ought we to imagine that a disease, or " an evil spirit from the Lord, with which he was troubled," was intended to be radically cured by human means, though it had at first given way to them.

Soon after David had manifested by this instance his musical skill, we find him a volunteer in the army of Saul, and giving extraordinary proofs of his military prowess, by his victory over Goliath, the champion of the Philistines, who had struck such a terror into his countrymen, that they all declined to accept his challenge, regarding him as invincible. David returning from the field of battle after his victory over the giant, was met by the women of all the cities of Israel, " singing and dancing, with tabrets, with joy, and with instruments of music."

1 Sam. xviii. 6 (s). " And the women *answered* one another as they played, and said," &c. This is an indubitable proof of

(r) 1 Sam. chap. xvi. This event happened, according to the Bible chronology, 1063 years before Christ. The harp that David used upon the occasion, is called in the Hebrew *cinara*.

(s) *In tympanis letitiæ et fistris*, says the

Septuagint. But the ancient rabbins, and modern Jews, are not agreed among themselves with respect to the instruments mentioned in the Old Testament ; so that it is as vain to attempt at reconciling, as at converting them,

a chant

a chant in dialogue, or, *à dui cori*, being in early use: and it was this which probably gave rise to the manner of chanting the Psalms in the cathedral service. Psalm lxviii. ver. 25, the *damsels* play with timbrels in the procession before the ark. Women, even, says Don Calmet, whom the apostle forbids to speak in church, had the privilege to sing there in company with the men. But many proofs might be alleged of a permission being given for females to assist in the performance of sacred rites. In 1 Chron. chap. xxv. where the musical establishments for religious purposes are all enumerated, we are told, that "God gave to Heman fourteen sons, and *three daughters*. And *all these* were under the hands of their father *for song*, in the house of the Lord, with cymbals, psalteries, and harps." But Miriam, Deborah, Judith, and Anne, the mother of Samuel, are all regarded by the Jews not only as *singers*, but as *poetesses* and *prophetesses*.

In the reign of king David, music was held in the highest estimation by the Hebrews. The genius of that prince for music, and his attachment to the study and practice of it, as well as the great number of musicians appointed by him for the performance of religious rites and ceremonies, could not fail to extend its influence, and augment its perfections: for it was during this period, that music was first honoured, by being admitted in the ministry of sacrifice, and worship of the ark; as well as by being cultivated by a king.

"And David, and all the house of Israel, played before the Lord, on all manner of instruments, made of firwood (*t*), even on harps and on psalteries, and on timbrels, and on cornets, and on cymbals." 2 Sam. chap. vi. ver. 5 (*u*).

(*t*) This species of wood, so soft in its nature, and sonorous in its effects, seems to have been preferred by the ancients, as well as the moderns, to every other kind, for the construction of musical instruments, particularly the bellies of them, upon which their tone chiefly depends. Those of the harp, lute, guitar, harpsichord, and

violin, in present use, are constantly made of fir wood.

(*u*) Heb. *Nablis, et cinneris, et cymbalis, et tympanis*. Septuag. *ἐν ὄργανοις καὶ ἐν ᾠδαῖς, ἐν τὰβλαῖς, ἐν τυμπαναῖς, ἐν κυμβάλαις, καὶ ἐν αὐλοῖς*. Vulg. *Citharis et lyris, et tympanis, et fistris, et cymbalis*. Syr. *David autem omnes Israelitæ ludebant coram Domina lignis*

This is related in 1 Chron. chap. xiii. ver. 8. in nearly the same words :

“ And David and all Israel played before God, with all their might, and with singing and with harps, and with psalteries, and with timbrels, and with cymbals, and with trumpets (x).”

In all the translations these instruments are differently named. In the Syriac we are told, that David and all Israel sung before the Lord, accompanied by the cithara, psaltery, cymbal, and sistrum (y).

The joy which David shewed, upon this occasion, in leaping, dancing, singing, and playing, almost naked before the ark, seemed, in the eyes of his queen Michal, to exceed the bounds of moderation, so much, that when she saw him from the window, “ she despised him in her heart,” 2 Sam. vi. 16, and, afterwards, upbraided him, in terms not very honourable to musicians in general.

“ And Michal, the daughter of Saul, came to meet David, and said, How glorious was the king of Israel to day, who uncovered himself in the eyes of the hand-maids of his servants, as one of the *vain fellows* shamelessly uncovereth himself !”

Now it is much to be feared, that by the *vain fellows*, the queen meant Levitical singers, musicians by trade, who, perhaps, like the ancient priests of the Syrian goddess, the Galli, used to sing and play in the processions naked.

lignis cedrinis et abiegnis, nablis, citharis, tympanis, fistris, ac cymbalis. The Targum, or Chaldee paraphrase, mentions an instrument not to be found in the original, or in any of the translations : *in chinaris, in nablis, in tympanis, et in quadruplicibus, et cymbalis.* Arab. *Fidibus, nablis, tympanis quadratis, et cymbalis.* Here it should seem to be a *square drum*.

(x) Don Calmet observes, that by the titles of many of the Psalms, it appears as

if David, though a great king, did not disdain to perform himself the part of *maestro di capella*, or director of the sacred band of musicians ; and, penetrated as he was with the grandeur of the Supreme Being, he never thought he degraded himself by singing before the Lord, any more than by conducting the musical performers on great and solemn occasions.

(y) In the Arabic, it is with flutes, cymbals, bells, and harps.

In

In the fifteenth, sixteenth, and twenty-third chapters of the first book of Chronicles, there is a particular account and enumeration of all the musicians appointed by David in the service of the ark, before a temple was erected. 1 Chron. xxiii. 5. David appoints four thousand of the Levites to praise the Lord with instruments; and chap. xxv. ver. 1. the number of such as were *instructed*, and were *cunning* in song, is said to have been two hundred fourscore and eight.

And, 1 Chron. ix. 33. we are told that "the *singers*, chief of the fathers of the Levites, who remaining in the chambers, were free: for they were employed in that work day and night."

Before this time, it does not appear from the sacred writings, that any other instruments than trumpets, or singing than in a general chorus of the whole people, was used in the daily celebration of religious rites; though others are mentioned in *processions*, and on occasions of joy and festivity.

It has ever been the custom of legislators and founders of religion, in compliance with the prejudices of mankind, to retain part of the former laws and religious institutions. The Egyptians, as has been already related, in the preceding chapter, divided the inhabitants of their country into *castes*, or tribes, confining each profession to one family. And as music was many ages confined by them to the priesthood, and to religious purposes, the Hebrews, who had their arts and sciences from the Egyptians, and who adopted many of their religious rites, as the primitive Christians did afterwards those of the pagans, in order to conciliate parties, and facilitate the establishment of a new worship, made both priests and musicians *hereditary* in the tribe of Levi. "And the sons of Aaron the *priests* shall *blow with the trumpets*, and they shall be to you for an ordinance *for ever* throughout your generations (a)." Accord-

(a) Numb. x. 8.

ingly,

ingly, during the life of Moses, none but the priests blew the trumpets, whether in peace or war : as, afterwards, in Joshua's administration, both at the siege of Jericho, and upon all other occasions, we find the office of blowing the trumpets was still confined to the priesthood : and, when David first regulated the musical establishments, for the service of religion, it appears, that not only the select band of singing men, and singing women, but all the four thousand performers upon instruments, were chosen from the families of priests and Levites.

Of the Musical Instruments mentioned in the Psalms.

To collect and expound all the passages relative to music in the Psalms of David, would be a useless labour. So many learned commentators have already done this work ; and these divine canticles may be imagined to be so deeply impressed in the hearts of all such as profess the Christian religion, both by education, and by constantly hearing them in the service of their several churches, that it would be the highest presumption in me to suppose myself capable of offering any thing new on the subject. However, the musical instruments so frequently mentioned in them, and the address prefixed to a great number of the Bible Psalms, shall have a few remarks bestowed upon them here ; as the subject, in a particular manner, seems to belong to the reign of the royal Psalmist, from whose piety, and poetic genius, so many of them are supposed to have flowed.

The fathers and commentators, however, are of opinion, that David neither was, nor could have been, the author of the *whole book* of Psalms ; as many of them were evidently written upon occasions that happened after his death. The learned and diligent Don Calmet, after the most deliberate investigation of the subjects of the several Psalms, has arranged them under the following heads :

I. Psalms

I. Psalms of which the chronology cannot be fixed: these are eight in number: the 1st, 4th, 19th, 81st, 91st, 110th, 139, and 145. It is not known whether David, or Asaph, was author of the first Psalm. The 81st, attributed to Asaph, was sung in the temple upon the *Feast of Trumpets*, at the beginning of the year, and at the *Feast of Tabernacles*. The 110th is given to David; the authors of the rest are wholly unknown (b).

II. Psalms composed by David, during the persecution of Saul, in number seventeen: these are the 11th, 31, 34, 56, 16, 54, 52, 109, 17, 22, 35, 57, 58, 142, 140, 141, 7.

III. Such as he composed at the beginning of his reign, and after the death of Saul, sixteen—which are the 2d, 9, 24, 68, 101, 29, 20, 21, 28, 39, 40, 41, 6, 51, 32, 33.

IV. Others written by David, during the rebellion of Absalom, amounting to eight—these are the 3d, 4th, 55, 62, 70, 71, 143, 145.

V. From the death of Absalom to the captivity, ten; of which David was the author of only three: the 18th, 30th, and 72d. This last was written upon the establishment of his son Solomon on the throne, and was probably the last of which he was the author.

VI. The Psalms composed during the captivity, which amount to forty, were chiefly by the descendants of Asaph and Korah.

VII. Those of joy and thanksgiving, for the permission ob-

(b) The English translators have followed the Hebrew distribution of the Psalms, by dividing the ninth Psalm into two; so that from that to the 114th our numbers differ from those of the Roman Catholics, who have followed the Greek of the Septuagint, which has made but one Psalm of the 9th and 10th. The Hebrew text likewise, and the English ver-

sion, differ in the same manner from the Septuagint and Vulgate, by dividing what they call the 113th Psalm into two, which are the 114th and 115th in our Psalter; so that our 116th Psalm is only their 114th. Here, however, they approximate again, and only differ by one number till the 146th, after which all parties agree.

tained from Cyrus to return to Jerusalem, and to rebuild the temple, as well as those composed for its dedication, fifty-one.

So that, according to this account, David was author of no more than forty-five of the hundred and fifty Psalms that are usually attributed to him.

As to the instruments mentioned by the several Psalmists, they are chiefly such as have already occurred in the Bible, concerning the names of which, specimens have repeatedly been given in the notes of this chapter, to shew the disagreement of translators. However, as almost all the Hebrew instruments are enumerated in the last Psalm, I shall here insert six different translations of the third, fourth, and fifth verses, to shew, once for all, that there is no dependence upon any one of them, or hope that these points can ever be cleared up.

Psal. cl. ver. 3, 4, 5. "Praise him in the sound of the *trumpet*, praise him upon the *lute* and *harp*.

"Praise him in the cymbals and dances, praise him upon the strings and pipe.

"Praise him upon the well-tuned cymbals, praise him upon the loud cymbals."

Latin version of the *Hebrew*. *Laudate eum in clangore buccinæ: laudate eum in nebel et cithara: laudate eum in tympano et choro: laudate eum in chordis et organo: laudate eum in cymbalis auditis: laudate eum in cymbalis ovationis.*

Targum paraph. Chald. *Laudate eum clangore buccinæ—psalteriis et citharis—tympanis et choris—tibiis et organis—cymbalis.*

Syr. *Laudate eum voce cornu—citharis ac lyris—tympanis et fistris—chordis jucundis—cymbalis sonoris—voce et clamore.*

Vulg. *Laudate eum in sono tubæ—in psalterio et cithara—tympano et choro—in chordis et organo—in cymbalis benesonantibus—in cymbalis jubilationis.*

Arab.

Arab. *Sonitu buccinæ—psalterio et citharâ—tympano et fistro—chordis et organo—fidibus dulcisonis—instrumentis psalmodiæ.*

The Septuagint agrees with the English version, except in the word *lute*, which is rendered *ναβλον*, *nablon*.

If the least ray of hope remain that a true idea of Jewish instruments can ever be acquired, it must be from the arch of Titus at Rome, where it is supposed that the spoils brought by that emperor from Jerusalem have been exactly represented in sculpture. Among these are several musical instruments, particularly the *silver trumpets*, called by the Hebrews *chatzotzeroth*; and *horns*, supposed to resemble the shawms, mentioned so often in the Scripture, called in Hebrew, *keranim*, or *sacerdotal trumpets*.

But the arch upon which these instruments are sculptured, though, according to Venuti, of excellent workmanship, was not erected till after the death of Titus; and, to say the truth, the instruments are of no uncommon form. The trumpets are long, strait tubes, as modern trumpets would be, if not folded up, for the convenience of the player; and the horns are such as frequently occur in ancient sculpture. Examples of both may be seen in Blanchini, Bartholinus, Montfaucon, Padre Martini, and all the writers upon ancient music; as well as in plate IV, No. 6 and 8, and plate V. and VI. of this work, engraved after original drawings, from Titus's arch, from Trajan's pillar, and bas-reliefs of still more ancient sculpture.

Of the Titles prefixed to the Bible Psalms.

Not only many of the fathers of the church, and commentators of the Psalms, but the Jews themselves, are so perplexed to find a meaning to these titles, that they are obliged to confess their utter ignorance and inability to expound them. However, some of the most learned and respectable interpreters of the sacred writings were of opinion, that as several of these

titles were found in the ancient Hebrew manuscripts, they must have been of divine authority, and coeval with the Psalms themselves. They believed likewise, that each was a key to the true sense and intention of the poem, and therefore should be inviolably retained, and studied with all possible care and veneration. St. Theodoret, who was learned in the Hebrew tongue, has proved, that these titles were not interpolations of the Septuagint interpreters, but that they found them in the original, which is come down to us from Ezra, to whose care the collecting the sacred writings is said to have been due.

It is as difficult, however, now, to determine which of these titles are genuine, as to explain their true meaning; for many have been added since the Septuagint translation was made, and some since the time of the fathers. The 90th Psalm, for instance, has none in the Hebrew; nor was there one in the Septuagint during the time of Eusebius and Theodoret; and yet there is one now in the Septuagint, and in the Vulgate.

Don Calmet, and before him Flaminius, frankly declare, that they are utterly unable to expound, or interpret, the titles of some of these Psalms. All the information that can be acquired from the rabbins on the subject is, that they suspect most of the terms which are involved in so much darkness, were the names of instruments, or of the melodies, which the Levites sung to these hymns in the temple. And this has determined many translators to preserve these words in the original Hebrew language, without attempting to give equivalents to them in any other. And it was the opinion even of several of the fathers, as well as of the most learned rabbins, that there was no hope of discovering the meaning of some of these words, as the ancient Hebrew music was then absolutely lost; so that neither the instruments they used, nor the force of the other words in the titles which may relate to their melody or measure, can be divined.

Genebrard

Genebrard is of the same opinion. He says, the Hebrew words in the titles of the Psalms, are generally terms of the ancient Hebrew music, at present unknown to us: and that they served as *keys* for the *tones* in which the several canticles were sung.

However, maister William Tindale, one of the first translators of the Bible into English, had more courage, if not more learning and sagacity than other expounders; for he boldly tells us that *Neginoth*, used in the title to the 4th, 54th, 55th, 61st, 67th, and 76th Psalms, *signifieth the tune, or note of the instrumentes, wher after the Psalmes before whiche it is presyred were songe. For the Psalmes were songe at certen instrumentes, but so that the swete tune and instrumente, prepared the mynde more perfectly to receyue the worde of the holy Dictie.*

This should seem something like the present custom of giving out a psalm-tune upon the organ, in our parish churches.

The same expounder informs us, that the Hebrew word *Nehiloth*, used in the title to Psalm 5, *signifyeth, by interpretation, beretrages; or, as some wyll, a certen instrumente of musicke.*

Psalm vi. *Sheminith*—*This worde signifyeth an eight, or an instrumente of musicke that hathe eight stringes.*

Psalm viii. To the chief musician upon *Gitith*. *After some this worde signifyeth, an instrumente of musicke.*

Psalm xvi. *Michtam* of David. *Meaneth nobilitie, or honour of chivalrie, or an instrumente of musicke.*

Psalm. xxii. *Aijelet* *Shahar*. *A certen instrumente of musicke, or as some wyll, a certayn kind of melodie; divers authors do diversly expound it, &c. (c).*

(c) This Bible was printed in black letter, 1549.

Lamnatzeach.

Most of the modern commentators join the rabbins in thinking, that *Lamnatzeach* implies, *to the music master*, or chief of the band; to the principal of the Levites who sung in the temple. The Hebrew word *Mnatzeach*, the primitive of *Lamnatzeach*, is used for the overseer, or superintendant of any body of workmen; to preside over, or conduct a band of singing men and singing women, or performers upon instruments.

In the Jewish temple, a great number of Levites were employed wholly in singing, and playing upon instruments. All the Levitical families either filled these offices, or others about the temple. Each family had a president, or chief, who had a great number of officers under his direction. A list of these has been already given: the principal were, Asaph, Heman, Ethan, and Jeduthun. Asaph and his brethren, not only sung these divine canticles, but composed others themselves. For we are informed that they were prophets and inspired, as well as excellent musicians. Each band, therefore, in the service of the temple, was distinguished from the rest, by the instruments upon which they played; and a performer of distinguished abilities was placed at the head of each. This leader was called *Mnatzeach*. Cheneniah is highly extolled in Chronicles for the power and sweetness of his voice; he was the *president*, or master of melody, and led off the canticles.

In the Bible Psalms, the title of the fourth Psalm runs thus: "To the chief musician on *Neginoth*." Tindale's title of this same Psalm is "To the *Chaunter* in *Neginoth*:" which in his notes he expounds as follows: "The which is here translated, *to the chaunter*, is in Hebrue *Lamnatzeach*, which word after Esra and David Kimki (expositoures in Hebrue) signifyeth to the chief of the syngars, whom we commonly cal in Englishe, the father of the quyre or chaunter. This interpretation also

do.

do boeth the moſte number, and the beſt lerned of the Lati-
niſtes, beſt alowe.”

Dr. Wallis defines *Lamnatzeach, magiſtro ſymphoniæ, aut præ-
fecto muſicæ (d)* And he thinks that ſome of the other titles
were intended to point out the kind of muſic, or inſtruments,
which the particular Pſalms require; but as both the Hebrew
muſic and inſtruments are now loſt, he confeſſes that it is
difficult to expound theſe words.

Selah.

This term occurs no leſs than ſeventy times in the Hebrew
text of the Pſalms, and formerly it muſt have been uſed there
ſtill more frequently, as we find it in ſeveral places of the Sep-
tuagint, where the Hebrew has it not. It is, like other literary
ſtumbling-blocks, grown bigger by time. The commentators
have moſt of them given it up as an opaque expreſſion, upon
which they are utterly unable to throw a ſingle ray of light;
and Don Calmet, among the reſt, after a great diſplay of eru-
dition, in giving the ſeveral clashing opinions of rabbins, fa-
thers, translators, and commentators, concerning the true im-
port of this impenetrable word, and carrying us through the
land of conjecture upon his great polemical horſe, ſets us down
juſt where he took us up: for, thinking it impoſſible to get at
the true meaning of the word, he inclines to ſuppoſe it of ſo
little conſequence, that it may well be omitted, without injur-
ing the ſenſe of the text. If it had, however, any meaning,
it ſeems to have been that which the Septuagint has given to it,
by rendering it *διαψαλμα*, a *pause in ſinging*, which muſt fre-
quently have been wanted before the Pſalms were divided into
verſes. The word *Selah* indeed occurs three times in the third
chapter of the prophet Habakkuk; but the connexion between
poetry, muſic, and prophecy, has been already ſhewn; and

(d) *De Pſalmorum Tituliſ, p. 298.*

there

there can be no doubt that Habakkuk uttered his revelations *in song*; for he begins this chapter, by calling it a prayer upon *Sigionoth*, which the Bible expounds in the margin, "according to the variable songs or tunes, called in Hebrew *Shigionoth*;" and ends, by addressing it "to the chief finger on my stringed instruments," or *Neginoth*.

The reign of Solomon, so long, so pacific, and so glorious to the Hebrews, may be regarded as the Augustan age of that people; whose prosperity, during this period, not only enabled them to cultivate arts and sciences among themselves, but stimulated foreigners to visit and assist them. And as we find that the Romans, during the time of Augustus and his successors, were indebted to the Greeks for a great part of their knowledge in the polite arts, so the Hebrews, under Solomon's government, had assistance from Egypt and from Tyre. Riches and renown never fail to attract talents into a country from neighbouring kingdoms. As to music and poetry, which were put upon so respectable a footing in the former reign, they seem to have had their share of attention in this; particularly in the service of the temple, at the dedication of which, if we may credit Josephus, "Solomon made two hundred thousand trumpets, according to the ordinance of Moses: (Moses was ordered to make *two trumpets* of silver only. Numb. x. 2.) and forty thousand instruments of music (as if trumpets were not instruments of music) to record and praise God with, as the psaltery and harp of a mixt matter, the fifth part gold, and the fourth part silver (*e*)."

This writer has often been accused of inaccuracy in other things; and with respect to music, his accounts neither bear the marks of judgment, nor fidelity; but we have information from much better authority, "That Solomon appointed, according to the order of David his father, the courses of the priests to their service, and the Levites to

(e) Lib. viii.

their

their charges, to praise and minister before the priests, as the duty of every day required (*f*)."

It is the opinion of many expounders and commentators of the sacred writings, that Solomon was author of some of the Psalms that are attributed to David. Of this we are certain, that he was no less fond of poetry than his father. In the first of Kings, iv. and xxv. we are told that "he spake three thousand proverbs : and his songs were a thousand and five." But whether, like the royal Psalmist, he was a practical musician, does not appear in the records of his reign. However, in Ecclesiastes, ii. 8. we find music mentioned by this voluptuous prince among the vain luxuries and vexations of spirit, with which he found himself fatiated : "I gat me men-fingers and women-fingers, and the delights of the sons of men, as musical instruments, and that of all sorts : " which is all that can be gathered on the subject of music during this splendid reign (*g*).

A century passed from the dedication of the temple, without the mention of any thing remarkable in Scripture concerning the music of the Hebrews, except the passage already cited, where Elisha calls for a minstrel to awaken inspiration, previous to his prophesying.

In the year 896, B. C. The *singers* are said to have contributed greatly towards obtaining a singular advantage in favour of Jehoshaphat, over the Ammonites and Moabites ; the musicians following the camp in the same order as they served in the temple, marched as a vanguard in the field with their instruments : "And the Levites of the children of the Kohathites, and the children of the Korhites, stood up to praise the Lord God of Israel with a loud voice on high.— And when Jehoshaphat had consulted with the people, he appointed singers unto the Lord, and that should praise the beauty of holiness as they went out before the army, and to

(*f*) 2 Chron. viii. 14.

(*g*) Solomon was made king during the

life-time of his father, 1015 B. C. and reigned forty years.

say,

say, Praise the Lord; for his mercy endureth for ever. And when they began to sing and to praise, the Lord set ambushments against the children of Ammon, Moab, and Mount Seir, which were come against Judah, and they were smitten (*h*)."

The Hebrews frequently attributed their success in battle to the animation given the troops by the trumpets, which were always blown by priests and Levites, whom the people highly revered, and regarded as inspired persons.

"And behold, God himself is with us, for our captain, and his priests with sounding trumpets, to cry alarm against you.—And when Judah looked back, behold, the battle was before and behind, and they cried unto the Lord, and the priests sounded with the trumpets. Then the men of Judah gave a shout; and it came to pass as the men of Judah shouted, that God smote their enemies (*i*)."

It was, in like manner, the part of the ancient Gallic, German, and British druids, who were not only priests, but musicians, to animate their countrymen to the fight.

Thus far we have only had to speak of the cultivation and improvement of music among the Hebrews; we have little more to add, except what will indicate its neglect and decline.

But few memorials remain concerning it, from the victory obtained by Abijah, till the captivity and destruction of Jerusalem and the temple, by the Babylonians, in the reign of Jehoiakim. Before this period, music, and other sacred rites, had been frequently much corrupted, during the wars, and by intercourse with foreign nations; and at every attempt to restore them to their former purity and splendor, we find the number of those employed in the service of the temple diminished, and their efforts more feeble and ineffectual. At the restoration of the royal family, after the crown had been usurped by Athaliah, we are told that "the princes and the trumpets stood by

(*h*) 2 Chron. xx. 19.

(*i*) 2 Chron. ch. xiii. v. 12.

the king : and all the people of the land rejoiced, and sounded with trumpets, also the singers with instruments of music ; and such as taught to sing praise." And Jehoida, during the minority of Joash, " appointed the offices with rejoicing, as it was ordained by David."—B. C. 878.—And in this reign we find that " the singers, the sons of Asaph," were restored to their places.

These continued, however, but a short time in the ministry, before they were driven out, and the king and people became profelytes to another form of worship. But after various revolutions both in religion and government, a powerful attempt was made, during the reign of Hezekiah, about 726 years B. C. to restore the temple to all its ancient splendor.

" And he set the Levites in the house of the Lord with cymbals, with psalteries, and with harps, according to the commandment of David.—And the Levites stood with the instruments of David, and the priests with the trumpets.—But the priests were too few" to perform all the ceremonies formerly solemnized in the temple. However, " there was now great joy in Jerusalem ; for since the time of Solomon, there was not the like in Jerusalem (*k*)."

But this happy period was of short continuance ; new schisms and new misfortunes soon put an end to it. And in the year 606 B. C. the Hebrew nation was subdued ; the temple plundered and destroyed ; and, soon after, both king and people were, by Nebuchadnezzar, sent captives to Babylon.

During the seventy years captivity, it is natural to suppose that the Hebrews were denied the celebration of their religious rites ; nor could they have much time, or inclination, for domestic amusements or festivity ; so that music, the child of leisure and happiness, and parent of innocent pleasure, must have been neglected, and shut out of their houses, as an unwelcome

(*k*) 2 Chron. xxix. 25.

guest. The idea of every thing that awakened recollection of former felicity, must have been painful in a state of slavery. "By the waters of Babylon we sat down and wept: when we remembered thee, O Sion. As for our harps we hanged them up, upon the trees that are therein. For they that led us away captives, required of us then a song, and melody in our havens: Sing us one of the songs of Sion. How shall we sing the Lord's song in a strange land? If I forget thee, O Jerusalem, let my right hand forget her cunning (1)."

These are the natural sentiments and feelings of a people but lately fallen from a state of prosperity and happiness, into that of bondage and misery.

It is reasonable to imagine, however, that a nation so prone to luxury and magnificence as that of their masters, the Chaldeans, would, like other eastern nations, encourage every thing that contributed to the gratification of the senses. And we find, during this early period, from the accounts which the prophets Ezekiel and Daniel have transmitted to us, that the most vivid colours were displayed to the sight, in their vestments and paintings, and the most grateful and flattering sounds conveyed to the ear, by means of voices and instruments.

There are two instances in Ezekiel of *painting* having made some progress among the Chaldeans, before Greece was rendered illustrious by the works of any great master in that art. Chap. iv. 1. we have the following passage: "Thou also, son of man, take thee a tile, and lay it before thee, and *pourtray* upon it the city Jerusalem." And chap. xxiii. 14. the same prophet in accusing his nation of inconstancy in religion, says: "For when she saw *men pourtrayed upon a wall*, the images of the Chaldeans pourtrayed with vermillion, girded with girdles upon their loins, exceeding in dyed attire upon their heads; all of them princes to look to, after the manner of the Babylonians of Chaldea, the land of their nativity: she doated upon them".— B. C. 595.

(1) Psalm cxxxvii.

A well known passage in Daniel puts it likewise out of all doubt that *music* was cultivated, and brought to a considerable degree of perfection among them, if we may judge by the number and variety of the instruments mentioned in it, of which the names of two occur now, for the first time, in the sacred writings.

“Nebuchadnezzar the king made an image of gold, whose height was threescore cubits, and the breadth thereof six cubits—Then an herald cried aloud, To you it is commanded, O people, nations, and languages, that at what time ye hear the sound of the cornet, flute, harp, *facbut*, psaltery, *dulcimer* (*m*), and all kinds of music, ye fall down and worship the golden image which Nebuchadnezzar the king hath set up.” Dan. ch. iii.

But to return to the unfortunate Hebrews:—At the end of the captivity, 536 B. C. an effort was made, by permission of Cyrus, to rebuild the temple, restore it to its former grandeur, and to re-establish its worship upon the ancient footing. But when the number of “the singers, the children of Asaph,” was taken, it amounted to no more than a hundred and twenty-eight, and with their assistants, out of fifty thousand people, they could only muster “two hundred singing men and singing women;” among which the instrumental performers must have been included, as no mention is made of them among the other Levites and servants of the temple.

Indeed, though the Jews from this period, till the destruction of the Temple by Titus Vespasian, and their total dispersion, continued to be a distinct nation, they were not only tributary, by turns, to the Persians, the Egyptians, the

(*m*) So various have been the conjectures of commentators concerning the *facbut* and *psaltery*, as they are called in the English version, that scarce any instruments have ever been heard of that have not furnished names for them. These learned

expounders seem to advance opinions merely to confute them; and after carrying the reader into a sea of trouble, leave him without fail or rudder, to get out as well as he can.

Syrians, and the Romans, but incessantly torn by intestine sects and factions, whose inveterate rancour never subsided in the midst of the most imminent dangers from a common and foreign foe; a calamity peculiar to this wretched people! who thus contributed more to their own destruction, than all the efforts of their most determined and powerful enemies.

Though there is no condition so abject, or bodily labour so oppressive to the spirits, if the mind is undisturbed, but music will burst through, and soothe; yet it is not among the turbulent and unhappy that we must seek the arts of peace, and consequences of that contentment, which arises from public and private felicity.

During the civil wars of Rome, no science was improved but that of destruction: and at home, in more modern times, during the struggles of York and Lancaster, and of the royalists and republicans, or the religious massacres of France, what else was in meditation, but rapine, rage, revenge, and slaughter! But, the temple of Janus once shut, what strides did not mankind make towards that degree of perfection of which they are capable, in the reigns of Augustus, of Leo the tenth, of Louis the fourteenth, and of our own Charles the second! Nay, keep but the enemy at a distance, with union at home, and even war will not stop the progress of the human mind; since the brightest constellation of men of genius, that ever enlightened our own country, confessedly appeared in the reign of queen Anne, when we supported with dignity, a long and glorious war on the continent.

A few words will suffice to remind the reader of the deplorable situation of the Jews, when they had lost their liberty and independence.

After remaining seventy years at Babylon, in a state of slavery, at the expiration of that time, though Cyrus, the Persian monarch, treated them with mildness, suffered them to return to their native country, and even contributed himself towards

wards the rebuilding of their city and temple, yet they continued a tributary province to that empire, till the year 320 B. C. when the city was taken and plundered by Ptolemy, one of Alexander's captains, who carried captive into Egypt a hundred thousand of its inhabitants. From that time, till 170, they continued to be oppressed and plundered by the kings of Egypt and Syria by turns, when Antiochus Epiphanes, the sovereign of Syria, took the city by storm, stripped the temple, and slaughtered upwards of forty thousand people, and sold as many more for slaves.

Soon after this period the brave family of the Maccabees began to exert uncommon prowess and abilities in attempts to recover their country's long lost independency; but the powers with which they had to contend were so superior in strength and resources, that nothing but a constant succession of miraculous efforts, and unexpected events, could keep the conflict alive, and protract their misery, merely by postponing destruction, more than a hundred years. At length, this heroic family, still more distressed and persecuted by their own countrymen, than by the common enemy, sunk under the pressure of accumulated woes; when the Jews, seeing the extensive power of the Romans over almost every part of the globe then known, called in Pompey to their assistance, against Antiochus; who, after draining their public treasures and private purses, by the bribes and contributions, which he extorted from them, became their open foe; and in the year 63 B. C. besieged and took Jerusalem, which, with all Judæa, remained ever after dependent on the tyranny and oppression of the Roman government.

For more than twenty years after this event, the Jews were under the jurisdiction of the Roman governors of Syria and Egypt; but, in the year 40 B. C. Herod, by taking a journey to Rome, and by flattering and bribing Mark Anthony, during the triumvirate, had the address to acquire from the Roman senate the nominal dignity of king of the Jews. His long reign

was

was one continued tissue of crimes that are shocking to humanity; the least of which was stripping his people of all their most valuable possessions, to satiate the inordinate rapacity of his tyrant masters at home. But Herod, finding money insufficient for this purpose, had recourse to a species of adulation and flattery, unknown before in his own country: for, in the year 26 B. C. in order to ingratiate himself with Augustus, he instituted *public games*, in honour of that emperor, after the Pagan manner; a measure so repugnant to the Mosaic laws, and customs of the Jews, that, instead of affording them pleasure, they were regarded with the utmost horror and detestation.

We have an account in Josephus both of these games and others, instituted by this prince, seven years before the nativity, but in so slight and imperfect a manner, that all we can learn is, that besides wrestlers, gladiators, wild beasts, &c. the most skilful musicians were invited from all parts of the world to perform at them. However, as these exhibitions were manifestly in imitation of the public games of Greece, it is natural to suppose that the musicians were chiefly from that country, and from Alexandria, in Egypt, where arts and sciences were then much cultivated and cherished, by the Ptolemies. The Jewish musicians, who were all among the priesthood, certainly could not, nor would, assist at these contests: so that whatever glory may have been derived to the victors, the Jews were intitled to no share of it, neither as a nation, nor as individuals. Indeed little could be acquired by conquests, to which no native of Judæa could aspire, without offending against the religion, laws, usages, and public opinion, of his country.

The sequel of the Jewish history from this period, to the total dispersion of the nation, seventy-three years after the birth of our Saviour, is too generally known to render the extension of this summary necessary. And with respect to music, the particular

ticular subject of my enquiries, the little mention made of it in the New Testament is but just sufficient to authorize its use in the church, where its establishment and progress will be traced hereafter. I should therefore terminate the account of ancient Hebrew music in this place, but that it seems necessary to add a few remarks upon some passages in the book of Job, of which the chronology is so doubtful, that I was unable to determine where, in the course of my narrative, to give them a place.

This venerable book has been supposed by many of the fathers to be the production of Moses: by some it is called the most ancient book in the world; the first Arabian regular history; the oldest poetical composition, in a dramatic form: and as to the time when Job flourished, great pains have been taken to shew the probability of its being but little later than that of Abraham. The language too in which it was originally written has given birth to many different opinions: whether Syriac, Chaldaic, Hebrew, or Egyptian. But the bishop of Gloucester is of opinion that it was the work of Ezra (*m*). Now as the Bible chronology places Job 1520 years before Christ, and Ezra but 457, this opinion occasions a difference of near eleven hundred years: however, the prophet Ezekial chap. 14. mentions Job twice, after Noah and Daniel (*n*); and chronologers fix the time when Ezekiel flourished, near one hundred and fifty years before Ezra.

However doubtful it may be who was the author of the book of Job, or when it was written, it is very certain that music is frequently mentioned in it, as an art in general use.

“ They send forth their little ones like a flock, and their children dance; they take the timbrel and harp, and rejoice at the sound of the organ,” 21. 11. “ My harp also is tuned to

(*m*) See Div. Leg. v. 2.

(*n*) “ Though these three men, Noah, Daniel and Job were in it [the land,] they

should deliver but their own souls, by their righteousness, saith the Lord God.”

mourning,

mourning, and my organ unto the voice of them that weep."

30, 31. (o)

This seems to allude to funeral music: and of the use that was made of music at the funerals of the Jews, we have a proof in Matthew, ix. 23. "While he spake these things unto them, there came a certain ruler, and worshipped him, saying, My daughter is even now dead; but come and lay thy hand on her, and she shall live.—And when Jesus came into the ruler's house, and saw the *minstrels* (p) and the people making a noise, he said unto them, Give place, for the maid is not dead, but sleepeth."

Besides the use of flutes in funeral ceremonies, a female was hired to weep, whence the title of chief mourner. The rabbin Maimonides tells us, c. 14. sect. 23. that "The husband, upon the death of a wife, was obliged to provide mourners to weep at her funeral, according to the custom of the country.—That the poorest persons among the Israelites, never engaged less than two flutes and one mourner; and, if rich, the expence and pomp of the ceremony were proportioned to the dignity of the husband." This account is confirmed by the Talmud, which orders that "The poorest among the Israelites should never at the funeral of a wife engage less than two flutes and one mourner." (q)

Josephus tells us that the pomp and expence of funerals among the Jews were carried to a ruinous excess, l. iii. c. 9. The number of flute players who led the processions amounting sometimes to several hundred: and guests were invited,

(o) One circumstance is necessary to be remembered with respect to the word *organ*, used here, and frequently in the Psalms, which is, that the term was taken from the Greek translation; but the ancient Greeks had no particular musical instrument called an *organ*, for *ὄργανον*, with them, was a general name for an *instrument*, a *work*, or an *implement* of any kind: hence *ὄργανον*, *instrumental*; *ὄργανον*,

νομοποιός, an *instrument maker*; and *ὄργανον*, the *fabrication of an instrument*. And, in all the Greek musical theorists, *organical* is a general term applied to *instrumental music*.

(p) Heb. *Vulg.* Syr. Arab. *Tibicines*. Perfic. *flentes*. Æthiopic. *Lamentatrices*.

(q) In *Chethubboth*, cap. 4. sect. 6. *apud Spencer*.

not only among their relations, but friends and neighbours, for thirty days successively, in order to attend these solemnities.

As early even as the death of Jacob, funeral rites were splendid and of long duration. His son Joseph, "With all his brethren, with all the servants of Pharaoh, and all the elders of the land of Egypt, attended this funeral, which lasted, with a great and very fore lamentation, for seven days." Gen. L. And we find, that the Egyptians mourned for this patriarch threescore and ten days.

The *nenia*, or song, which David composed on the death of Saul and Jonathan, is imagined by the commentators to have been sung at the funeral of those princes.

Thus, at the decease of Josiah, "All Judah and Jerusalem mourned for Josiah. And Jeremiah lamented for Josiah, and all the singing men and singing women spake of Josiah in their lamentations unto this day, and made them an ordinance in Israel." (r)

All that has hitherto been collected relative to the music of the Hebrews, only shews that it was in general use among them, from the time of their quitting Egypt, till they ceased to be a nation; but what kind of music it was with which they were so much delighted, no means are now left to determine. That they had their first music and instruments, whatever they were, from the Egyptians, appears to admit of no doubt; but these seemed to have remained in a very rude state till the reigns of David and Solomon, when, perhaps, they were more improved in quantity than quality; for the great number of Levites, of singing men and singing women, as well as of trumpets, shawms, cornets, sacbuts, cymbals and timbrels, could only augment the noisy cry of joy, or the clamour of petition.

As the Hebrew language had originally no vowels, it must have been very unfavourable to music: and after the introduction of vowel points, the many strong asperates used instead of

(r) 2 Chron. xxxv. 24.

the clear and open vowels of other languages, must have corrupted sound, which, by the difficulty of producing it from such harsh words, would, of necessity, be very coarse and noisy. The music of the ancient Hebrews must, therefore, have been rough, not only from their language, but musical instruments, chiefly of percussion; from the number of performers, amounting by the order of David to four thousand, and, according to Josephus, at the dedication of Solomon's temple, to two hundred thousand; and, from the manner of singing at present in the synagogues, of which the chorus is composed of clamour and jargon. These circumstances must, therefore, have escaped those who have highly extolled the ancient Hebrew music, or they must have been utterly ignorant of the art of singing.

However, we have no authentic account of any nation, except the Egyptians, where music had been cultivated so early as the days of David and Solomon, the brightest period of the Jewish history, the Greeks at that time having hardly invented their rudest instruments: for Homer and Hesiod, the refiners, if not the inventors, of Greek poetry; and Orpheus, Musæus, and Linus, to whom they attribute the invention of their music and instruments, all flourished after these Hebrew monarchs.

Basnage says "the Jews had nothing to distinguish them from other nations: they wholly applied themselves to till the ground, and feed their flocks; but neglected the study of arts and sciences. Whereas the Egyptians, under whose bondage they groaned, had wit, learning, and ingenuity, and pretended to an origin of much higher antiquity (r)." But this writer should have excepted music. Sculpture and painting were, indeed, utterly precluded by the Mosaic law, which was so rigid against that idolatry, to which all other nations were then addicted. But it was, perhaps, by this idolatry, and by the fre-

(r) *Hist. des Juifs*, l. i. c. i.

quent

quent representations of those divinities, with which the temples and houses of the Greeks were filled, that they acquired their excellence in those arts.

Neither the ancient Jews, nor the modern, have ever had characters peculiar to music; so that the melodies used in their religious ceremonies, have, at all times been traditional, and at the mercy of the fingers. The Canonico Cavalca is, however, of opinion, that the points of the Hebrew language were at first musical characters: and this conjecture has been confirmed by a learned Jew, whom I have consulted on that subject, who says, that the points still serve two purposes: in reading the prophets they merely mark accentuation, but, in singing them, they regulate the melody, not only as to long and short, but high and low notes.

With respect to the modern Jewish music, I have been informed by a Hebrew high priest, that all instrumental, and even vocal performances, have been banished the synagogue ever since the destruction of Jerusalem: that the little singing now used there, is an innovation, and a modern licence; for the Jews, from a passage in one of the prophets, think it unlawful, or at least unfit, to sing or rejoice before the coming of the Messiah, till when they are bound to mourn and repent in silence: but the only Jews now on the globe, who have a regular musical establishment in their synagogue, are the Germans, who sing in parts; and these preserve some old melodies, or species of chants, which are thought to be very ancient. At Prague they have an organ. The same priest says that, being at Petersburg some years since, the grand caliph of Persia was there likewise on an embassy, and had the service of his religion regularly performed in a kind of mosque fitted up in the Czar's palace for his use. That when he first heard this service performed, he found the singing so like that in the German synagogues, that he thought it had been done in derision of the Jews, and on that

account soon left it. But, upon enquiry, finding it to be nothing more than the manner of singing common in Persia, he concluded that the Persians had borrowed this kind of chant from the ancient Oriental Jews. At present, he says, they sing it first single, and then add parts to it, in a kind of chorus, like the German Jews.

Padre Martini has inserted from the *Estro-Poetico-Armonico* of Marcello, 1724, and from an inedited MS. by the cavaglier Ercole Bottrigari, called *Il Trimerone de' Fondamenti Armonici*, 1599, a great number of such Hebrew chants as were sung in the synagogues of different parts of Europe, at the time when these works were composed. But as no two Jewish congregations sing these chants alike, if tradition has been faithful in handing them down from the ancient Hebrews to any one synagogue, who shall determine to which such permanence can be attributed?

I shall, however, select a few of them to gratify the curiosity of my readers, without a hope of their being either edified or delighted by such music. The notes are to be read from right to left, after the manner of the Hebrew language; and in those chants which are printed in Gregorian notes, it is to be observed, that the square characters are long, and those in the lozenge form, short.

*Of Music in Greece during the Residence of Pagan Divinities,
of the first Order, upon Earth.*

THERE are no human transactions upon record, however ancient, in which a love for music does not appear. For, as the first musicians were also poets, philosophers, and historians, no fragments of ancient poetry, philosophy, or history, can be found, without some vestiges of the passion which mankind had for music, at the time when they were written.

It is well known, that the origin of every people, empire, and kingdom, in prophane history, is involved in darkness, which no human light can penetrate : so that the fables which national vanity has given birth to, and the poetical fictions with which they have been embellished, are all the materials which high antiquity has left us to work upon.

However, as the fables of ancient historians, and the wild imaginations of mythologists, have employed the sagacity of
the

the wisest and most respectable writers of modern times, to digest into system, and to construe into something rational and probable, I shall not wholly neglect them, but, with the assistance of such guides, shall travel through the dark labyrinth of remote antiquity, with all possible expedition.

It has already been observed (*a*), that the Theogony of the Egyptians is, in some measure, connected with my subject: and that of the Greeks, from their passion for arts and sciences in general, will appear to be still more so; for there are very few of their divinities who have not been regarded as inventors, or protectors of music (*b*). But as Herodotus, Diodorus Siculus, Cicero, and many other of the most venerable writers of antiquity, have spoken of these divinities as mere human beings, who, having while they resided on earth either taught mankind the necessary arts of life, or done them some other important service, were deified after death, and regarded as protectors of those arts which they had invented when living, as well as of their professors, I shall likewise venture to humanize them (*c*): and if they are only supposed to have been powerful and benign terrestrial princes, we may strip their history of the marvellous, and find mankind under their reigns, emerging from ignorance and barbarism by natural and slow degrees, in much the same manner, and without the interpo-

(*a*) See p. 207.

(*b*) The bestowing these inventions upon their divinities by the Pagans, is abundantly sufficient, says the bishop of Gloucester, to prove their high antiquity; for the ancients gave nothing to the Gods, of whose original they had any records: but where the memory of the invention was lost, as of seed-corn, wine, writing, music, &c. then the gods seized the property, by that kind of right, which gives strays to the lord of the manor. *Div. Leg.* vol. iii.

(*c*) Pope has admirably described the origin of these first deifications.

'Twas virtue only, or in arts or arms,
Diffusing blessings, or averting harms,
The same which in a fire the sons obey'd,
A prince the father of a people made.—
On him, their second providence, they
hung,
Their law his eye, their oracle his tongue.
He from the wond'ring furrow call'd the
food,
Taught to command the fire, controul the
flood,
Draw forth the monsters of th' abyss profound,
Or fetch th' aerial eagle to the ground.
Essay on Man, Ep. iii.

fition

fiction of miraculous assistance, as every other people have since done, who have arrived at wealth and power, and have afterwards had leisure to attend to luxury and refinement.

Diodorus Siculus tells us, that according to the mythology of the Cretans, most of the Gods of the Greeks were born upon their island, especially those that have acquired divine honours *by the benefits they have conferred on mankind*: however, as to the existence of these personages, the whole is doubtful now. New systems of mythology are but a series of new conjectures, as difficult to ascertain and believe as the old legends. And as these legends have been long received by the wisest men, and greatest writers of antiquity, and are at least as probable as the hypotheses of modern mythologists, I shall adhere to them, not only as being more amusing and ingenious than fancied analogies and etymologies drawn from Phœnician and Hebrew roots by Bochart, the Abbé de la Pluche, and others; but, because the minds of most readers will have accommodated themselves by long habit to classic opinions, imbibed during their tender years of education and credulity (*d*).

(*d*) The bishop of Gloucester has a passage so replete with wit, humour, and satire, that I shall make no apology for inserting it at full length. In speaking of *l'Histoire du Ciel* by de la Pluche, he asks, "on what, then, is this author's paradox supported? On the common foundation of most modern philologic systems, *etymologies*; which, like fungous excrescences, spring up from old Hebrew roots, mythologically cultivated. To be let into this new method of improving barren sense, we are to understand, that in the ancient Oriental tongues, the few *primitive* words must needs bear many different significations, and the numerous *derivatives* be infinitely equivocal. Hence any thing may be made of Greek proper names, by turning them to Oriental sounds, so as to suit every system, past, present, and to come. To render this familiar to the reader, by example, M. Pluche's system is, that the Gentile Gods came

from agriculture: all he wants, then, is to pick out, (consonant to the Greek proper names) Hebrew words which signify a *plow, tillage, or ears of corn*; and so his business is done. Another comes, let it be Fourmont, and he brings news that the Greek Gods were Moses or Abraham, and the same ductile sounds produce from the same primitive words, a *chief, a leader, or a true believer*; and then, to use his words, *Nier qu'il s'agisse ici du seul Abraham, c'est être aveugle d'esprit, & a'un aveuglement irremédiable.* A third and fourth appear upon the scene, suppose them Le Clerc and Banier; who, prompted by the learned Bochart, say that the Greek Gods were only *Phœnician voyagers*; and then, from the same ready sources, flow *navigation, ships, and negociators*; and when any one is at a loss in this game of crambo, which can never happen but by being duller than ordinary, the kindred dialects of the Chaldee and Arabic lie always ready to
make

Sir Isaac Newton tells us from Herodotus (e) that "the Phœnicians who came with Cadmus brought many doctrines into Greece; for amongst those Phœnicians were a sort of men called *Curetes*, who were skilled in the arts and sciences of Phœnicia, above other men, and (f) settled some in Phrygia, where they were called *Corybantes*; some in Crete, where they were called *Idæi daëtyli*; some in Rhodes, where they were called *Telchines*; some in Samothrace, where they were called *Cabiri*, &c.—And by the assistance of these artificers, Cadmus found out gold in the mountain Pangæus in Thrace, and copper at Thebes; whence copper ore is still called *Cadmia*. Where they settled they wrought first in copper, till iron was invented, and then in iron; and when they had made themselves armour, they danced in it at the sacrifices with tumult and clamour, and bells, and pipes, and drums, and swords, with which they struck upon

make up deficiencies. To give an instance of all this in the case of poor distressed Osiris, whom hostile critics have driven from his family and friends, and reduced to a mere vagabond upon earth, M. Pluche derives his name from *Ochofiserets*, *domaine de la Terre*; M. Fourmont from *Hofcheiri*, *habitant de Seir*, the dwelling of Esau, who is his Osiris. And Vossius from *Schicher*, or *Sior*, one of the Scripture names for the Nile. I have heard of an old humourist, and great dealer in etymologies, who boasted *That he not only knew whence words came, but whither they were going*. And indeed, on any system-maker's telling me his scheme, I will undertake to shew *whither all his old words are going*; for in strict propriety of speech, they cannot be said to be *coming from*, but *going to*, some old Hebrew root. There are certain follies, of which this seems to be in the number, whose ridicule strikes so strongly, that it is felt even by those who are most subject to commit them. Who that has read M. Huet's *Demonstratio Evangelica*, would have expected to have seen him satirise with so much spirit the very nonsense with which his own learned book abounds? *Le véritable usage de la con-*

noissance des langues étant perdu, l'abus y a succédé. On s'en est servi pour etymologiser: on veut trouver dans l'Hebreu et ses dialectes la source de tout les mots, et de toutes les langues, pour barbares et étrangères qu'elles puissent être. Se présente-t-il un nom de quelque roi d'Ecosse, ou de Norvege; on se met aux champs avec ses conjectures; on en va chercher l'origine dans la Palestine. A-t-on de la peine à l'y rencontrer? On passe en Babylone. Ne s'y trouve-t-il point; l'Arabie n'est pas loin: et en besoin même, on pousseroit jusqu'en Ethiopie, plutôt que de se trouver court d'etymologies; et l'on bat tant de pâis, qu'il est impossible enfin qu'on ne trouve un mot qui ait quelque convenance de lettres et de son avec celui, dont on cherche l'origine. Par cet art on trouve dans l'Hebreu ou ses dialectes, l'origine des noms du roi Artur, et de tous les chevaliers de la table ronde; de Charlemagne, et des douze pairs de France; et même en un besoin, de tous les Incas de Perou. Par cet art, un Allemand, que j'ai connu prouvoit que Priam avoit été le même qu'Abraham: et Æneas le même que Jonas." Lettre au Bochart. Div. Leg. book iv. sect. 4.

(e) *Lib. v. c. 58.*

(f) *Strabo, lib. x. p. 464, 465, 466.*

one

one another's armour, in musical times, appearing seized with a divine fury; and this is reckoned the original of music in Greece (g)."

"Clemens Alexandrinus calls the Idæi Dactyli, barbarous, that is strangers; and says, that they were reputed the first wise men, to whom both the letters which they call Ephesian, and the invention of musical *rhythms* are referred (h). It seems, that when the Phœnician letters, ascribed to Cadmus, were brought into Greece, they were at the same time brought into Phrygia and Crete, by the Curetes, who settled in those countries, and called them Ephesian, from the city Ephesus, where they were first taught." (i)

Cadmus is a name much celebrated by antiquity. According to Fabricius there were three persons so called, who flourished at very different periods. The eldest, and the most renowned, is Cadmus the son of Agenor, king of Phœnicia: the second, Cadmus Milesius, the historian; who, according to Moreri, lived about the time of the Trojan war. Pliny, in speaking of the invention of things, (k) tells us, that Pherecydes Syrus taught the composition of discourses in prose, during the reign of Cyrus; and Cadmus Milesius to write history. And, in another place, (l) he says that Cadmus Milesius was the first who wrote in prose.

The third Cadmus was likewise a Milesian, but, according to Suidas, much younger than the second. He was author of the History of Attica in sixteen books.

It is agreed upon by most of the ancients, that the first Cadmus, being sent by his father into Greece, in search of his

sister Europa, whom Jupiter had stolen away, brought with him sixteen letters, and the art of making brass (*m*). Archbishop Usher, the authors of the *Universal History*, and Dr. Blair agree in placing this event in the time of Joshua, that is, 1450 years before Christ; though sir Isaac Newton and Dr. Priestley allow Cadmus to have flourished but 1045 years before the Christian Æra. Sir Isaac imagines that the emigration of the Phœnicians and Syrians was occasioned by the conquests of David, "These people, says he, (*n*) fleeing from Zidon and from David, come under the conduct of Cadmus, and other captains, into Asia Minor, Crete, Greece, and Lybia, and introduce letters, music, poetry, metals and their fabrication, and other arts, sciences and customs of the Phœnicians. This happened about one hundred and forty years before the Trojan War. It was about the sixteenth year of David's reign that Cadmus fled from Zidon. At his first coming into Greece, he sailed to Rhodes, and thence to Samothrace, an island near Thrace, on the north side of Lemnos, and there married Harmonia, the sister of Iasius and Dardanus, which gave occasion to the Samothracian mysteries." (*o*)

I shall not enter upon a long discussion concerning Harmonia, of whom, though many ancient authors make her a princess, of divine origin (*p*), there is a passage in Athenæus from Euhemerus, the Vanini of his time, which tells us, that she was by profession, *a player on the flute*, and in the service of the prince of Zidon, previous to her departure with Cadmus. This circumstance, however, might encourage a belief, that, as Cadmus brought letters into Greece, his wife brought *harmony* thither, as the word ἀρμονία, *harmonia*, has been said to have no other derivation than from her name; which makes it very

(*m*) Tacit. l. ii. c. 14. and Plin. vii. 56.

(*p*) According to Diod. Sic. l. 5. she was daughter of Jupiter and Electra, and grand-daughter of Atlas.

difficult

difficult to ascertain the sense annexed to it by the Greeks in their music; for it has no roots by which it can be decomposed, in order to deduce from them its etymology (*q*).

Diodorus Siculus (*r*), has given a very circumstantial account of the wedding of Cadmus and Harmonia in Samothrace, at which all the pagan divinities were present; and tells us, that this was the first hymenæal festival which the gods deigned to honour with their presence. "Ceres, who was tenderly attached to Jasion, the brother of the bride, presented corn to the new married couple; Mercury, brought his lyre; Minerva, her famous buckler, her veil, and her flute; Electra, the mother of the bride, celebrated there the mysteries of Cybele, the mother of the gods, and had the orgies danced to the sounds of drums and tymbals. Apollo afterwards played on the lyre, the Muses accompanied him with their flutes, and all the other divinities ratified their nuptials with acclamations of joy." This seems to be the outline of a dramatic representation, which was perhaps exhibited by the priests at some festival, or mystical celebration, in order to commemorate the wedding of Cadmus and Harmonia.

No ancient authors dispute letters and arts having been brought out of Phœnicia by Cadmus, and the Idæi Dactyli; but Diodorus is not of opinion that Cadmus invented the letters which he brought into Greece, or that the Grecians had no letters before his arrival. He rather supposes that Cadmus introduced a new

(*q*) The common account of the word, however, that is given by lexicographers, and generally adopted by the learned, does not confirm this opinion. The word is generally derived, in dictionaries, from ἀρμολύω, and this from the old verb ἄρσω, *apto*, to fit, to join. And yet as the flute upon which Harmonia played was a single instrument, capable of *melody only*, and as she was said to be the first who performed upon that instrument in Greece, the inhabitants of that country perhaps called by her name the art which she had introduced

among them, as the metal which her husband invented received his name. Agenor, the father of Cadmus, was an Egyptian; and Cadmus is said by many ancient writers to have received his education in Egypt. Harmonia may likewise have come from that country; however, her wild flute has never been said to have furnished the Greeks with their musical scale; but there is nothing more extraordinary in a barbarous people having music *without a gamut*, than language *without an alphabet*.

(*r*) *Lib. v.*

alphabet amongst them, which they prefixed to the ancient Pelasgian characters that had been in use long before. However that may have been, many great inventions are attributed to the people of Phœnicia, a province of Syria best known in the Hebrew authors of Scripture by the name of Canaan. Bochart, with incredible labour, has endeavoured to prove, that they have sent colonies, and left vestiges of their language, in almost all the islands of the Mediterranean. They first opened the commerce of the British isles. Some moderns, indeed, give this honour to the Greeks; but, besides the uncertainty of the Greeks ever having been there, Strabo says, in express terms, that the Phœnicians began this trade, and carried it on alone, without rivals, which destroys all conjecture to the contrary.

The Phœnicians were successively under the Assyrians, Chaldeans, Persians, Greeks, and Romans. Their principal cities were Sidon, Tyre, Ptolemaidas, Ecdippas, Sareptus, Berythia, Biblis, Tripoli, &c. Carthage was a Phœnician colony.

Lucan (s) has celebrated their invention of letters in verses that have been often translated and paraphrased.

*Phœnices primi, famæ si creditur, ausi
Mensuram rudibus vocem signare figuris.*

Phœnicians first, if ancient fame be true,
The sacred mystery of letters knew;
They first by sound in various lines design'd,
Express'd the meaning of the thinking mind;
The power of words by figures rude convey'd,
And useful science everlasting made. ROWE.

*C'est de lui (t) que nous vient cet art ingénieux,
De peindre la parole et de parler aux yeux,
Et par les traits divers de figures tracées,
Donner de la couleur, et du corps aux pensées.*

BREBEUF.

(s) Lib. iii.

(t) Cadmus.

The noble art from Cadmus took its rise,
 Of painting words, and speaking to the eyes :
 He first in wond'rous magic fetters bound
 The airy voice, and stopt the flying sound ;
 The various figures by his pencil wrought,
 Gave colour and a body to the thought.

Hon. Miss MOLESWORTH.

We know but little, however, of the Phœnicians, except from the Theogony and Cosmogony of Sanconiatho, a priest of Berytha, who is supposed to have flourished before the Trojan war ; works that are come down to us very imperfectly, in a translation interpolated by Philo Biblos. It is to Eusebius that we are indebted for this fragment ; the learned are much divided as to its authenticity. Dr. Dodwell endeavoured to prove the whole of this work to be supposititious ; but many writers of eminence are of a contrary opinion, particularly Dr. Cumberland, bishop of Peterborough, who has built an hypothesis upon the writings attributed to Sanconiatho.

Cadmus appears to have been cotemporary with the Cretan Jupiter, from the fable, which makes him carry away his sister Europa from Sidon, in the shape of a bull, by which the expounders of ancient mythology understand the ensign of the ship in which they sailed together. The Phœnicians, upon their first coming into Greece, gave the name of *Jao-pater*, Jupiter, to every king, as every Egyptian monarch was called Pharaoh, and Roman emperor, Cæsar ; and thus both Minos and his father were Jupiters. But though Cadmus and his companions were called *Idæi Daëtyli*, and *Curetes*, they seem not to have been the first who came into Greece ; for both Strabo and Diodorus Siculus tell us, that “ the *Curetes*, who introduced music, poetry, dancing, and arts, and attended on the sacrifices, were no less active about religious institutions ; and for their skill, knowledge, and mystical practices, were accounted wise men and conjurers by the vulgar ; that these,

when

when Jupiter was born, in Crete, were appointed by his mother Rhea, to the nursing and tuition of him in a cave of mount Ida, where they danced about him in armour, with great noise, that his father Saturn might not hear him cry (*u*). And when he was grown up, these assisted him in his conquests, were appointed his priests, and instituted mysteries, in memory of the share which they had in his education."

This wild story, collected from all the best prose writers of Greece, is told by Sir Isaac Newton in his *Chronology*. It served his purpose, in support of his chronological hypothesis; and it is quoted here, in order to shew the simple state which music was in at its first introduction into Greece. No instruments are mentioned to have been used by the Idæi Dactyli, who attended Jupiter in Crete, but drums and cymbals, instruments of percussion, which affording but one tone, require little art in the player, or knowledge in the hearer (*x*).

These represent the armed priests, who strove
To drown the tender cries of infant Jove;
By dancing quick they made a greater sound,
And beat their armour, as they danc'd around. CREECH.

But Virgil applies this rude and artless music to a less noble purpose than quieting the infant Jupiter in his cradle (*y*).

Now listen, while the wond'rous powers I sing,
And genius giv'n to bees, by Heav'n's almighty king,
Whom, in the Cretan cave, they kindly fed,
By cymbal's sound, and clashing armour led. WARTON.

(*u*) There is something so peculiarly disgusting in the quarrels between Jupiter and his father, that I have purposely refrained from mentioning them.

(*x*) *Diætos referunt curetas: qui Jovis illum*
Vagitum in Creta quondam occultasse feruntur;
Cum pueri circum puerum pernice chorea

Armati in numerum pulsarent æribus æra.
Lucret. l. ii. v. 633.

(*y*) *Nunc age, naturas apibus quas Jupiter ipse*

Addidit, expediam: pro qua mercede, canoros
Curetum sonitus crepitantiaque æra secutæ,
Diæto cæli regem pavere sub antro.
Georg. l. iv. v. 149.

Aristotle

Aristotle has thought it worth recording, that Archytas of Tarentum, the famous mathematician, invented a rattle for children; and Perrault says, if we consider the music of the ancients according to the idea which the early writers give us of it, we shall find it to have been a kind of noise suitable to the *infancy* of the world, as the first instruments were certainly little better than rattles, or corals, fit only for children.

And, indeed, the Phœnicians may be said to have brought into Greece *time*, rather than *tune*; but *rhythm* is of such consequence both to poetry and to music, that this was no inconsiderable present.

As the first music mentioned in the Grecian history, is that of the *Idæi Dætyli*, after the birth of Jupiter, which consisted of a rhythmical clash of swords, as modern morice-dancers delight in the clash of staves; it is not unnatural to suppose, when this prince was grown up, had conquered his enemies, and was peaceably established on his throne, that arts and sciences were cultivated and rendered flourishing, particularly music, through the skill and influence of Apollo, and his other sons; and this perhaps was found to be the most effectual means of taming and polishing a rude and savage people.

MINERVA.

Among the *dii majorum gentium*, some of the female divinities laid claim to a share in musical discoveries. Of this number was Minerva, or Pallas, the daughter of Jupiter, who is sometimes called *Musica*, or the musician, a name she acquired from her statue made by Demetrius, in which, when the serpents of the Gorgon were struck, they resounded like a lute (z). She is also honoured with the invention of chariots, together with having first used trumpets, and invented the flute (a). The vouchers for her

(z) Banier, tom. ii. p. 308.

(a) Ib. 309.

musical talents are Pausanias, Plutarch, and Fulgentius, among the prose writers; and Pindar, Nonnus, Dionys. Ovid, Hyginus, Propertius, and Claudian, among the poets. The flute that she invented, is said by Ovid to have been made of box (*b*), and by Hyginus of bone (*c*).

Foramina rara, with few holes, it is natural to suppose. Indeed the syrinx, see plate IV, No. 11. said to have been invented by Pan, was found inconvenient. It consisted of a number of pipes of different lengths, tied together, or fastened by wax, which were played on, according to Lucretius (*d*), by blowing in them one after the other, moving the instrument sideways, for the admission of wind into the several tubes; and it was to the sagacity and penetration of Minerva, that it was found practicable to produce the same variety of tones with a single pipe, by means of ventiges or holes, which had the effect of lengthening or shortening the tube, by a quick alteration of the column of air which was forced through it.

Two other circumstances are related of Minerva with respect to the flute; she is said by Hyginus to have found herself laughed at by her mother and sister, Juno and Venus, whenever she played the flute in their presence: this suggested to her the thought of examining herself in a fountain, which serving as a mirror, convinced her that she had been justly derided for the distortion of her countenance, occasioned by swelling her cheeks in the act of blowing the flute. This is one reason given for her throwing aside that instrument, and adopting the lyre. (*e*) However, a better cause, and one more worthy of her wisdom, is assigned for her throwing aside the flute, upon seeing Apollo playing on the lyre; for by having

his mouth at liberty, she found that it enabled him to sing at the same time as he played, which afforded him an opportunity of joining instruction to pleasure.

There is nothing improbable or puerile in these accounts. Indeed many of the ancient fables and allegories are so ingenious, and conceal so delicate a moral, that it would discover a taste truly Gothic and barbarous, to condemn, or reject them. Of such as these must our history consist, during the dark ages of antiquity, which furnish few authentic materials: indeed, we have as yet no other records to consult, than those of poets and mythologists.

Having traced the use of instruments of percussion as high as the birth of Jupiter, and shewn that the ancient Greeks attributed the origin of wind instruments to Minerva, it now remains to speak of the third species of instruments, the tones of which are produced by strings; and among these, the first in order and celebrity is the lyre, of which the invention is given, both by the Egyptians and Greeks, to Mercury. Of the Egyptian Mercury ample mention has been already made, in speaking of the music of that country: it now remains to give some account of the Hermes of Greece.

MERCURY.

Most of the actions and inventions of the Egyptian Mercury have likewise been ascribed to the Grecian, who was said to be the son of Jupiter and Maia, the daughter of Atlas. No one of all the heathen divinities had so many functions allotted to him as this God: he had constant employment both day and night, having been the common minister and messenger of the whole Pantheon, particularly of his father, Jupiter, whom he served with indefatigable labour, and sometimes, indeed, in a capacity of no very honourable kind. Lucian is very pleasant upon the multitude of his avocations; and, according to the

confession of the emperor Julian, Mercury was no hero, but rather one who inspired mankind with wit, learning, and the ornamental arts of life, than with courage (*c*). The pious emperor, however, omits some of his attributes; for this God was not only the patron of trade, but also of theft and fraud.

Amphion is said, by Pausanias (*d*), to have been the first that erected an altar to this God, who, in return, invested him with such extraordinary powers of music (and masonry), as to enable him to fortify the city of Thebes in Bœotia, by the mere sound of his lyre.

Horace gives us the best part of his character (*e*).

Thou god of wit, from Atlas sprung,
Who by persuasive power of tongue,
And graceful exercise, refin'd
The savage race of human kind,
Hail! winged messenger of Jove,
And all th' immortal pow'r's above.
Sweet parent of the bending lyre,
Thy praise shall all its sounds inspire.

Artful and cunning to conceal
Whate'er in sportive theft you steal,
When from the God who gilds the pole,
E'en yet a boy, his herds you stole;
With angry voice the threat'ning pow'r
Bad thee thy fraudulent prey restore,
But of his quiver too beguil'd,
Pleas'd with the theft, Apollo smil'd.

You were the wealthy Priam's guide,
When safe from Agamemnon's pride,
Through hostile camps, which round him spread
Their watchful fires, his way he sped.

(*c*) Ἐργὸς δὲ τὰ συνετώτερα μᾶλλον, ἢ τὰ ληϊώτερα. *Ap. S. Cyril. Cont. Jul.*

(*d*) *Lib. ix. cap. 5.*

(*e*) *Od. x. lib. 1. Mercuri, facunde nepos Atlantis, &c.*

Unspotted spirits you consign
 To blissful seats and joys divine,
 And, powerful with thy golden wand,
 The light, unbodied crowd command ;
 Thus grateful does thy office prove
 To Gods below, and Gods above. FRANCIS.

This Ode contains the substance of a very long hymn to Mercury, attributed to Homer. Almost all the ancient poets relate the manner in which the Grecian Mercury discovered the lyre ; and tell us that it was an instrument with *seven strings* ; a circumstance which makes it essentially different from that said to have been invented by the Egyptian Mercury, which had but *three*. However there have been many claimants besides Mercury to the *seven* stringed lyre, of which there will be occasion to speak hereafter ; all that seems necessary to be added here is, that the great number of different musicians, to whom the same inventions have been given in Greece, is but a proof that instruments resembling each other in form and properties, may have had many inventors. A *fyrinx*, or *fistula panis*, made of reeds tied together, exactly resembling that of the ancients, has been lately found to be in common use in the island of New Amsterdam, in the South Seas, as flutes and drums have been in Otaheite and New Zealand ; which indisputably prove them to be instruments natural to every people emerging from barbarism. They were first used by the Egyptians and Greeks, during the infancy of the musical art among them ; and they seem to have been invented and practised at all times by nations remote from each other, and between whom it is hardly possible that there ever could have been the least intercourse or communication.

The Greeks, however, when they deified a prince or hero of their own country, usually had recourse to the Egyptian theogony for a name, and with it adopted all the actions, attributes,

and rites of the original, which they generously bestowed upon their new divinity. And not only the Greek and Roman poets, but historians, speak of their Mercury as the inventor of music and the lyre. Apollodorus, as related before, p. 209, is almost the only one who lays the scene of this transaction in Egypt.

Don Calmet, in his Dissertation on the Musical Instruments of the Hebrews, has given us an account of this discovery from Homer's hymn to Mercury, in which he translates Πληκτρον, *plectrum*, by the French word *archet*, a bow, without citing a single authority for it from ancient authors. What kind of implement the *plectrum* was, will be discussed hereafter; but it is most certain that the *bow* now in use, was utterly unknown to the ancients. Vincenzo Galilei (*f*) has collected the various opinions of the several Greek writers who have mentioned the invention of the *chelys* or *testudo*; and the late Mr. Spence has done the same in a very circumstantial, but ludicrous manner (*g*).

The most ancient representations of this instrument agree very well with the account of its invention: the lyre, in particular on the old celestial globes, was represented as made of the entire shell of a tortoise, and that of Amphion in the celebrated groupe of the Dirce, or *Toro*, in the Farnese palace at Rome,

(*f*) *Dial. della Musica Ant. e Mod.*

(*g*) "Horace talks of Mercury as a wonderful musician, and represents him with a lyre. There is a ridiculous old legend relating to this invention, which informs us that Mercury, after stealing some bulls from Apollo, retired to a secret grotto, which he used to frequent at the foot of a mountain, in Arcadia. Just as he was going in, he found a tortoise feeding at the entrance of his cave: he killed the poor creature, and, perhaps, eat the flesh of it; as he was diverting himself with the shell, he was mightily pleased with the noise it gave from its concave figure.

He had possibly been cunning enough to find out that a thong pulled strait and fastened at each end, when struck by the finger, made a sort of musical sound. However that was, he went immediately to work, and cut several thongs out of the hides he had lately stolen, and fastened them as tight as he could to the shell of this tortoise; and, in playing with them, made a new kind of music with them to divert himself in his retreat. This, considered only as an account of the first invention of the lyre, is not altogether so unnatural." *Polymet. Dial. viii.*

which

7

which is of exquisite Greek sculpture, and very high antiquity, is figured in the same manner. I had a front and side view of this lyre drawn under my own eye, and have since had them engraved for this work, Plate V. No. 1 and 2, in order to furnish the reader with an idea of the form given to the instrument by ancient sculptors, upon the strength of this legend.

APOLLO.

There is something pleasing in the idea of realizing, or even of finding the slightest foundation in history for the fables with which we have been amused in our youth. I believe there are few of my countrymen who have not, during childhood, read the Life of Robinson Crusoe, and the Adventures of Lemuel Gulliver, as authentic histories, and who have not relinquished that thought, in riper years, with some degree of reluctance. It has, doubtless, been the same with the ingenious fables of antiquity, so elegantly told, and embellished with all the flowers of poetry, and warm colouring of imagination.

Of all the divinities of Paganism, there was no one by whom the polite arts were said to have been, in so particular a manner, cherished and protected, as by Apollo. Cicero mentions four of his name, the most ancient of whom was the son of Vulcan; the second a son of Corybas, and born in Crete; the third an Arcadian, called Nomian, from his being a great legislator; and the last, to whom the greatest honour is ascribed, the son of Jupiter and Latona.

Apollo had a variety of other names, either derived from his principal attributes, or the chief places where he was worshipped. He was called the *Healer*, from his enlivening warmth and cheering influence; and *Pæan*, from the pestilential heats; to signify the former, the ancients placed the Graces in his right hand; and for the latter, a bow and arrows in his left: *Nomius*, or the shepherd, from his fertilizing the earth, and thence sustaining

taining the animal creation; *Delius*, from his rendering all things manifest; *Pythius*, from his victory over Python; *Lycias*, *Phæbus*, and *Phaneta*, from his purity and splendor. As Apollo is almost always confounded by the Greeks with the Sun, it is no wonder that he should be dignified with so many attributes. It was natural for the most glorious object in nature, whose influence is felt by all creation, and seen by every animated part of it, to be adored as the fountain of light, heat, and life.

The emperor Julian, in his defence of paganism, says, "It is not without cause that mankind have been impressed with a religious veneration for the sun and stars. As they must, at all times, have observed that no change ever happened in celestial things; that they were subjected neither to augmentation, nor diminution; and that their motion and laws were always equal and proportioned to their situation in the heavens. From this admirable order, therefore, men have reasonably concluded that the Sun itself was either a God, or the residence of some divinity." (h)

The power of healing diseases being chiefly given by the ancients to medicinal plants, and vegetable productions, it was natural to exalt into a divinity the visible cause of their growth. Hence he was styled the *God of physic*; and that external heat which cheers and invigorates all nature, being transferred from the human body to the mind, gave rise to the idea of all mental effervescence coming from this God; hence, likewise, poets, prophets, and musicians, are said to be *Numine afflati*, inspired by Apollo.

Whether Apollo was ever a real personage, or only the great luminary, many have doubted; indeed, Vossius (i) has taken great pains to prove this God to be only a metaphorical being, and that there never was any other Apollo than the sun: "he was styled the son of Jupiter, says this author, because that

(h) *Ap. S. Cyril. cont. Julian.*

(i) *De Orig. & Progress. Idol.*

God was reckoned by the ancients the author of the world. His mother was called *Latona*, a name which signifies *hidden*, because before the sun was created, all things were wrapped up in the obscurity of chaos. He is always represented as beardless and youthful, because the sun never grows old, or decays. And what else can his bow and arrows imply, but his piercing beams? And adds, that all the ceremonies which were performed to his honour, had a manifest relation to the great source of light, which he represented. Whence, he concludes, it is in vain to seek for any other divinity than the sun, which was adored under the name of Apollo."

However, though this is in general true, yet it does appear, from many passages in ancient authors, that there was some illustrious personage named Apollo, who, after his apotheosis, was taken for the sun; as Osiris and Orus in Egypt, whose existence cannot be called in question, were, after their death, confounded with the sun, of which they became the symbols, either from the glory and splendor of their reigns, or from a belief that their souls had taken up their residence in that luminary.

Of the four Apollos mentioned by Cicero, it appears that the three last were Greeks, and the first an Egyptian; who, according to Herodotus, was the son of Osiris and Isis, and called Orus. Pausanias is of the same opinion as Herodotus, and ranks Apollo among the Egyptian divinities. The testimony of Diodorus Siculus is still more express, for in speaking of Isis, after saying that she had invented the practice of medicine, he adds, that she taught this art to her son Orus, named Apollo, who was the last of the Gods that reigned in Egypt.

It is easy to trace almost all the Grecian fables and mythologies from Egypt. If the Apollo of the Greeks was said to be the son of Jupiter, it was because Orus, the Apollo of the Egyptians, had Osiris for his father, whom the Greeks confounded.

founded with Jupiter. If the Greek Apollo was reckoned the God of eloquence, music, medicine, and poetry, the reason was that Osiris, who was the symbol of the sun among the Egyptians, as well as his son Orus, had there taught those liberal arts. If the Greek Apollo was the God and conductor of the Muses, it was because Osiris carried with him in his expedition to the Indies singing women and musicians. This parallel might be carried on still further; but enough has been said to prove that the true Apollo was that of Egypt.

To the other perfections of this divinity the poets have added beauty, grace, and the art of captivating the ear and the heart, no less by the sweetness of his eloquence, than by the melodious sounds of his lyre. However, with all these accomplishments, he had not the talent of captivating the fair, with whose charms he was enamoured; but we have nothing to do with his amours, nor with the other adventures related of this God during his residence on earth, which are indeed too numerous, and too well known to be inserted here: however, such as concern his musical contests, in which he was always victorious, seem too much connected with our subject, to be wholly unnoticed.

To begin, therefore, with the dispute which he had with Pan, that was left to the arbitration of Midas.

Pan, who thought he excelled in playing the flute, offered to prove that it was an instrument superior to the lyre of Apollo. The challenge was accepted, and Midas, who was appointed the umpire in this contest, deciding in favour of Pan, was rewarded by Apollo, according to the poets, with the ears of an ass, for his stupidity. This fiction, which seems founded upon history, must be explained.

Midas, according to Pausanias, (k) was the son of Gordius and Cybele, and reigned in the Greater Phrygia, as we learn from Strabo (l). He was possessed of such great riches, and

(k) *In Atticis.*

(l) L. xiv. p. 680.

such an inordinate desire of increasing them by the most contemptible parsimony, that, according to the poets, he converted whatever he touched into gold. However, his talent for accumulation did not extend to the acquirement of taste and knowledge in the fine arts, and, perhaps, his dulness and inattention to these provoked some musical poet to invent the fable of his decision in favour of Pan against Apollo. The scholiast upon Aristophanes, to explain the fiction of his long ears, says that it was designed to intimate that he kept spies in all parts of his dominions.

Marfyas, another player on the flute, was still more unfortunate, than either Pan, or his admirer, Midas. I shall collect the history of this personage, so celebrated by antiquity, chiefly from Diodorus Siculus, and from M. Burette's notes to the *Treatise of Music*, by Plutarch (*m*).

Marfyas was of Celænæ, a town in Phrygia, and son of Hyagnis, who flourished, according to the Oxford Marbles, 1506 years before Jesus Christ. His connection with Cybele, afterwards so celebrated as the mother of the Gods, makes it necessary to give some account of her before we proceed in the history of Marfyas.

The Phrygians, says Diodorus Siculus (*n*), affirm, that they had formerly a king named Meon, who was likewise sovereign of Lydia. This king took to wife a princess of the name of Dindyma, by whom he had a daughter. Enraged at the disappointment of not having a son, he exposed her upon mount Cybele. However the Gods permitted her to be suckled by wild beasts; which being afterwards discovered by some shepherdesses in the neighbourhood, they stole her from her savage nurses, and upon carrying her home, called her Cybele, from the name of the mountain where she had been found. This child surpassed as she grew up all her companions, not

(*m*) *Mem. de l'Acad. des Inscip. tom. x.*

(*n*) *Lib. iii. cap. 10.*

only in beauty, but wisdom and talents; for she invented a flute, composed of many pipes, and was the first of that country who introduced drums and cymbals into chorusses. She likewise healed by purification, and musical airs, the diseases of children, and of the shepherds flocks. As she had saved the lives of many children, and had had them frequently in her arms, she was unanimously called the *mother of the mountain*.

“The chief of her friends was Marsyas, a man commendable for his wisdom and temperance: he manifested great genius in the invention of a flute, which by means of holes, like that of Minerva, expressed all the sounds of the several pipes, of which the syrinx was composed; and his attachment to Cybele must have been of a very pure and Platonic kind; for we are told that he preserved his chastity to the last hour of his life.” However, the disposition of Cybele was not quite so serene; for she had no sooner arrived at years of maturity, than she became violently enamoured of a young man in the neighbourhood, named Atys. And being recognized by her parents soon after her secret commerce with him, from which a pregnancy had ensued, she was carried home to the court of her father, who supposed her to be still a virgin; but having discovered the contrary, he put Atys, and the shepherdesses, by whom she had been brought up, to death, nor would afterwards suffer their bodies to be buried.

“Cybele transported with love for this young man, and grief for the fate of her nurses and benefactresses, became insane, and ran wildly up and down the country, beating the cymbals. Marsyas taking pity of her misfortunes, and preserving his former friendship for her, followed her in all her rambles, till she arrived at Nyssa, the residence, at that time, of Bacchus, or Osiris, where they found Apollo, who had acquired great reputation by his manner of playing the lyre. For it is said that though Mercury invented this instrument in the manner already related, he afterwards gave it to Apollo, who was the first

first that played upon it with method, and, by singing to it, made it the constant companion of poetry (a).

Marfyas having engaged in a musical dispute with Apollo, chose the people of Nyfa for judges. Apollo played at first a simple air upon his instrument; but Marfyas taking up his pipe struck the audience so much by the novelty of its tone, and the art of his performance, that he seemed to be heard with more pleasure than his rival. Having agreed upon a second trial of skill, it is said that the performance of Apollo, by accompanying the lyre with his voice, was allowed greatly to excel that of Marfyas upon the flute alone. Marfyas, with indignation, protested against the decision of his judges, urging, that he had not been fairly vanquished according to the rules stipulated, because the dispute was concerning the excellence of their several instruments, not their voices; and that it was wholly unjust to employ two arts against one.

Apollo denied that he had taken any unfair advantage of his antagonist, since Marfyas had employed both his mouth and fingers in performing upon his instrument; so that if he was denied the use of his mouth, he would be still more disqualified for the contention. The judges approved of Apollo's reasoning, and ordered a third trial. Marfyas was again vanquished; and Apollo inflamed by the violence of the dispute, slew him alive for his presumption.

Pausanias relates a circumstance concerning this contest, that had been omitted by Diodorus, which is, that Apollo accepted

(a) According to Homer's account of this transaction, in his hymn to Mercury, it was given by that God to Apollo, as a peace-offering and indemnification for the oxen which he had stolen from him:

To Phœbus Maia's son presents the lyre,
A gift intended to appease his ire;
The god receives it gladly, and essays
The novel instrument a thousand ways.

With dext'rous skill the plectrum wields,
and sings.

With voice accordant to the trembling
strings;

Such strains as gods and men approv'd,
from whence

The sweet alliance sprung of sound and
sense.

the challenge from Marfyas, upon condition that the victor should use the vanquished as he pleased.

Diodorus informs us, that Apollo soon repenting of the cruelty with which he had treated Marfyas, broke the strings of the lyre, and by that means put a stop, for a time, to any further progress in the practice of that new instrument.

The next passage in this author being wholly applicable to the history of ancient music, I shall transcribe it: "The Muses, says he, afterwards added to this instrument the string called *Mese*; Linus, that of *Lichanos*; and Orpheus and Thamyras, those strings which are named *Hypate*, and *Parhypate*."

It has been already related, that the lyre invented by the Egyptian Mercury had but three strings; and by putting these two circumstances together, we may perhaps acquire some knowledge of the progress of music, or, at least, of the extension of its scale, in the highest antiquity.

Mese, in the Greek music, is the fourth sound of the second tetrachord of the great system, and first tetrachord invented by the ancients, answering to our A, on the fifth line in the base. If this sound then was added to the former three, it proves two important points: first, that the most ancient tetrachord was that from E in the base, to A: and that the three original strings in the Mercurian and Apollonian lyre were tuned E, F, G, which the Greeks called *Hypate Mese*, *Parhypate Mese*, and *Mese Diatonos*. The addition therefore of *Mese* to these, completed the first and most ancient tetrachord, E, F, G, A (*p*).

The string *Lichanos* then being added to these, and answering to our D, on the third line in the base, extended the compass downwards, and gave the ancient lyre a regular series

(*p*) Captain Norden says, the sepulchral urn on the first pyramid near Memphis, though it rest intirely upon its base, sounds like a bell; and Dr. Shaw believes the sound emitted to be *E-la-mi*. Now if it

be true that the Greeks had their first musical knowledge from Egypt, we may suppose this sound to be the standard pitch, and fundamental note of the Mercurian lyre, and first tetrachord, E, F, G, A.

of five sounds, in the Dorian mode, the most ancient of all the Greek modes; and the two strings called *Hypate*, and *Parhypate*, corresponding with our B and C in the base, completed the heptachord, or seven sounds, B, C, D, E, F, G, A, a compass that received no addition, till after the time of Pindar, who calls the instrument then in use, the *seven-tongued lyre*. But to return to Apollo and Marsyas.

It is natural to suppose that great provocation had been given on both sides, previous to a trial of skill, big with such serious consequences. And it appears from a passage in Apuleius, that the champions had tried their strength at invective and sarcasm, before the musical contest began. According to this writer, Marsyas was so foolish as to irritate the God, by opposing his own entangled hair, his frightful and shaggy beard, to the flowing locks, the finical effeminacy, and dainty cleanliness of his rival; for which he was hissed by all the Muses and company present (q).

It is difficult to acquire a true idea of the character of this musician, as some ancient writers, in speaking of him, tell us that he was a man of talents and wisdom, while others represent him as an ignorant clown; just as Polonius, in our Shakespeare's Hamlet, is in some scenes a wise man, and in others an idiot.

Plato (r) tells us that we are indebted to Marsyas and Olympus for wind-music; and to these two musicians is likewise attributed the invention of the Phrygian and Lydian measure. Marsyas is also said by some to have been the inventor of the double flute, though others give it to his father Hyagnis.

(q) *Marsyas, quod stultitiæ maximum specimen est, non intelligens se de ridiculo haberi, priusquam tibia acciperet inflare, prius de se et Apolline quædam deliramenta barbarè effutivit: laudans sese quod erat et coma relicinus, et barba squallidus, et pectore hirsutus, et arte tibicem, et fortuna egenus, con-*

tra Apollinem ridiculum dictu, adversis virtutibus culpabat. Quod Apollo esset et coma intonsus, et genis gratus, et corpore glabellus, et arte multiscius, et fortuna opulentus. —Risere Musæ, cum audirent hoc genus crimina. Apuleius Floridor. p. 341.

(r) *De Legib.*

Antiquity has furnished us with several monuments of the punishment inflicted upon him by Apollo. He may be seen in Berger, in Maffei, and in Du Choul. The story is likewise well and fully represented in one of the ancient pictures dug out of Herculaneum (s). Here the vanquished musician is bound to a tree, the executioner standing by him with a knife in his hand, only waits for orders from the victor to slay him alive. Apollo is seated at a distance, with his lyre in one hand, a plectrum in the other, and a Muse by his side, preparing a garland for him in token of victory. A young man, on his knees, appears to implore his mercy: this is thought to be Olympus, the scholar of Marfyas, asking pardon for his master, or, perhaps, permission to give him funeral obsequies, which, as we learn from Hyginus, he obtained.

There is also a magnificent statue at Rome, where Marfyas is represented fastened to a tree with his arms extended. Others may be seen where Apollo holds a knife in his right hand, and the skin of Marfyas in his left, which serves to confirm the opinion, that some of the ancients thought Apollo slew him himself. In some of the statues, Marfyas is sculptured with the ears and tail of fawns and satyrs; of this kind, is the figure in the grand duke's gallery at Florence. There was anciently to have been seen in the citadel at Athens, a statue of Minerva chastising the satyr Marfyas, for appropriating to himself the flutes which the goddess had rejected with contempt. These flutes of Marfyas had been consecrated in the temple of Apollo at Sicyon, by a shepherd who had collected them. At Mantinea, in the temple of Latona, was also to be seen a Marfyas playing upon the double flute; and he was not forgotten in the famous picture of Polygnotus, described by Pausanias (t).

Among the inventions of Marfyas is numbered likewise the bandage made of leather thongs, used by the ancients in play-

(s) *Antich. d'Ercolano. tom. ii. tav. 19.*

(t) *Lib. x. cap. 30.*

ing the flute, in order to keep the cheeks and lips firm, and prevent the distortion of the countenance, so common in playing upon wind-instruments. This contrivance, which left only a small aperture between the lips, just sufficient to receive the mouth-piece of the flute, augmented likewise the force of the performer (u).

Servius, the grammarian, asserts, that most free towns had in the public places a statue of Marfyas, which was a symbol of their liberty, because of the close connection between Marfyas, taken for Silenus and Bacchus, known to the Romans by the name of *Liber*. There was in the Forum at Rome one of those statues, with a tribunal erected by it, where justice was administered. The advocates who gained their cause, took care to crown this statue, as it were to thank Marfyas for the success of their eloquence, and to engage his favour to them in quality of an excellent player on the flute: for, in ancient times, it is well known how great an influence the sound of that, and other instruments, had in declamation, and what power the flute, in particular, had, in animating orators and actors.

However, notwithstanding the many testimonies of ancient authors concerning Marfyas having been flead alive, among which is that of Herodotus, who says he saw the skin of this unfortunate musician hanging up at Celænæ, in the public square, in the form of a bladder, or foot-ball; there are authors who take the whole story to be an allegory founded upon the river Marfya, which ran through the city Celænæ, making a harsh and disagreeable noise to the ear; or, rather, if we may believe Fortunio Liceti (x), the fable had its rise from this, that, before the invention of the lyre, the flute was in higher favour than any other musical instrument, and enriched all those who were able to play upon it; and as the lyre brought the flute

(u) This bandage was called *φορτία*, or *capistrum*. It is mentioned in Plutarch's *Symposiacs*, in the *Scholias* of Aristophanes, and elsewhere; and may be seen in some ancient sculpture, which Bar-

tholinus has had engraved in his treatise *de Tibiis Veterum*, and in Plate VI. No. 1. of this work.

(x) *Hierog.* cap. 109.

into

into such discredit that nothing was to be gained by it, Apollo was said to have stripped off the skin of Marsyas, the best performer on the flute of his time; which was the better imagined, as the money of those days was of leather (*y*). This punishment has frequently been inflicted in modern times upon inferiority, not only by rival musicians of great talents, but by fashion.

The next incident to be mentioned in the history of Apollo is his defeat of the serpent Python.

The waters of Deucalion's deluge (*z*), says Ovid (*a*), which had overflowed the earth, left a slime, from whence sprung innumerable monsters, and among others the serpent Python, which made great havock in the country about Parnassus. Apollo, armed with his darts, put him to death; which physically explained, implies, that the heat of the sun having dissipated the noxious steams, those monsters soon disappeared; or, if this fable be referred to history, the serpent was a robber, who haunting the country about Delphos, and very much infesting those who came thither to sacrifice; a prince, who bore the name of Apollo, or one of the priests of that God, put him to death.

This event gave rise to the institution of the Pythian games, so frequently mentioned in the Grecian history. They were celebrated at first once in eight or nine years; but in process of time were repeated every four years. Music and poetry were in a particular manner, subjects of contention in these games, which were instituted in honour of that divinity, who was the immediate patron and protector of those arts. And if, as Ovid informs us, they owe their institution to Amphictyon, the son of Deucalion, soon after the deluge, which bears the name of his father, they were the most ancient of all the four great

(*y*) Pollux, *lib. iv. cap. 10.*

(*z*) This event happened, according to the Parian Marbles, and Dr. Blair, 1503 years before the Christian Æra, though,

according to Sir Isaac Newton, and Dr. Priestley, but 1046.

(*a*) *Met. lib. i.*

games of Greece: for Pausanias tells us that the Olympic games were first celebrated by Clymenus, a descendant of Hercules, fifty years after the deluge of Deucalion. However, the same writer, who, in his travels through Greece, was particularly solicitous to inform himself of every circumstance relative to these institutions, tells us, that Diomedes, the son of Tydeus, having escaped a dangerous tempest in returning from Troy, dedicated a temple to Apollo, and founded the Pythian games in his honour. After being discontinued for some time, they were renewed by the brave Eurylochus of Thessaly, whose valour and exploits acquired him the name of the *new Achilles*. This renewal of the Pythic games happened in the third year of the forty-eighth Olympiad, 586 before Christ; after which time they served as an æra to the inhabitants of Delphos, and the neighbourhood.

These musical contests will be particularly discussed hereafter, with the other games of Greece, when we have quitted the mythological maze of fable and allegory, and are arrived at the strait road of history.

It was from the legend of Apollo's victory over the Python, that the God himself acquired the name of Pythius, and his priestess that of Pythia. The city of Delphos, where the famous oracles were so long delivered, was likewise frequently styled Pytho.

The decrees of this oracle were not only uttered in hexameter verse, but, if we may believe Lucan, were *sung* (b).

And, according to Plutarch, in his discourse *on the Pythian Priestess no longer rendering her prophecies in verse*, the ancient oracles were not only delivered in verse, and in a pompous style, but were sung likewise *to the sound of the flute* (c).

(b) *Sive canet fatum, seu quod jubet ille canendo*
Fit fatum.

(c) Plutarch in this passage uses the term *πλασμα*, for a *florid modulation of voice*, and Quintilian latinizes the same

word to express a *soft and delicate modulation*. Lib. i. cap. 14. *Nec psalmate effeminate*; which is a confirmation of poetry being *always sung*. See an excellent criticism upon the term *πλασμα*, *Div. Leg.* book iv. sect. 4.

The oracle of Dodona was founded by the Palaſgi, in the time of Cecrops, 1550 years before Chriſt; that of Delphos was, however, more ancient; for, according to Pausanias, it ſubſiſted before Deucalion's deluge.

Archbiſhop Potter ſays (*d*), it is as certain as any thing ſo diſtant can be, that this oracle was very ancient, and flouriſhed about 100 years before the Trojan war: and Sir Iſaac Newton ſays (*e*), “a prieſteſs of Jupiter Ammon, being brought by Phœnician merchants into Greece, ſet up the oracle of Jupiter at Dodona. This gives a beginning to oracles in Greece: and by their dictates, the worſhip of the dead is every where introduced (*f*).”

Coretas is the name given by Plutarch to the goat-herd who firſt diſcovered and felt the inſpiration at Delphos. It is by moſt authors ſuppoſed, that ſome intoxicating vapours iſſued from a fiſſure in the earth, the *χασμα*, or *chasm*, where goats firſt experienced their effects, where the tripod of the Pythia was afterwards placed, and upon which ſpot the famous temple was erected (*g*).

As the temple of Apollo was the firſt of the kind, it was alſo the laſt which was abandoned upon the ceſſation of oracles, or, rather, when they ceaſed to be in repute.

Plutarch upon this ſubject ſays, that oracles were generally delivered in verſe, preceded by the ſound of kettles; which furniſhes no very exalted idea of the ſtate of muſic in remote antiquity, any more than what one of the interlocutors in the ſame author's Dialogue on the Pythia, ſays of her verſes, does of poetry. “I have often wondered, ſaid Diogenian, at the meaneſs, and aukward roughneſs of the verſes, which con-

(*d*) *Archæol. Græc.*

(*e*) *Chronology*, p. 19.

(*f*) By the worſhip of the dead, I ſuppoſe, Sir Iſaac means the pagan religion in general, which conſiſted, as has been already obſerved, in the deification of il-

luſtrious mortals after their deceaſe.

(*g*) I do not remember to have ſeen in any author, a parallel between the effects of the air emitted from this cavern, and that of the *Grotta de' Cani*, near Naples.

veyed the ancient oracles to mankind. And yet Apollo is called the leader of the Muses, and God of poetry, as well as of music; and therefore it seems natural to suppose, that he would attend as much to elegance and beauty in the style and language of poetry, as to the voice and manner of singing it." All that pagan piety could offer in defence of Apollo, was to say, that the God only furnished *inspiration* with respect to the knowledge of future events, but gave himself no trouble about the voice, sounds, words, or metre, that this knowledge was delivered in, all which proceeded from the priestesses. And yet how the God of music could bear the sounding brass, and worse than tinkling cymbals, with which he was constantly stunned, is not easy to imagine.

In after-times the Pythia had in her ministry professed *prophets*; and these had *poets* under them, whose business was to put the oracles into verse. However, poets had no such employment in earlier times. Herodotus tells us, that Olen of Lycia was at once both prophet and poet: the most ancient hymns known to have been used at Delos, in honour of Apollo, were of his composition; and the Greeks acknowledge him to have been the first that applied poetry to the purpose of praising the Gods; indeed it seems as if hymns were the most ancient of all poetical compositions (*h*).

Olen was the first priest of Apollo at Delos, in the temple erected there to this God, by the northern people called Hyperboreans. Who these Hyperboreans were, ancient authors are

(*h*) The rhetorician Menander enumerates eight different species of *hymns*. In this author, and in the notes of the learned Spanheim upon Callimachus, it appears, that the most ancient of these canticles were thought to have been dictated by the Gods themselves, or, at least, by men truly inspired. Some of them received their names from the different divinities to whom they were addressed, and the occasions upon which they were sung;

and to others were prefixed the names of the most ancient poets, who had signalized themselves in this species of writing: such as Olen, Pamphus, Thamyris, Orpheus, Anthes, and Homer. *Burette's Notes on Plutarch.*

Longinus, in a beautiful simile, compares the effects of reading the best ancient authors, to the sacred vapours with which the Pythian priestess was inspired on the tripod.

not very well agreed. Diodorus Siculus calls them a people of Asia, near the north, who inhabited a most fertile island, equal in size to that of Sicily. This was the birth place of Latona, the mother of Apollo, on which account the islanders had a particular veneration for her son. They were almost all priests of that God, and continually singing hymns to his honour. They consecrated an extensive territory to him upon the island, in the midst of which was a magnificent temple, in an oval form, always abounding with rich offerings. Their city was even consecrated to the God, and filled with musicians of all kinds, who every day celebrated his praises.

The particular worship of Apollo in that island is supposed to have originated from the arrival of the Egyptian conqueror, Sesostris. The birth of a God in any country, says Herodotus, denoted only the introduction of his worship there. Thus Jupiter was said to have been born in Crete, and Apollo in Delos.

But to return to the oracle at Delphos. The most celebrated of all the *Pythias* was Phœmonoe, who was not only the first priestess of Apollo, but, according to Plutarch and Pausanias, the first who pronounced oracles in hexameter verse.

In after-times there were five principal priests of sacrifice appointed. They were called ὅσιοι, *holy*; and whatever was sacrificed at their reception was called ὁσίων, *the victim*. These ministers were perpetual, and hereditary in their children. They were believed to be descended from Deucalion. Besides a great number of inferior priests, there were many players upon musical instruments, and heralds who proclaimed the public feasts, to which, sometimes, all the inhabitants of Delphos were invited. To these were joined chorusses of youths and virgins, who sung and danced at the festivals of Apollo.

Plutarch, in his *Dialogue on Music*, tells us, that Philammon had celebrated the birth of Latona, Apollo, and Diana, in lyric verses; and that he was the inventor of the dances that were used in the temple of Apollo.

As Apollo was the God of the fine arts, those who cultivated them were called his sons. Of this number was Philammon of Delphos, whom the poets and mythologists make the twin brother of Autolychus, by the nymph Chione, and Apollo and Mercury. It is pretended that both these divinities were favoured by the nymph on the same day; and that their fires were known from their different talents. Philammon, a great poet and musician, was reported to be the offspring of the God who presides over those arts; and Autolychus, from the craftiness and subtilty of his disposition, was said to have sprung from Mercury, God of theft and fraud. Philammon is one of the first, after Apollo, upon fabulous record, as a vocal performer, who accompanied himself with the sound of the lyre; his son was the celebrated Thamyris. Tatian ranks Philammon among the writers who flourished before the time of Homer; and the scholiast of Apollonius Rhodius, from Pherecydes, affirms, that it was this musical poet, and not Orpheus, who accompanied the Argonauts in their expedition. If this circumstance could be depended upon, there would be no difficulty in fixing the time when he lived, as the chronologists place this expedition in the century immediately preceding the Trojan war.

There can be no doubt but that Apollo was more generally revered in the pagan world than any other deity; having in almost every region of it, temples, oracles, and festivals, as innumerable as his attributes: the wolf and hawk were consecrated to him, as symbols of his piercing eyes; the crow and the raven, because these birds were supposed to have by instinct the faculty of prediction; the laurel, from a persuasion that those who slept with some branches of that tree under their heads, received certain vapours, which enabled them to prophesy. The cock was consecrated to him, because by his crowing he announces the rising of the sun; and the grasshopper, on account of his singing faculty, which was supposed to do honour

honour to the God of Music. Most of the ancient poets have celebrated this tuneful insect, but none better than Anacreon, Ode 43.

Plato says that the grasshopper sings all summer without food, like those men who, dedicating themselves to the Muses, forget the common concerns of life.

The swan was regarded by the ancients as a bird sacred to Apollo in two capacities; first, as being, like the crow and raven, gifted with the spirit of prediction (*i*); and, secondly, for his extraordinary vocal powers. The sweetness of his song, especially at the approach of death, was not only extolled by all the poets of antiquity, but by historians, philosophers, and sages (*k*); and to call a great writer the *swan* of his age and nation, was a full acknowledgement of his sovereignty. Thus Horace calls Pindar, *the Theban swan* (*l*). We do not, however, find that Jupiter, when he assumed the figure of a swan, acquired the good graces of Leda by his vocal powers.

The universality with which the talent of this bird for song was allowed by antiquity, has furnished M. Morin with the subject of a pleasant Dissertation upon this question, *Why swans sung so well formerly, and why they sing so ill, or rather why they have wholly ceased to sing, now* (*m*)? The author asks if it is the want of *hearing* music as they formerly did, on the banks of the Cäyster and Meander? But, if they had imitative powers, the concerts so frequently performed on the Seine and the Thames, are surely sufficient to provoke them to the exercise of those powers. Are they degenerated in northern climates?

(*i*) Commemorat (Socrates) ut cygni, qui non sine causa, Apollini dicati sunt, sed quod ab eo divinationem habere videantur, quaprovidentes quid in morte boni sit: cum cantu et voluptate moriantur. Cicero Tuscul. Quæst. lib. i. 59.

(*k*) Illi quidem (Cygni) quando se brevi sentiunt morituros, tunc magis admodum dulcius canunt, quam antea consueverint, congratulantes quod ad Deum sint, cujus erant

This

This question is fully answered by Ælian (*n*), who asserts, that among the Hyperboreans, or inhabitants of the *most northern parts of the globe*, who had a celebrated temple to Apollo, at a solemn festival in honour of the God, which was annually kept at a great expence, as soon as the priest had begun the ceremony, by a procession, aspersions, and lustrations, a large flock of swans instantly descended from the top of Mount Riphæus; and after having croaked and cackled in the air, round the temple, to make a kind of lustration, in their manner, they entered the choir, and gravely took their places among the priests and musicians, who were preparing to sing a sacred hymn in honour of this festival; after which they performed their parts with the utmost precision, neither singing out of tune, nor breaking time; and when this was done, they retired in great order from the temple.

“Here are swans for you, says M. Morin, who sung psalms in a *northern* climate, as well as in Greece, in the presence of a whole people, and an infinite number of spectators of all nations, who were drawn together by the solemnity; which shews, that, according to the opinion of those times, swans always, and in every place, retained the power and dignity of songsters, inseparable from their kind. However, Ælian confesses that he had the story from tradition, having never been able to acquire any proof of their musical powers from experience; and that all he knew of this matter, was, that the ancients held it as a certainty, that before they died, these birds sung a kind of air, which was on that account called the *swan's air*.”

Perhaps the idea of swans having the power of singing, was originally suggested by the magnificent length of their necks, which seem as capable of divisions, trills, and shakes, as any of our wind-instruments. Lucian (*o*) is the only ancient writer who has dared to doubt of the musical abilities of swans. He tells us, with his usual pleasantry, that he tried to ascertain the

(*n*) *Lib. ii. cap. 1.*

(*o*) *De Elect. seu Cygnis.*

fact, by making a voyage on the coasts of Italy ; and relates, that being arrived at the mouth of the Po, he and his friends had the curiosity to sail up that river, in order to ask the watermen and inhabitants concerning the tragical fate of Phaeton ; and to examine the poplars, descendants of his sisters, whom they expected to shed amber instead of tears ; as well as to see the swans represent the friends of this unfortunate prince, and hear them sing lamentations and sorrowful hymns, night and day, to his praise, as they used to do, in the character of musicians, and favourites of Apollo, before their change. However, these good people, who never had heard of any such *metamorphoses*, freely confessed, that they had indeed sometimes seen swans in the marshes near the river, and had heard them croak and scream in such a disagreeable manner, that crows and jays would be firens, compared with them, in a musical capacity ; but that they had never even dreamed of swans singing a single note that was pleasing, or fit to be heard.

But to return once more to Apollo. Plutarch, who was himself a priest of that God, impressed with the highest respect and veneration for him and for music, in his Dialogue upon that art, makes one of his interlocutors say, that an invention so useful and charming could never have been the work of man, but must have originated from some God ; such as Apollo, the inventor of the flute and lyre, improperly attributed to Hyagnis, Marsyas, Olympus, and others ; and the proofs he urges in support of this assertion, shew, if not its truth, at least that it was the common and received opinion.

All dances and sacrifices, says he, used in honour of Apollo, are performed to the sound of flutes : the statue of this God at Delos, erected in the time of Hercules, had in its right hand a bow, and on the left stood the three Graces, who were furnished with three kinds of instruments : the lyre, the flute, and syrinx. The youth also, who carries the laurel of Tempe to Delphos, is accompanied by one playing on the flute : and the sacred

cred presents formerly sent to Delos by the Hyperboreans, were conducted thither to the sound of lyres, flutes, and shepherds' pipes. He supports these facts by the testimonies of the poets Alcæus, Alcmon, and Corinna.

It seems as if the account of Apollo could not be concluded by any thing that is left to offer on the subject, so properly, as by part of the celebrated hymn of Callimachus, which during many ages was performed and heard by the most polished people on the globe, with the utmost religious zeal, at the festivals instituted to this God. What has already been said may, perhaps, throw some light upon this beautiful composition, which, in return, will explain and confirm the reasons already assigned for the high veneration in which this divinity was held by antiquity.

H Y M N to A P O L L O.

Hah ! how the laurel, great APOLLO's tree,
And all the cavern shakes ! far off, far off,
The man that is unhallow'd : for the God
Approaches. Hark ! he knocks : the gates
Feel the glad impulse : and the sever'd bars
Submissive clink against their brazen portals.
Why do the Delian palms incline their boughs,
Self-mov'd : and hov'ring swans, their throats releas'd
From native silence, carol sounds harmonious ?

Begin, young men, the hymn : let all your harps
Break their inglorious silence ; and the dance,
In mystic numbers trod, explain the music.
But first by ardent pray'r, and clear lustration
Purge the contagious spots of human weakness :
Impure no mortal can behold Apollo.
So may you flourish, favour'd by the God,
In youth with happy nuptials, and in age
With silver hairs, and fair descent of children ;

So lay foundations for aspiring cities,

And bless your spreading colonies' encrease.

Pay sacred rev'rence to Apollo's song ;

Left watchful the far-shooting God emit

His fatal arrows. Silent Nature stands ;

'And seas subside, obedient to the sound

Of Io ! Io Pæan ! nor dares Thetis

Longer bewail her lov'd Achilles' death :

For Phœbus was his foe. Nor must sad Niobe

In fruitless sorrow persevere, or weep

Even thro' the Phrygian marble. Hapless mother !

Whose fondness could compare her mortal offspring

To those which fair Latona bore to Jove.

Io ! again repeat ye, Io ! Pæan !

Recite Apollo's praise till night draws on,

The ditty still unfinish'd ; and the day

Unequal to the Godhead's attributes

Various, and matter copious of your songs.

Sublime at Jove's right hand Apollo sits,

And thence distributes honour, gracious king,

And theme of verse perpetual. From his robe

Flows light ineffable : his harp, his quiver,

And Lycian bow, are gold : with golden sandals

His feet are shod. How rich ! how beautiful !

Beneath his steps the yellow min'ral rises ;

And earth reveals her treasures. Youth and beauty

Eternal deck his cheek : from his fair head

Perfumes distil their sweets ; and chearful Health,

His duteous hand-maid, through the air improv'd

With lavish hand diffuses scents ambrosial.

The spearman's arm by thee, great God, directed,

Sends forth a certain wound. The laurel'd bard

Inspir'd by thee, composes verse immortal.

Taught

Taught by thy art divine, the sage physician
Eludes the urn, and chains, or exiles death.

Perpetual fires shine hallow'd on thy altars,
When annual the Carnean feast is held :
The warlike Libyans, clad in armour, lead
The dance, with clanging swords and shields, they beat
The dreadful measure : in the chorus join
Their women, brown but beautiful ; such rites
To thee well pleasing.

The mon'strous Python
Durst tempt thy wrath in vain ; for dead he fell,
To thy great strength, and golden arms unequal.

Io ! while thy unerring hand elanc'd
Another and another dart, the people
Joyfully repeated *Io ! Io Pean !*
Elance the dart, Apollo : for the safety
And health of man, gracious thy mother bore thee !

PRIOR.

The M U S E S.

After the enquiries that have been made, perhaps with too much minuteness, concerning the origin of that worship which antiquity paid to Mercury and Apollo, it seems necessary to say something of other pagan divinities, among whose attributes music has a place. Of this class, as most intimately connected with the God of Song, are the *Muses*, those celebrated female musicians, so dear to men of genius, and lovers of art, that it is hardly possible for them to hear their names mentioned without feeling a secret and refined pleasure. The Muses were originally only singers and musicians, in the service of Osiris, or the great Egyptian Bacchus, under the instruction and guidance of his son Orus ; but in succeeding times they were called the daughters of Jupiter and Mnemosyne, or Memory.

These are the only pagan divinities whose worship has been continued through all succeeding changes in the religion and sentiments of mankind. Professors of every liberal art in all the countries of Europe, still revere them, particularly the poets, who seldom undertake the slightest work, without invoking their aid.

Sir Isaac Newton tells us, that the singing women of Osiris were celebrated in Thrace by the name of the Muses; and that the daughters of Pierus, a Thracian, imitating them, were celebrated by the same name (p).

Diodorus Siculus informs us (q), that Aleman of Messene, a lyric poet, who flourished in the twenty-seventh Olympiad, 670 years B. C. makes them the daughters of Uranus and Terra. It has been asserted by some ancient writers, that at first they were only three in number; but Homer, Hesiod, and other profound mythologists, admit of nine (r).

In his Hymn to Apollo, Homer says

— By turns the *Nine* delight to sing.

And Hesiod, in his Theogony, names them all. They are said severally to preside over some art or science, as music, poetry, dancing, astronomy. By some they are called virgins, because the virtues of education appear unalterable: they are called Muses from a Greek word (s), which signifies to explain mysteries, because they have taught things the most curious and important to know, and which are above the comprehension of vulgar minds. Each of their names is said to include some particular allegory; *Clio*, for instance, has been thus called, because those who are praised in verse, acquire immortal fame; *Euterpe*, on account of the pleasure accruing to those

(p) See Ovid's *Metam. lib. v. fab. 5.* for the contest of the Pierides with the Muses.

(q) *Lib. iv.*

(r) It has been said, that when the citizens of Sicyon directed three skilful sta-

tuaries to make each of them statues of the three Muses, they were all so well executed, that they did not know which to chuse, but erected all the nine, and that Hesiod and Homer only gave them names.

(s) *Mus, μουσ.*

who

who hear learned poetry ; *Thalia* implies for ever flourishing ; *Melpomene*, that her melody insinuates itself into the inmost recesses of the soul ; *Terpsichore* marks the pleasure which those receive who are versed in the liberal arts ; *Erato* seems to indicate that the learned command the esteem and friendship of all mankind ; *Polyhymnia*, that many poets are become immortal by the number of hymns which they have addressed to the Gods ; *Urania*, that those whom she instructs elevate their contemplations and celebrity to the heavens and the stars ; and lastly, the exquisite voice of *Calliope* has acquired her that appellation, as the inventress and guardian of eloquence and rhetoric.

An epigram of Callimachus gives the attributes of the Muses in as many lines.

Calliope the deeds of heroes sings ;
Great *Clio* sweeps to history the strings ;
Euterpe teaches mimes their silent show ;
Melpomene presides o'er scenes of woe ;
Terpsichore the flute's soft pow'r displays ;
And *Erato* gives hymns the Gods to praise ;
Polymnia's skill inspires melodious strains ;
Urania wise, the starry course explains ;
And gay *Thalia's* glass points out where folly reigns (t). }

This epigram does not, however, exactly correspond with the ideas of other poets, or of the ancient painters, in characterising the attributes of the Muses. Among the capital pictures dug out of Herculaneum, are portraits of Apollo, and the Muses, his companions : from which engravings have been published in the second volume of *Le Pitture antiche d'Ecolano*.

(t) <i>Calliope reperit sapientes provida cantus</i>	<i>Terpsichore. Divumque Erato mox protulit hymnos.</i>
<i>Heroum. Clio citharam clarissima. Vocem Mimorum Euterpe tragicis letata querelis.</i>	<i>Harmoniam cunctisque Polymnia cantibus addit.</i>
<i>Melpomene dulcem mortalibus addidit ipsa Barbiton. Et suavis tibi tradita tibia fertur</i>	<i>Euranie cæli motus atque astra notavit.</i>
	<i>Comica vita tibi est, moresque Thalia reperti.</i>
	Nat. Comes.
	Portrait

Portrait I. The God is seated on a throne, with a cithara of eleven strings in his left hand, in the character of *Musagetes*, or conductor of the Muses (*u*).

II. *Clio*, seated, her head crowned with laurels; in her left hand she holds an open volume, in which she appears to be reading. On the outside is written ΚΛΕΙΩ. ΙCΤΟΡΙΑΝ. *Clio the historian*. At her feet are six other rolls, or antique volumes, inclosed in a cylindrical case.

The picture of *Euterpe* had been so much injured by time, that it could not be engraved. But the poets usually give her the flute, as her symbol.

Dulciloquos calamos Euterpe flatibus urget.

Auson. Idyl. 20.

III. ΘΑΛΕΙΑ ΚΩΜΟΔΙΑΝ. *Thalia the Comedian*, with a comic mask in her left hand. See Plate IV. No. 3.

IV. ΜΕΛΠΟΜΕΝΗ ΤΡΑΓΩΔΙΑΝ. *Melpomene, the protectress of Tragedy*, with a tragic mask in her left hand.

V. ΤΕΡΨΙΧΟΡΗ ΛΥΡΑΝ. *Terpsichore the Lyrist*. The instrument which she holds is small, and has but seven strings. The belly of it is in a round form. It is disputed whether this lyre is the same as the cithara, or testudo. The belly and sides are something like those of the latter. But whatever name this kind of instrument had in earlier times, there can be no doubt of lyre being the general appellation for it when it was painted. See Plate V. No. 3.

VI. ΕΡΑΤΩ ΨΑΛΤΡΙΑΝ. *Erato with a Psaltery*, or long lyre of nine strings. This instrument is more than twice the length of that in the hand of Terpsichore. See Plate V. No. 4. The Muse holds a plectrum in her right hand, and seems playing with the fingers of her left.

(*u*) Mythology chose Apollo to preside over arts and sciences, but gave him the nine Muses for his companions, because the ancients were persuaded, that without the concurrence of a sex which every where

diffuses grace and pleasure, arts and sciences would have been productive of nothing but disgust and melancholy to mankind.

VII. ΠΟΛΥΜΝΙΑ ΜΥΘΟΥΡΧ. *Polhymnia the Fabulist*. She is here represented as the patroness of mimes, with her finger on her mouth, in token of silence. The painter differs in characterising this Muse from most of the poets and mythologists, who make her the inventress of hymns to the Gods. However, there are etymologists, among whom are Plutarch and Nonnus, who derive her name from Μῦθη, *tradition*, alluding to the fables and tales of antiquity, which the mimes and dancers usually made the subjects of their performance. *Nonnus Dionys.* V. v. 104, *et seq.* says,

Sweet Polhymnia, see advance,
Mother of the graceful dance :
She who taught th' ingenious art,
Silent language to impart :
Signs for sentiment she found,
Eloquence without a sound :
Hands loquacious save her lungs,
All her limbs are speaking tongues.

VIII. *Urania*, with a globe in her hand, as the patroness of astronomy.

IX. ΚΑΛΛΙΟΠΗ ΠΟΙΗΜΑ, *Calliope the Poetess*; with a roll of paper, or volume in her hand, as the Muse who presides over heroic verse, or epic poetry. The author of a famous epigram in the *Anthologia*, says,

Καλλιόπη σοφὴν ἠρωϊδὸς εὐρεν αἰοίδης.
Calliope th' heroic canto found.

The ancients had numberless ingenious and fanciful ideas concerning the Muses; Fulgentius informs us, from the testimony of various ancient authors, that Apollo was painted with a cithara of *ten strings*, as a symbol of the union of the God with the nine Muses, and to shew that the human voice is composed of *ten parts*; of which the four first are the front
teeth,

teeth, placed one against the other, so useful for the appulse of the tongue, in forming sounds, that, without any one of them, a whistle would be produced instead of a voice; the fifth and sixth are the two *lips*, like cymbals, which, by being struck against each other, greatly facilitate speech; the seventh is the *tongue*, which serves as a plectrum to articulate sounds; the eighth is the *palate*, the concave of which forms a belly to the instrument; the ninth is the *throat*, which performs the part of a flute; and the tenth the *lungs*, which supply the place of bellows.

Pythagoras, and, afterwards, Plato, make the Muses the soul of the planets in our system; from whence the imaginary music of the spheres (*x*).

The Pythagoreans and Platonicians supposed the universe itself, and all its parts, to be formed by the principles of harmony. And this supposition does not seem to have been merely figurative; there are traces of the harmonic principle scattered up and down sufficient to make us look on it as one of the great and reigning principles of the inanimate world; and though we have no proof, or indeed any reason to believe, that the Greeks were acquainted with the foundation of some of their philosophical opinions, yet what that very sagacious philosopher, Mr. Maclaurin, observes (*y*), concerning the astronomy of Pythagoras, seems highly probable. "When we find, says he, their accounts (i. e. of the Greeks) to be very imperfect, it seems reasonable to suppose they had some hints only, from some more knowing nations, who had made greater advances in philosophy."

Those more knowing nations I suppose to have been the Egyptians, from whom the first and great outlines of every art and science originally came. Maclaurin gives us one instance

(*x*) The comparison and union of the elements of astronomy and music are of much higher antiquity than the time of Pythagoras, if the hymn to Apollo, which

is attributed to Orpheus, be genuine. See *Orpheus Hymns*, p. 226.

(*y*) *Phil. Discov. of Newton*, &c. p. 35.

of the Pythagorean doctrine, which could hardly be supposed to be of Greek original, *the harmony of the spheres*, and which, in conformity with Dr. Gregory, he explains as follows: "If we should suppose musical chords extended from the sun to each planet, that all these chords might become unison, it would be requisite to encrease or diminish their tensions, in the same proportions as would be sufficient to render the gravities of the planets equal; and from the similitude of those proportions, the celebrated doctrine of the harmony of the spheres is supposed to have been derived." Certain as this harmonic coincidence is now become, till Sir Isaac Newton demonstrated the laws of gravitation in relation to the planets, it must have passed for the dream of an Utopian philosopher (z).

BACCHUS.

This personage seems to have acted too important a part in musical mythology to be omitted: for though he is seldom named in modern times but as a sensual encourager of feast and jollity, he was regarded in a more respectable light by the ancients, who worshipped him in different countries under the following appellations: in Egypt, he was called *Osiris*; in Myfia, *Fanaces*; in India, *Dionysius*; *Liber*, throughout the Roman dominions; *Adoneus*, in Arabia; and *Pentheus*, by the Lucanians. Mythologists furnish reasons for all these different names given to the same God, which may be seen in the second volume of Banier's *Mythology*.

It is natural to suppose that the Greeks and Romans, as usual, bestowed upon the *one* Bacchus which they worshipped, the several actions and attributes of the *many* divinities known by that name, and by other equivalent denominations in different countries. However, antiquity chiefly distinguished two Gods

(z) See *Principles and Power of Harmony*, p. 146.

under the title of Bacchus : that of Egypt, the son of Ammon, and the same as Osiris ; and that of Thebes in Bæotia, the son of Jupiter and Semele.

The Egyptian Bacchus was brought up at Nyfa, a city of Arabia Felix, whence he acquired the name of *Dionysius*, or the God of Nyfa, and this was the conqueror of India. Though this Bacchus of the Egyptians was one of the elder Gods of Egypt, yet the son of Semele was the youngest of the Grecian deities. Diodorus Siculus tells us, that Orpheus first deified the son of Semele by the name of Bacchus, and appointed his ceremonies in Greece, in order to render the family of Cadmus, the grandfather of the Grecian Bacchus, illustrious.

The Great Bacchus, according to Sir Isaac Newton (a), flourished but one generation before the Argonautic expedition. This Bacchus, says Hermippus (b), was potent at sea, conquered eastward as far as India, returned in triumph, brought his army over the Hellespont, conquered Thrace, and left music, dancing, and poetry there. And according to Diodorus Siculus, it was the son of Semele who invented farces and theatres, and who first established a music school, exempting from all military functions such musicians as discovered great abilities in their art ; on which account, says the same author, musicians formed into companies, have since frequently enjoyed great privileges.

It has already been observed, that the dithyrambics which gave birth to dramatic representations, are as ancient as the worship of Bacchus in Greece ; and there is little doubt but that the ceremonies of his mysteries gave rise to the pomp and illusions of the theatre. Many of the most splendid exhibitions upon the stage for the entertainment of the people of Athens and Rome, being performed upon the festivals of Bacchus, gave occasion to the calling all those that were employed in them, whether for singing, dancing, or reciting, *servants of Bacchus*.

(a) Chron. p. 191.

(b) Athenæus, lib. 1.

Pausanias, in his *Attics*, speaks of a place at Athens, consecrated to *Bacchus*, the *singer*; thus named, he says, for the same reason as *Apollo* is called the chief, and conductor of the *Muses*. Whence it should seem that *Bacchus* was regarded by the Athenians not only as the God of wine, but of *song*; and it must be owned, that his followers, in their cups, have been much inclined to singing ever since. Indeed we are certain, that in none of the orgies, processions, triumphs, and festivals, instituted by the ancients to the honour and memory of this prince of *bons vivans*, music was forgotten, as may be still gathered from ancient sculpture, where we find not only that musicians, male and female, regaled him with the lyre, the flute, and with song; but that he was accompanied by fawns and satyrs playing upon timbrels, cymbals, bagpipes, and horns; these *Suidas* calls his minstrels; and *Strabo* gives them the appellations of *Bacchi*, *Sileni*, *Satyri*, *Bacchæ*, *Lenæ*, *Thyæ*, *Mamillones*, *Naiades*, *Nymphæ*, and *Tityri*.

These representations have furnished subjects for the finest remains of ancient sculpture (c); and the most voluptuous passages of ancient poetry are descriptions of the orgies and festivals of *Bacchus*.

The *Orgia*, or feasts and sacrifices performed in honour of this God in Greece, were chiefly celebrated on the mountains of Thrace by wild distracted women called *Bacchæ* (d). The *Orgia* were likewise called *Orphica*, from their founder *Orpheus*. However, *Servius* says, that at first *Orgia* was a common name for all kinds of sacrifices among the Greeks, and of the same import with the word *ceremoniæ* among the Romans. *Virgil* calls the feasts of *Bacchus* *Orgia triterica*, from their being celebrated once in three years.

(c) See *Mich. Angelo*; *de la Chaussée*; *Montfaucon*; & *Gori*.

(d) The Orgies of *Bacchus* have furnished *Æschylus* with a subject for one of his tragedies, from whence may be acquired a truer idea of them, before their corruption, than from any other remains of antiquity.

They had certainly their rise in Egypt, where Osiris was the model of the Grecian Bacchus; from thence they passed into Greece, Italy, Gaul, and were adopted almost throughout the whole pagan world. They were at first performed with simplicity and decorum; but afterwards they degenerated into so much folly and licentiousness, that historians assure us the debaucheries practised in them during the night time were so enormous, as to oblige the Roman senate, in the 556th year of the city, 186 B. C. to abolish them entirely throughout the Roman dominions (*e*).

Modern writers upon mythology pretend to inform us in what these orgies consisted, as minutely as if they had been initiated; but it is hardly possible for credulity itself to imagine, that what was so great a mystery to the ancients themselves, should be no secret now.

All we can be certain of, at this distance of time, is, that Greece had three solemnities known by the name of *Orgia*, which were dedicated to Bacchus, to Cybele, and to Ceres; and that each of them had many ceremonies peculiar to itself: the present enquiries, however, shall be confined to the music which accompanied the public processions of Bacchus.

The orgies being a commemoration of the march of the elder Bacchus into India, and that prince having had in his train musicians of both sexes, satyrs, and fawns, or men equipped like fawns and satyrs, these were afterwards employed in the processions and orgies, and formed into bands of music, playing upon drums and cymbals, and crying out *Evohe Bacche!*

In the Justinian garden at Rome there is a marble vase of most precious workmanship, upon which is a representation of these Orgies of Bacchus. This vase, from the beauty of the sculpture, is supposed to be by the hand of Saurus (*f*). The whole pomp of one of these processions is there admirably re-

(*e*) Livy, *Dec. 4. lib. xxix. cap. 8, et seq.*

(*f*) It is from thence that the drawings

of the instruments, Plate IV. No. 6, and several in Plate V, have been taken.

presented;

presented ; in which are introduced Bacchus, the Bacchanals, the Mænades, the players on flutes, matrons and virgins, with the Crotalum, or cymbalum, and tympanum ; fawns and satyrs, holding in their hands vases and cups ; priests leading the victims destined for sacrifice, such as the boar, the he-goat, and the bull ; and, lastly, old Silenus, drunk, upon his ass, which he is hardly able to guide.

With respect to Bacchanalian songs, as the ancient Greeks, and modern French have at all times had the best wine to drink, they seem to have been the most happy in singing its praises. Anacreon will authorise this opinion with respect to the Greeks, and the French have many Anacreons ; among whom may be numbered the abbé de Chaulieu, La Chapelle, La Fare, and St. Aulaire.

But Bacchus is said by Diodorus (g) to have invented *Beer*, for the use of mankind in such parts of the globe as are unfit for the culture of the grape ; and our gluey potations, with the black juice of Oporto, have sometimes inspired the bards of this island with wit and jollity in their drinking songs. And indeed our *Catches*, by the ingenuity of the musical composer, are perhaps fraught with more pleasantry, and are productive of more genuine mirth, than the Bacchanalian hymns of any other people on the globe.

C H A P. II.

Of the Terrestrial, or Demi-Gods.

HAVING tried to trace the opinions of the wisest men among the Greek historians, philosophers, and poets, concerning the musical dispositions and abilities of the greater order of divinities during their mortal state upon earth, my

(g) *Lib. iv.*

next attempt will be to collect what has been thought most consonant to reason and probability, concerning the *Demi-Gods*.

Among these, *Pan* seems to merit the first place (*h*). The abbé Banier remarks, that if ever the Greeks corrupted ancient history, it was in fabricating the fable of *Pan*. According to them, says Herodotus, Hercules Dionysius, or Bacchus, and *Pan*, were the last of all the Gods: however, in the opinion of the Egyptians, *Pan* was one of the eight great divinities that formed the first class in their theology, which were the most powerful and the most ancient of all.

Diodorus makes him one of the attendants upon *Osiris*, in his Indian expedition. “*Osiris*, says this author, took with him *Pan*, a person much respected throughout his dominions; for he had not only his statue afterwards placed in all the temples, but a city was built in the Thebaid, which, in honour of *Pan*, was called *Chemmis*, or *Chammo*, a word that signifies in the Egyptian language, the city of *Pan*.”

The same author, however, tells us, that he was the leader of a troop of fauns and satyrs, or wild and rustic men, much addicted to singing, dancing, and feats of activity, who were presented to *Osiris* in Ethiopia; and with whom that prince was so much pleased, that he retained them in his service.

He was also the inventor of the instrument called the *syrinx*, or *fistula*; which invention has given birth to a pretty fable in *Ovid's Metamorphoses* (*i*).

A nymph of late appear'd, as *Dian* chaste,
Whose beauteous form all other nymphs surpass'd;
The pride and joy of fair *Arcadia's* plains,
Belov'd by deities, ador'd by swains,

(*h*) *Julian. Aurelius de Cognominib. Deor.* XV. *Ab. De clauſtre Dizion. Mitolog.* tom. *Gentil. Lil. Gyraldus Hiſt. Deor. Synt.* iii. p. 41. (i) *Lib. i.*

Syrinx her name ; by sylvans oft pursu'd,
As oft would she the wanton Gods delude.

Descending from Lycæus, Pan admires
The matchless nymph, and burns with new desires.
A crown of pine upon his head he wore,
And vainly strove her pity to implore :
For ere he could begin, she took her flight,
And, wing'd by fear, she soon was out of sight,
Nor stay'd to hear the courtship of the God,
But bent her course to Ladon's gentle flood ;
There by the river stopt, and tir'd before,
Relief from water-nymphs her pray'rs implore.
Now while the am'rous God, with speedy pace
Just thought to strain her in a fond embrace,
He fills his arms with reeds, new rising on the place.
And while he sighs, his ill success to find,
The tender canes were shaken by the wind ;
And breath'd a mournful air, unheard before,
Which greatly Pan surpris'd, yet pleas'd him more.
Admiring this new music, Thou, he said,
Who can'st not be the partner of my bed,
At least shalt be the consort of my mind,
And often, often to my lips be join'd !
The tuneful reeds he form'd, and wax'd with care,
Which still retain the name of his ungrateful fair.

DRYDEN.

Pan was regarded by the Egyptians, after his apotheosis, as the God who presided over the whole universe, as Πάν, *omne*, implies. He represented nature and festivity, and was God of the woods and fields, wholly taken up with the pleasures of a country life ; dancing constantly with the fauns and satyrs, and running after the nymphs, to whom he was such a terror, that

it

it is supposed the word *Panic* is derived from *Panici terrores*, with which those who were said to have seen him, were seized. Apuleius (*k*), however, gives an agreeable description of him. "By chance the God, Pan, happened to be seated on a little eminence near a river, and, always constant in his love to the nymph Syrinx, transformed into a reed, he taught her to produce all kinds of agreeable sounds, while his goats were skipping round him, and feeding on the banks."

Lucian describes him as the companion, minister, and counsellor of Bacchus. He was a kind of *Scrub*, a drudge, fit for *all work*, having been occasionally employed in the capacity of shepherd, musician, dancer, huntsman, and soldier. In short, he served not only as *maestro di capella*, in directing the Bacchanals, but was so expert in playing upon flutes, and was such an excellent piper on the fistula, that Bacchus was never happy without him. We have the authority of the grave Virgil (*l*), and of the sentimental and pious Plato (*m*), for his attributes.

After Pan, it seems necessary to speak of the satyrs, of whom the oldest, according to Pausanias, were called Sileni, from Silenus, the governor of Bacchus in his youth, as a hymn attributed to Orpheus, informs us. Silenus was so notable a musician, that he is not only said to have invented musical instruments, but to have had the courage, like Marsyas, to challenge even Apollo himself to a trial of skill: though we find by the catastrophe that he escaped with a whole skin (*n*).

Shepherds dressed in goat's skins have been thought by some to have furnished the idea of satyrs with goat's feet. But it is the opinion of a modern writer (*o*), that the Orang-outang has been the prototype of all the fauns, satyrs, Pans, and *Sileni*, described by the ancient poets, and whose forms are come down to us in the works of the painters and sculptors of antiquity;

embellished

embellished or disfigured, according to the fancy or genius of the authors; who, having no real models, have given an unbounded scope to imagination in representing them. And yet these animals seem to have been much more numerous formerly than at present; witness the large troops to which Alexander, when in India, prepared to give battle; and the attack made by Hanno on another large body of them, in an island on the coast of Africa, where he took three of the females, whose skins were deposited in the temple of Juno, and found there by the Romans at the taking of Carthage (p)."

Satyr is a name given by some authors, says M. de Buffon, to the *Orang-outang*, or man of the woods, an animal that differs in form less from man than the Ape, and is only to be found in Africa, and the southern parts of Asia (q). Dr. Tyson, and the celebrated anatomist Cowper, who jointly dissected one of these animals, found in him more specific marks of resemblance to man, than to any other creature (r).

Since the interior parts of Africa and India have been better known, this large species of Ape, equal in size and strength to man, and as fond of women as of his own females, has been frequently seen. This animal arms himself with stones in attacking his enemies, and sticks in defending himself; and, besides his being without a tail, and having a flat face, his arms, hands, fingers, and nails, are like those of human creatures, and he always walks upright upon his two hinder legs. He has a kind of face and features much resembling those of man, with ears of the same form, hair upon his head, and a beard on his chin: so that the civilized Indians make no scruple of ranking him among the human species by the name of *Orang-outang*, or wild man; though the Negroes, almost equally wild, and quite as ill-favoured, not reflecting that man is more or less exalted, in proportion as his reason is culti-

(p) Strabo, lib. xv. and *Hannonis Periplum*.

(q) *Hist. Nat.* tom. ix.

(r) *Anat. of the Ourang-outang*, London. 1699. 4to.

vated, have given them the name of *Pongo*, which implies a beast, and not a man. But men with vices similar to those of goats and monkeys, have more frequently furnished ideas of a resemblance between them and those animals, than their figures. This *Orang-outang*, or *Pongo*, is indeed only an animal of the brute kind, though of so singular a nature, that man can never behold him without a secret horror in comparing him with himself, or without being convinced that his own body is not the most essential part of his nature.

Next to the Satyrs, it seems requisite to say something of the *Sirens*, those celebrated songstresses of Sicily, who were ranked among the Demi-gods, as well as Demi-reps, of antiquity. Hyginus places their birth among the consequences of the rape of Proserpine. Others make them daughters of the river Acheloüs, and one of the Muses (s).

— O ye nymphs that from the flood descend,
 What fault of yours the Gods could so offend,
 With wings and claws your beauteous forms to spoil,
 Yet save your maiden face, and winning smile?
 Were you not with her, in Pergusa's bow'rs
 When Proserpine went forth to gather flow'rs?
 Since Pluto in his car the goddess caught,
 Have you not for her in each climate fought?
 And when on land you oft had search'd in vain,
 You wish'd for wings to cross the pathless main.
 The earth and sea were witnesses to your care:
 The Gods were easy, and return'd your pray'r;
 With golden wings o'er foamy waves you fled,
 And to the sun your plummy glories spread:
 But left the soft enchantment of your songs
 And the sweet music of your flattering tongues,
 Should quite be lost, as courteous fates ordain,
 Your voice and virgin beauty still remain. GARTH'S Ovid.

(s) Ovid *Met.* lib. v.

The number of the sirens was three, and their names Parthenope, Lygea, and Leucosia. Some make them half women and half fish; others, half women and half birds. There are antique representations of them still subsisting, under both these forms.

On an Etruscan vase, in the grand duke's collection at Florence, the middle Siren holds a *fyringa*, with seven pipes; another plays on the lyre with the plectrum, and the third on a *monaulos*, or single pipe. These have wings, and birds feet (*t*); and in the *Museo* at Portici, there is a fine piece of antique Mosaic, dug out of Herculaneum, which represents one of the Sirens in the act of singing, another playing upon the flute, and the third upon the lyre.

Pausanias tells us that the Sirens, by the persuasion of Juno, challenged the Muses to a trial of skill in singing; and these having vanquished them, plucked the golden feathers from the wings of the Sirens, and formed them into crowns, with which they adorned their own heads. And it was, perhaps, in allusion to this circumstance, that the proverbial phrase originated, of one person pluming himself with the feathers, or talents, of another.

The Argonauts are said to have been diverted from the enchantment of their songs, by the superior strains of Orpheus: Ulysses, however, had great difficulty in securing himself from seduction. Circe prepares him for the conflict by the following picture and precepts (*u*):

Next where the *Sirens* dwell you plow the seas,
Their song is death, and makes destruction please.
Unblest the man, whom music wins to stay
Nigh the curst shore, and listen to the lay:
No more that wretch shall view the joys of life,
His blooming offspring, or his beauteous wife!

Fly swift the dangerous coast! let every ear
Be stop'd against the song! 'tis death to hear!

(*t*) See *Gori Mus. Etrusc.* Class ii. p. 288.

(*u*) *Odys.* lib. xii. ver. 51.

Firm to the mast thyself with chains be bound,
 Nor trust thy virtue to th' enchanting sound.
 If mad with transport, freedom thou demand,
 Be every fetter strain'd, and added band to band.

And the hero himself, upon his arrival on the coast of Sicily, addresses his companions in the following admirable lines :

O friends ! O ever partners of my woes !
 Attend, while I what heav'n foredooms disclose,
 Hear all ! fate hangs o'er all ! on you it lies
 To live or perish ; to be safe, be wise !
 In flow'ry meads the sportive fires play,
 Touch the soft lyre, and tune the vocal lay ;
 Me, me alone, with fetters firmly bound,
 The Gods allow to hear the dangerous sound.

Then follows the account which Ulysses himself gives of them (x).

While yet I speak the winged galley flies,
 And lo ! the firen shores like mists arise.
 Sunk were at once the winds ; the air above,
 And waves below, at once forgot to move !
 Some dæmon calm'd the air, and smooth'd the deep,
 Hush'd the loud winds, and charm'd the waves to sleep.
 Now ev'ry sail we furl, each oar we ply,
 Lash'd by the stroke, the frothy waters fly :
 The ductile wax, with busy hands I mold,
 And cleft in fragments, and the fragments roll'd ;
 Th' aerial region now grew warm with day,
 The wax dissolv'd beneath the burning ray ;
 Then every ear I barr'd against the strain,
 And from access of phrenzy lock'd the brain.
 Now round the mast, my mates the fetters roll'd,
 And bound me limb by limb, with fold on fold.

(x) Ibid.

Then

Then bending to the stroke, the active train,
Plunge all at once their oars, and cleave the main.

While to the shore the rapid vessel flies,
Our swift approach the siren quire descries;
Celestial music warbles from their tongue,
And thus the sweet deluders tune the song.

O stay! O pride of Greece, Ulysses stay,
O stop thy course, and listen to our lay!
Blest is the man ordain'd our voice to hear,
The song instructs the soul, and charms the ear.
Approach! thy soul shall into raptures rise,
Approach! and learn new wisdom from the wise!

We know whate'er the kings of mighty name
Atchiev'd at Ilion in the field of fame;
Whate'er beneath the sun's bright journey lies,
O stay, and learn new wisdom from the wise! (y)

Thus the sweet charmers warbled o'er the main,
My soul takes wing to meet the heav'nly strain;
I give the sign, and struggle to be free:
Swift row my mates, and shoot along the sea;
New chains they add, and rapid urge the way,
Till dying off, the distant sounds decay;
Then scudding swiftly from the dang'rous ground,
The deafen'd ear unlock'd, the chains unbound.

Pope, in his note on this passage, says, "there are several things remarkable in this short song of the sirens: one of the first words they speak is the name of Ulysses; this shews that they had a kind of omniscience; and it could not fail to raise the curiosity of a wise man to be acquainted with persons of such extensive knowledge. The song is well adapted to the character of Ulysses; it is not pleasure or dalliance with which

(y) There is a remarkable similitude between this promise of wisdom made by the Sirens to Ulysses, and that of knowledge from the tree of life, which was of-

fered to our first parents, by the serpent. Gen. iii. *In the day ye eat thereof, then your eyes shall be opened; and ye shall be as Gods, knowing good and evil.*

they

they tempt that hero, but a promise of wisdom, and a recital of the war of Troy, and his own glory. Homer, says Cicero, saw that his fable could not be approved, if he made his hero to be taken with a mere song: the Sirens therefore promise knowledge, the desire of which might probably prove stronger than the love of his country. To desire to know all things, whether useful or trifles, is a faulty curiosity; but to be led by the contemplation of things great and noble, to a thirst of knowledge, is an instance of greatness of soul."

Again, in his notes to the twelfth book of the *Odyssey*, "The critics have greatly laboured to explain what was the foundation of this fiction of the Sirens. We are told by some that the Sirens were queens of certain small islands, named *Sirenuſæ*, that lie near Capræa in Italy, and chiefly inhabited the promontory of Minerva, upon the top of which that goddess had a temple, as some affirm, built by Ulyſſes. Here there was a renowned academy, in the reign of the Sirens, famous for eloquence and the liberal ſciences, which gave occaſion to the invention of this fable of the ſweetneſs of the voice, and attracting ſongs of the Sirens. But why then are they fabled to be deſtroyers, and painted in ſuch dreadful colours? We are told that at laſt the ſtudents abuſed their knowledge, to the colouring of wrong, the corruption of manners, and the ſubverſion of government: that is, in the language of poetry, they were feigned to be transformed into monſters, and with their muſic to have enticed paſſengers to their ruin, who there conſumed their patrimonies, and poiſoned their virtues with riot and effeminacy. The place is now called Maſſa. Some writers tell us of a certain bay, contracted within winding ſtreights and broken cliffs, which by the ſinging of the winds, and beating of the waters, returns a delightful harmony, that allures the paſſenger to approach, who is immediately thrown againſt the rocks, and ſwallowed up by the violent eddies. Thus Horace moralizing, calls idleneſs a Siren,

—*Vitanda*

—— *Vitanda est improba siren.*

Desidia——

But the fable may be applied to all pleasures in general, which if too eagerly pursued, betray the incautious into ruin; while wise men, like Ulysses, making use of their reason, stop their ears against their insinuations."

All ancient authors agree in telling us, that Sirens inhabited the coast of Sicily. The name, according to Bochart, who derives it from the Phœnician language, implies a *songstress*. Hence it is probable, that in ancient times there may have been excellent fingers, but of corrupt morals, on the coast of Sicily, who by seducing voyagers, gave rise to this fable. And if this conjecture be well founded, I was too hasty in declaring that the Muses were the only pagan divinities who preserved their influence over mankind in modern times; for every age has its *Sirens*, and every *Siren* her votaries; when beauty and talents, both powerful in themselves, are united, they become still more attractive.

C H A P. III.

Concerning the Music of Heroes and Heroic Times.

Inventas aut qui vitam excoluere per artes,
Quique sui memores alios fecere merendo (z).

IT has been the opinion of the greatest poets, and the most ancient historians, that in the early ages of the world the chief employment of princes was to tend their flocks, and to amuse themselves with rustic songs, accompanied by rude and artless instruments.

(z) Worthies, who life by useful arts refin'd,
With those, who left a deathless name behind,
Friends of the world, and fathers of mankind!

PITT'S *Æneid* of Virgil, Book VI.

Thee

The poetical descriptions of the golden age are pleasing pictures of an innocent life, and simplicity of manners; Ovid and Lucretius seem to have exhausted the subject.

But the pastoral kings of Egypt, and the shepherds of Arcadia, have furnished subjects for a more elegant and polished species of poetry, without the admission of vice or luxury.

After this, when mankind, not content with the natural and spontaneous productions of the earth, obtained an artificial increase by tillage,

The ploughman then, to sooth the toilsome day,
Chanted in measur'd feet, his sylvan lay;
And seed-time o'er, he first in blithsome vein,
Pip'd to his household Gods the hymning strain (a).

GRAINGER.

In process of time, when the human mind became more enlarged and cultivated; when the connexions and interests of men and states became more complicated, music and poetry extended their influence, and use, from the field to the city; and those who before only amused themselves while tending a flock of sheep, or herd of cattle, were now employed to sing either with the voice alone, or accompanied with instruments, the mysteries of religion, or the valiant deeds performed by heroes in defence of their country. Of this use of poetry and music, innumerable instances may be found in Homer and Virgil. Indeed *singer* was a common name among the Hebrews, Greeks, Romans, and other ancient people, for poet and musician; employments which, with them, were inseparable, as no poetry was written but to be sung, and little or no music composed but as an accompaniment to poetry (b).

(a) *Agricola assiduo primum satiatum
aratro,
Cantavit certo rustica verba pede.
Et satur arenti primum est modulatus avena
Carmen, ut ornatos diceret ante Deos.*

Tibul. lib. ii. Eleg. 1.

(b) Aristotle in his *Poetics*, lib. viii. cap. 5. Quintil. de *Inst. Orator.* lib. i. cap. 10. and Cicero de *Orat.* lib. iii. are very full upon this subject.

Hence

Hence the difficulty of discriminating the effects attributed to music, from those of poetry and the other arts, which were then so much connected with music, as to constitute an essential and indispensable part of it. Every thing that depended on proportion was included in the science of *Harmony*. Hence every man of science was necessarily a musician, as the study of *Harmony*, according to its ancient and extensive signification, must have employed a very considerable part of the time spent in the education of those who were intended to fill important and conspicuous employments in the temple, the senate, or the field. This being premised, I shall proceed to speak of the use of music in the times which the Greeks distinguished by the epithet *heroic*, which may more properly be called poetic times; for though little better than a blank in history and chronology, they have notwithstanding been filled up by the poets and fabulists with wonderful events, in the same manner as the vacancy in parts of the Pacific ocean have been filled up by navigators and geographers with whales, with dolphins, and with sea monsters.

In this chapter I shall consider what ancient authors furnish relative to our subject in the times of the *Theban chiefs*, the *Argonauts*, and the *Trojans*, the richest and most fertile periods in all antiquity for poetic and dramatic events, though they are somewhat barren with respect to music. But as little can be said with certainty concerning the *music* of this period, I shall chiefly confine my enquiries to *musicians*, whose names are upon record; and stripping their biography of fiction and allegory, I shall relate only the few historical facts which are to be found concerning them, in authentic remains of antiquity.

So many fables have been devised concerning the first poets and musicians, that a doubt has been thrown even upon their existence. Chiron, Amphion, Orpheus, Linus, and Musæus, are spoken of by the poets and mythologists so hyperbolically, that the time when, and place where they flourished, will ap-

pear to many as little worth a serious enquiry as the genealogy of Tom Thumb, or the chronology of a fairy tale. However, though I am ready to part with the miraculous powers of their music, I am unwilling that persons, whose talents have been so long celebrated, should be annihilated, and their actions cancelled from the records of past times.

“Ev’n from the tomb the voice of nature cries,
Ev’n in their ashes live their wonted fires.”

But there are characters in history superior to the devastations of time ; like those high rocks in the ocean, against which the winds and waves are for ever, in vain, expending their fury. Nor can the fame of Orpheus, Linus, and Musæus, ever be wholly consigned to oblivion, as long as any one alphabet remains in use among mankind. Their works may be destroyed, and their existence doubted, but their names must be of equal duration with the world. The memory of few transactions of importance to mankind has been lost since letters have been found : and if we are ignorant of the history of the Egyptian, Assyrian, and Persian monarchies, it is from their having preceded that period. The first preceptors of mankind, such as are now the subject of my enquiries, had too much business upon their hands in civilizing their savage cotemporaries, to write either the history of their ancestors, or their own. Learning was then in too few hands for all its departments to be filled ; but since its general diffusion, nothing worth recording has been left untold.

It is impossible to particularize within the limits of this work, or even to enumerate, in a General History of an art which has subsisted so many ages as music, all those who have been successful in its cultivation. This would require a biographical work, more voluminous than that of Moreri, or Bayle ; for as all the first poets were likewise musicians, they cannot be separated during the union of their professions. Indeed antiquity

tiquity has left ample materials scattered throughout all literature, for writing the lives of its favourite bards, many of which have been collected by the indefatigable labour of the learned Fabricius (*c*), and M. Burette (*d*), who have both greatly facilitated and abridged my enquiries: the chief difficulties now remaining, are to select such as are most interesting, and to digest them into my work, without allowing them to occupy too large a portion of it, to the exclusion of more important concerns.

Though the Egyptian Thebes is of much higher antiquity than the Grecian, yet this last is so ancient, and its history is so much involved in darkness and poetic fiction, that nothing can be depended upon concerning it, but that it is recorded to have been built by Cadmus, long before the Trojan war, or even the Argonautic expedition; Pausanias, indeed, gives a list of sixteen kings, who reigned at Thebes in Bæotia, but they are rather the heroes of tragedy than real history. Among these is

AMPHION, the twin brother of Zethus, who usurped the crown from Laius, the father of the unfortunate Oedipus. But though Amphion is the first and only Theban musician upon record in these early ages, I shall be the less minute in my account of him, as it is very doubtful whether music had any of those obligations to his genius and talents, which the poets, many ages after the time when he is said to have reigned, bestowed upon him. Homer, indeed, tells us, that to secure the crown which he had usurped, he inclosed the city of Thebes with a wall, fortified with seven gates, and many stately towers: the poet, however, does not say a word of the miraculous power of Amphion's music, or of his building the wall by the sound of his lyre. "For my part, says Pausanias, I believe that Amphion only acquired his musical reputation from his alliance with the family of Tantalus, whose daughter, Niobe, he had married." Pliny (*e*) is of the same opinion; and both these au-

(*c*) *Bib. Græc.*

(*d*) *Mem. des Inscrip.*

(*e*) *Lib. vii. cap. 56.*

thors say, that Amphion learned music in Lydia, and bringing it from thence into Greece, was called the inventor of the Lydian mode.

CHIRON is styled by Plutarch, in his *Dialogue upon Music*, the *wise Centaur*. Sir Isaac Newton places his birth in the first age after Deucalion's deluge, commonly called the Golden Age, and adds, that he formed the constellations for the use of the Argonauts, when he was eighty-eight years old, for he was a practical astronomer, as well as his daughter Hippo (*f*): he may therefore be said to have flourished in the earliest ages of Greece, as he preceded the conquest of the Golden Fleece, and the Trojan war.

He is generally called the son of Saturn and Philyra, and is said to have been born in Thessaly among the Centaurs, who were the first Greeks that had acquired the art of breaking and riding horses; whence the poets, painters, and sculptors, have described and represented them as a compound of man and horse; and perhaps it was at first imagined by the Greeks, as well as the Americans, when they first saw cavalry, that the horse and the rider constituted one and the same animal.

Chiron was regarded by the ancients as one of the first inventors of medicine, botany, and *chirurgery* (*g*); a word which some etymologists have derived from his name. He inhabited a grotto, or cave, at the foot of mount Pelion, which from his wisdom, and great knowledge of all kinds, became the most famous and frequented school throughout Greece. Almost all the heroes of his time were ambitious of receiving his instructions; and Xenophon, who enumerates them, names the following illustrious personages among his disciples: Cephalus, Esculapius, Melanion, Nestor, Amphiaraus, Peleus, Telamon, Meleager, Theseus, Hypolitus, Palamedes, Ulysses, Mnestheus, Diomedes, Castor and Pollux, Machaon and Podalirius, Anti-

lochus,

lochus, Æneas, and Achilles. From this catalogue it appears, that Chiron frequently instructed both fathers and sons; and Xenophon has given a short eulogium upon each, which may be read in his works, and which redounds to the honour of the preceptor. The Greek historian, however, has omitted naming several of his scholars, such as Bacchus, Phoenix, Cocytus, Aristæus, Jason, and his son Medeus, Ajax, and Protefilaus. It is not my intention to characterize all these; I shall only mention such as interest Chiron more particularly.

It is pretended that the Grecian Bacchus was the favourite scholar of the Centaur, and that he learned of this master the revels, orgies, Bacchanalia, and other ceremonies of his worship.

According to Plutarch, it was likewise at the school of Chiron that Hercules studied music, medicine, and justice; though Diodorus Siculus tells us that Linus was the music-master of this hero. These are points which it is now not easy to settle; nor are they of any other consequence to our enquiries, than serving as proofs, that ancient authors all agreed in thinking it natural and necessary for heroes to have been instructed in music. *Nec fides didicit, nec natare*, was, in antiquity, a reproach to every man above the rank of a plebeian.

But among all the heroes who have been disciples of this Centaur, no one reflected so much honour upon him as Achilles, whose renown he in some measure shared, and to whose education he in a particular manner attended, being his grandfather by the mother's side. Apollodorus tells us that the study of music employed a considerable part of the time which he bestowed upon his young pupil, as an incitement to virtuous actions, and a bridle to the impetuosity of his temper. One of the best remains of antique painting now subsisting is a picture upon this subject, dug out of Herculaneum, in which Chiron is teaching the young Achilles to play on the lyre.

The

The death of this philosophic musician was occasioned, at an extreme old age, by an accidental wound in the knee with a poisoned arrow, shot by his scholar, Hercules, at another. He was placed after his death by Musæus among the constellations, through respect for his virtues, and in gratitude for the great services which he had rendered the people of Greece (*h*).

The ancients have not failed to attribute to him several writings; among which, according to Suidas (*i*), are *precepts*, *υποθηκας*, in verse, composed for the use of Achilles; and a medicinal treatise on the *Diseases incident to Horses*, and other quadrupeds, *ἵππιατρικον*; the lexicographer even pretends, that it is from this work that the *Centaur* derived his name.

Fabricius (*k*) gives a list of the works attributed to Chiron, and discusses the claims which have been made for others to the same writings; and in Vol. xiii. he gives him a distinguished place in his Catalogue of ancient Physicians.

Next to Chiron, LINUS, and Orpheus, seem to have been the most ancient poets and musicians of Greece; but to determine whether Linus was the master of Orpheus, or Orpheus of Linus, would be as vain to attempt, as difficult to accomplish. All that can be done at this distance of time, is to compare the opinions of ancient writers upon the subject, and to incline to the most numerous and respectable evidence: and in pursuing this method, it appears, that the majority are in favour of the superior antiquity of Linus. No testimony places him in a more remote period, or does more honour to his memory, than that of Herodotus, already cited (*l*). According to archbishop Usher, he flourished about 1280 years before Christ, and he is mentioned by Eusebius (*m*) among the poets who

(*h*) Sir Isaac Newton says, in proof of the constellations being formed by Chiron and Musæus for the use and honour of the Argonauts, that nothing later than that expedition was delineated on the original sphere; according to the same author, Chiron lived till after the Argonautic ex-

pedition, in which he had two grandsons. *Chronol.* p. 151.

wrote

wrote before the time of Moses. Diodorus Siculus, who is very diffusive in his account of Linus (*n*), tells us, from Dionysius of Mitylene, the historian, who was cotemporary with Cicero, that Linus was the first among the Greeks who invented verse and music, as Cadmus first taught them the use of letters. The same writer likewise attributes to him an account of the exploits of the first Bacchus, and a treatise upon Greek Mythology, written in Pelasgian characters, which were also those used by Orpheus, and by Pronapides, the preceptor of Homer. Diodorus says that he added the string *Lichanos* to the Mercurian lyre, and gives to him the invention of rhythm and melody, which Suidas, who regards him as the most ancient of lyric poets, confirms (*o*). He is said by many ancient writers to have had several disciples of great renown, among whom were Hercules, Thamyris, and, according to some, Orpheus.

Hercules, says Diodorus, in learning of Linus to play upon the lyre, being extremely dull and obstinate, provoked his master to strike him, which so enraged the young hero, that instantly seizing the lyre of the musician, he beat out his brains with his own instrument. Heroes are generally impatient of controul, and not often gifted with a taste for refined pleasures; hence, relying merely on corporal force, their mental faculties, feeble perhaps by nature, are seldom fortified by education.

With respect to the dirges, which Plutarch, from Heraclides of Pontus, mentions as written by Linus, I find no account of them in any other ancient author. It appears, however, that his death has given birth to many songs of that kind, which have been composed in honour of his memory. A festival was likewise instituted by the name of *Linia*, for the celebration of his virtues; and so numerous were his inventions, and various the periods and places in which different authors fix them,

(*n*) *Lib. iii. cap. 35.*

(*o*) Mr. Marpurg tells us, I know not from whence, that Linus invented *cat-gut* strings for the use of the lyre, which, be-

fore his time, was only strung with thongs of leather, or with different threads of flax twisted together. *Geschichte der Musik.* Page 17.

that:

that some have tried to reconcile these jarring accounts, by supposing that there were three several illustrious personages of that name; a supposition which I shall not pretend either to affirm or deny.

“The Thebans, says Pausanias (*o*), assure us, that Linus was buried in their city, and that Philip, the son of Amyntas, after the battle of Chæronæa, which was fatal to the Greeks, excited by a dream, removed his bones into Macedon, from whence, by counsel received in another dream, he sent them back to Thebes; but time has so defaced his tomb, that it is no longer discoverable.”

Homer (*p*) has paid a tribute to the memory of Linus, in his description of the shield of Achilles.

To these a youth awakes the warbling strings,

Whose tender lay the fate of Linus sings;

In measur'd dance behind him move the train,

Tune soft the voice, and answer to the strain (*q*). POPE.

ORPHEUS is one of the most ancient and venerable names among the poets and musicians of Greece. His reputation was established as early as the time of the Argonautic expedition, in which he was himself an adventurer; and is said by Apollonius Rhodius not only to have incited the Argonauts to row by the sound of his lyre, but to have vanquished, and put to silence the firens, by the superiority of his strains (*r*). Yet, notwith-

(*o*) In *Bæotic*.

(*p*) *Lib. xviii. ver. 569.*

(*q*) *Lib. xviii.* In his notes upon these verses, Mr. Pope says, “there are two interpretations of them in the original. That which I have chosen is confirmed by the testimony of Herodotus, *lib. ii.* and Pausanias, *Bæoticis*. Linus was the most ancient name in poetry, the first upon record who invented verse and measure amongst the Greeks. There was a solemn custom among them of bewailing annually the death of their first poet. Pausanias informs us, that before the yearly sacrifice to the Muses on Mount Helicon, the obsequies of Linus were performed, who

had a statue and altar erected to him in that place. Homer alludes to that custom in this passage, and was doubtless fond of paying this respect to the old father of poetry.”

(*r*) This celebrated voyage, which is the first epoch in the Grecian history, upon which any stress can be laid, was undertaken, according to archbishop Usher, and the authors of the *Universal History*, 1280 B. C. Dr. Blaire places it 1263; and Sir Isaac Newton, and Dr. Priestley, 936 years before the same period; but all chronologers agree in fixing this enterprize near a century before the Trojan war.

standing

standing the great celebrity he had so long enjoyed, there is a passage in Cicero, which says, that Aristotle, in the third book of his *Poetics*, which is now lost, *doubted if such a person as Orpheus ever existed* (s); but as the work of Cicero, in which this passage occurs, is in dialogue, it is not easy to discover what was his own opinion upon the subject, the words cited being put into the mouth of Caius Cotta. And Cicero, in other parts of his writings, mentions Orpheus as a person of whose existence he had no doubts. There are several ancient authors, among whom is Suidas, who enumerate five persons of the name of Orpheus, and relate some particulars of each. And it is very probable that it has fared with Orpheus as with Hercules, and that writers have attributed to *one* the actions of *many*. But, however that may have been, I shall not attempt to collect all the fables that poets and mythologists have invented concerning him; they are too well known to need insertion here. I shall, therefore, in speaking of him, make use only of such materials as the best ancient historians, and the most respectable writers among the moderns, have furnished towards his history.

Dr. Cudworth, in his *Intellectual System* (t), after examining and confuting the objections that have been made to the being of an Orpheus, and, with his usual learning and abilities, clearly establishing his existence, proceeds, in a very ample manner, to speak of the opinions and writings of our bard, whom he regards not only as the first musician and poet of antiquity, but as a great mythologist, from whom the Greeks derived the Thracian religious rites and mysteries.

“It is the opinion, says he, of some eminent philologers (u) of latter times, that there never was any such person as Orpheus, except in Fairy-land; and that his whole history was nothing but a mere romantic allegory, utterly devoid of truth

(s) Orpheum Poetam docet Aristoteles
nunquam fuisse. De Nat. Deor. l. i. sec. 38.

(t) Page 294. 2d Edition.

(u) G. I. Vossius *De. Ar. Po. cap. 13.*

and reality. But there is nothing alledged for this opinion from antiquity, except the one passage of Cicero concerning Aristotle, who seems to have meant no more than this, that there was no such poet as Orpheus, anterior to Homer, or that the verses vulgarly called Orphical, were not written by Orpheus. However, if it should be granted that Aristotle had denied the existence of such a man, there seems to be no reason why his single testimony should preponderate against the universal consent of all antiquity, which agrees, that Orpheus was the son of Oeager, by birth a Thracian, the father, or chief founder of the mythological and allegorical theology amongst the Greeks, and of all their most sacred religious rites and mysteries; who is commonly supposed to have lived before the Trojan war, that is, in the time of the Israelitish judges, or at least to have been senior both to Hesiod and Homer, and to have died a violent death, most affirming, that he was torn in pieces by women. For which reason, in the vision of Herus Pamphylus, in Plato, Orpheus's soul passing into another body, is said to have chosen that of a swan, a reputed musical animal, on account of the great hatred he had conceived for all women, from the death which they had inflicted on him. And the historic truth of Orpheus was not only acknowledged by Plato, but also by Isocrates, who lived before Aristotle, in his oration in praise of Busiris; and confirmed by the grave historian Diodorus Siculus (x), who says, that Orpheus diligently applied himself to literature, and when he had learned *τα μυθολογούμενα*, or the mythological part of theology, he travelled into Egypt, where he soon became the greatest proficient, among the Greeks, in the mysteries of religion, theology, and poetry. Neither was this history of Orpheus contradicted by Origen, when so justly provoked by Celsus, who had preferred him to our Saviour; and, according to Suidas, Orpheus the Thracian was the first inventor of the religious mysteries of the Greeks, and that religion

(x) *Lib. iv. cap. 25.*

was thence called *Threskeia*, as it was a Thracian invention. On account of the great antiquity of Orpheus, there have been numberless fables intermingled with his history, yet there appears no reason that we should disbelieve the existence of such a man."

The bishop of Gloucester (*y*) speaks no more doubtfully of the existence of Orpheus, than of Homer and Hesiod, with whom he ranks him, not only as a poet, but also as a theologian, and founder of religion. This learned author has thrown new lights upon the character of Orpheus; our pursuits are somewhat different; it was his business to introduce him to his readers as a philosopher, a legislator, and a mystagogue; and it is mine, after establishing his existence, to rank him among the first cultivators of music and poetry, and to give him that exalted and respectable station among illustrious bards, which has been allowed him by almost all antiquity.

The family of Orpheus is traced by Sir Isaac Newton for several generations: "Sefac passing over the Hellespont, conquers Thrace, kills Lycurgus, king of that country, and gives his kingdom, and one of his singing-women to Oeagrus, the son of Tharops, and father of Orpheus; hence Orpheus is said to have had the Muse Calliope for his mother."

He is allowed by most ancient authors to have excelled in poetry and music, particularly the latter, and to have early cultivated the lyre, in preference to every other instrument; so that all those who came after him were contented to be his imitators; whereas he adopted no model, says Plutarch; for before his time no other music was known, except a few airs for the flute. Music was so closely connected in ancient times with the most sublime sciences, that Orpheus united it not only with philosophy, but with theology. He abstained from eating animal food, and held eggs in abhorrence as aliment, being persuaded that the egg subsisted before the chicken, and was the

(*y*) *Div. Leg.* book ii. sect. 1.

principle of all existence: both his knowledge and prejudices, it is probable, were acquired in Egypt, as well as those of Pythagoras, many ages after.

With respect to his abstaining from the flesh of oxen, Gesner supposes it may have proceeded from the veneration shewn to that animal so useful in tillage, in the Eleusinian mysteries, instituted in honour of Ceres, the Goddess of Agriculture. He might have added that, as these mysteries were instituted in imitation of those established in Egypt, in honour of Osiris and Isis, this abstinence from animal food was of the like origin, and a particular compliment to Apis. But the abbé Fraguier, in an ingenious Dissertation upon the *Orphic Life* (z), gives still more importance to the prohibition; for as Orpheus was the legislator and humanizer of the wild and savage Thracians, who were cannibals, a total abolition of eating human flesh could only be established by obliging his countrymen to abstain from that of every thing that had life.

With respect to theology, Diodorus Siculus tells us, that his father Oeagrus gave him his first instructions in religion, imparting to him the mysteries of Bacchus, as they were then practised in Thrace. He became afterwards a disciple of the Idæi Dactyli in Crete, and there acquired new ideas concerning religious ceremonies. But nothing contributed so much to his skill in theological matters as his journey into Egypt, where being initiated into the mysteries of Isis and Osiris, or of Ceres and Bacchus, he acquired a knowledge concerning initiations, expiations, funeral rites, and other points of religious worship, far superior to any one of his age and country. And being much connected with the descendants of Cadmus, the founder of Thebes in Bæotia, he resolved, in order to honour their origin, to transport into Greece the whole fable of Osiris, and apply it to the family of Cadmus. The credulous people easily received this tale, and were much flattered by the institution of

(z) *Mem. des Inscr. tom. v. p. 117.*

the ceremonies in honour of Osiris. Thus Orpheus, who was held in great veneration at the Grecian Thebes, of which he was become a citizen, admirably adapted this fable, and rendered it respectable, not only by his beautiful verses, and manner of singing them, but by the reputation he had acquired of being profoundly skilled in all religious concerns.

At his return into Greece, according to Pausanias (*a*), he was held in the highest veneration by the people, as they imagined he had discovered the secret of expiating crimes, purifying criminals, curing diseases, and appeasing the angry Gods. He formed and promulgated an idea of a hell, from the funeral ceremonies of the Egyptians, which was received throughout all Greece (*b*). He instituted the mysteries and worship of Hecate among the Eginetes (*c*), and that of Ceres at Sparta.

Justin Martyr says, that he introduced among the Greeks near three hundred and sixty Gods; Hesiod and Homer pursued his labours, and followed the same clue, agreeing in the like doctrines, having all drank at the same Egyptian fountain.

Profane authors look upon Orpheus as the inventor of that species of magic, called *evocation of the manes*, or raising ghosts; and indeed the hymns which are attributed to him are mostly pieces of incantation, and real conjuration. Upon the death of his wife Eurydice, he retired to a place in Thesprotia, called Aornas, where an ancient oracle gave answers to such as evoked the dead. He there fancied he saw his dear Eurydice, and at his departure flattered himself that she followed him; but upon looking behind him, and not seeing her, he was so afflicted, that he soon died of grief (*d*).

There were persons among the ancients who made public profession of conjuring up ghosts, and there were temples where the ceremony of conjuration was to be performed. Pausanias (*e*)

(*a*) *Lib. ix. cap. 30.*

(*b*) *Diod. Sic. lib. i.*

(*c*) *Pausan. lib. ii. cap. 30.*

(*d*) *Id. lib. ix.*

(*e*) *In Bæot.*

speaks of that which was in Thesprotia, where Orpheus went to call up the ghost of his wife Eurydice. It is this very journey, and the motive, which put him upon it, that made it believed he went down into hell.

But it is not only the poets who speak of conjuring up spirits; examples of it are to be found both in sacred (*f*) and profane history. Periander, the tyrant of Corinth, visited the Thesprotians, to consult his wife about something left with her in trust; and we are told by the historians, that the Lacedæmonians having starved Pausanias their general to death, in the temple of Pallas, and not being able to appease his *manes*, which tormented them without intermission, sent for the magicians from Thessaly, who, when they had called up the ghosts of his enemies, so effectually put to flight the ghost of Pausanias, that it never more chose to shew its face.

The poets have embellished this story, and given to the lyre of Orpheus, not only the power of silencing Cerberus, and of suspending the torments of Tartarus, but also of charming even the infernal deities themselves, whom he rendered so far propitious to his entreaties as to restore to him Eurydice, upon condition that he would not look at her, till he had quitted their dominions; a blessing which he soon forfeited, by a too eager and fatal curiosity.

All dangers past, at length the lovely bride
In safety goes, with her melodious guide;
Longing the common light again to share,
And draw the vital breath of upper air:
He first, and close behind him follow'd she,
For such was Proserpine's severe decree.
When strong desires th' impatient youth invade,
By little caution, and much love betray'd:

(*f*) Witch of Endor, 1 Sam. chap. xxviii. ver. 11 and 12.

A fault which easy pardon might receive,
 Were lovers judges, or could hell forgive.
 For near the confines of ethereal light,
 And longing for the glimm'ring of a fight,
 Th' unwary lover cast a look behind,
 Forgetful of the law, nor master of his mind.
 Straight all his hopes exhal'd in empty smoke;
 And his long toils were forfeit for a look.

DRYDEN'S Virgil (g).

Tzetzes (h) explains the fable of his drawing his wife Eurydice from hell by his great skill in medicine, with which he prolonged her life, or, in other words, snatched her from the grave. Æsculapius, and other physicians, have been said to have raised from the dead, those whom they had recovered from dangerous diseases.

The bishop of Gloucester, in his learned, ample, and admirable account of the Eleusinian mysteries, says, "While these mysteries were confined to Egypt, their native country, and while the Grecian law-givers went thither to be initiated, as a kind of designation to their office, the ceremony would be naturally described in terms highly allegorical.—This way of speaking was used by Orpheus, Bacchus, and others; and continued even after the mysteries were introduced into Greece, as appears by the fables of Hercules, Castor, Pollux, and Theseus's descent into hell; but the allegory was so circumstanced, as to discover the truth concealed under it. So Orpheus is said to get to hell by the power of his harp,

Thrēicia fretus citharâ, fidibusque canoris.

VIRG. *Æn.* VI. ver. 119.

that is, in quality of law-giver; the harp being the known symbol of his laws, by which he humanized a rude and barbarous people.—Had an old poem, under the name of Orpheus,

(g) *Georgic* IV.

(h) *Chiliad.* I. Hist. 54. He flourished about 1170.

entitled!

entitled *A Descent into Hell*, been now extant, it would perhaps have shewn us, that no more was meant than Orpheus's initiation."

Many ancient writers in speaking of his death, relate, that the Thracian women, enraged at being abandoned by their husbands, who were disciples of Orpheus, concealed themselves in the woods, in order to satiate their vengeance; and, notwithstanding they postponed the perpetration of their design some time through fear, at length, by drinking to a degree of intoxication, they so far fortified their courage as to put him to death. And Plutarch (*i*) assures us, that the Thracians stigmatized their women, even in his time, for the barbarity of this action (*k*).

Our venerable bard is defended by the author of the *Divine Legation*, from some insinuations to his disadvantage in Diogenes Laertius. "It is true, says he, if uncertain report was to be believed, the mysteries were corrupted very early; for Orpheus himself is said to have abused them. But this was an art the debauched mystæ of later times employed to varnish their enormities; as the detested pederasts of after-ages, scandalized the blameless Socrates. Besides, the story is so ill laid, that it is detected by the surest records of antiquity: for in consequence of what they fabled of Orpheus in the mysteries, they pretended he was torn in pieces by the women; whereas it appeared from the inscription on his monument at Dium in Macedonia, that he was struck dead with lightning, the envied death of the reputed favourites of the Gods."

This monument, at Dium, consisting of a marble urn on a pillar, was still to be seen in the time of Pausanias. It is said, however,

(*i*) *De Ser. Num. Vind.*

(*k*) It is related, that after he had been torn to pieces by the Thracian women, his lyre happening to fall into the Hebrus during the scuffle, was carried to Lesbos, where it was taken up, and deposited in the temple of Apollo. But, according to Lucian, Neanthus, the son of Pythacus the

tyrant, bought it afterwards of the priests, imagining, that by merely touching this instrument, he should draw after him trees and rocks: it is true he succeeded no otherwise than by provoking the dogs in the neighbourhood to tear him to pieces. But though he could not share the fame, he shared the fate of the unfortunate Orpheus.

that

that his sepulchre was removed from Libethra, upon mount Olympus, where Orpheus was born, and from whence it was transferred to Dium by the Macedonians, after the ruin of Libethra, by a sudden inundation, which a dreadful storm had occasioned. This event is very minutely related by Pausanias (l).

Virgil bestows the first place in his Elysium upon the legislators, and *those who brought mankind from a state of nature into society* :

Magnanimi heroës, nati melioribus annis.

At the head of these is Orpheus, the most renowned of the European law-givers ; but better known under the character of poet : for the first laws being written in measure, to allure men to learn them, and, when learnt, to retain them, the fable would have it, that by the force of harmony, Orpheus softened the savage inhabitants of Thrace :

—Threïcius longa cum veste sacerdos

Obloquitur numeris septem discrimina vocum :

Jamque eadem digitis, jam pectine pulsat eburno (m).

Æn. lib. vi. ver. 645.

(l) *Lib. ix.*

(m) It is curious to observe how inaccurately the most elegant writers, and sublime poets, speak of subjects for which they have no taste, and in which they have acquired no knowledge. Our great poet, Dryden, though he has extended Virgil's three lines into four, has but ill expressed the original.

The Thracian bard surrounded by the rest,
There stands conspicuous in his flowing
vest ;

His flying fingers, and harmonious quill,
Strike seven distinguish'd notes, and sev'n
at once they fill.

The latter part of this last verse says nothing to a musician, and, indeed, but little to any one else : the four fingers and thumb of one hand, and the plectrum in the other, could *fill* at most but six notes. Mr. Pitt is still more unhappy in his version :

There Orpheus, graceful in his long attire,
In *seven-divisions* strikes the sounding lyre.

Now, a *division* is, unluckily, a technical term in music, which implies a rapid flight, either with a voice or instrument : when applied to fingering, it tells us that a great number of notes are given to one syllable ; but we are as certain as we can be about any thing that concerns ancient music, that neither the Greeks nor Romans had either the word or thing in the sense which we annex to *division* : and it is but an awkward way of describing an instrument with seven distinct strings, or sounds, to say that it had seven divisions. It seems as if the poet meant no more, by the whole passage, than that “ the Thracian priest (Orpheus) sung to the *seven-stringed Lyre*, upon which he sometimes played with his fingers, and sometimes with the ivory plectrum.”

The seven strings given by the poet in this passage to the lyre of Orpheus, is a circumstance somewhat historical. The first Mercurean lyre had, at most, but four strings. Others were afterwards added to it by the second Mercury, or Amphion, but according to several traditions preserved by Greek historians, it was Orpheus who completed the second tetrachord, which extended the scale to a heptachord, or *seven sounds*, implied by the *septem discrimina vocum*. For the assertion of many writers that Orpheus added two new strings to the lyre, which before had seven, clashes with the claims of Pythagoras to the invention of the octachord, or addition of the sound *Proslambanomenos* to the heptachord, of which almost all antiquity allows him to have been the inventor. And it is not easy to suppose, that the lyre should have been represented in ancient sculpture with four or five strings only, if it had had nine so early as the time of Orpheus, who flourished long before sculpture was known in Greece (*n*).

With respect to the writings of Orpheus, he is mentioned by Pindar as author of the Argonautics, and Herodotus speaks of his Orphics (*o*). His hymns, says Pausanias, were very short, and but few in number; the Lycomides, an Athenian family, knew them by heart, and had an exclusive privilege of singing them, and those of their old poets, Musæus, Onomacritus, Pamphus, and Olen, at the celebration of the Eleusinian mysteries; that is, the priesthood was hereditary in this family (*p*).

Iamblicus tells us, that the poems under the name of Orpheus were written in the Doric dialect, but have since been

(*n*) What is here said concerning the progressive improvements of instrumental music, must be wholly confined to Greece; for proofs have already been given of the Egyptians having been in possession of more perfect instruments than those just mentioned, long before the time when Orpheus is supposed to have flourished.

(*o*) Pindar was born 521 B. C. and Herodotus 484. Euripides and Aristophanes both quote Orpheus; the tragedian

was born 477 years B. C. and the comic poet was his cotemporary. Besides these, Apollonius Rhodius, Horace, Virgil, Ovid, Valerius Flaccus, among the poets; and Plato, Isocrates, Diodorus Siculus, Pausanias, Apollodorus, Hyginus, Plutarch, and many other philosophers, historians, and mythologists, cite his works, and speak of him without throwing the least doubt upon his existence.

(*p*) Suidas gives to Orpheus a son, of the

trans-dialected, or modernised. It was the common opinion in antiquity that they were genuine; but even those who doubted of it, gave them to the earliest Pythagoreans, and some of them to Pythagoras himself, who has frequently been called the follower of Orpheus, and been supposed to have adopted many of his opinions (*q*).

If I have selected with too much sedulity and minuteness whatever ancient and modern writers furnish relative to Orpheus, it has been occasioned by an involuntary zeal for the fame of this musical and poetical patriarch; which, warm at first, grew more and more heated in the course of enquiry; and, stimulated by the respect and veneration which I found paid to him by antiquity, I became a kind of convert to this mystagogue, and eagerly aspired at initiation into his mysteries—in order to reveal them to my readers.

MUSÆUS is more celebrated by ancient writers as a philosopher, astronomer, epic poet, and priest of Ceres, than as a musician; however, he lived in so remote a period, and has so far survived his cotemporaries, that he is one of the few melancholy remains of his age, of which posterity has cherished

the name of Leos, whom Pausanias makes the head of one of the great Athenian tribes; who, by the counsel of the oracle, devoted his three daughters, *Λιονόρα*, *Ψαριτθεα*, *Ευνοπεα*, and *Ευβουλα*, to the safety of the state.

(*q*) Of the poems that are still subsisting under the name of Orpheus, which were collected and published at Nuremberg, 1702, by Andr. Christ. Eschenbach, and which have been since reprinted at Leipzig, 1764, under the title of *OPHREUS APANTA*, several have been attributed to Onimacritus, an Athenian, who flourished under the Pysistratidæ, about 500 years B. C. Their titles are

I. The *Argonautics*, an epic poem.

II. Eighty-six hymns, which are so full of incantations, and magical evocation, that Daniel Heinsius has called them *veram satanæ liturgiam*, the true liturgy of the devil. Pausanias, who made no doubt that the hymns subsisting in his time

were composed by Orpheus, tells us, that, though less elegant, they had been preferred for religious purposes to those of Homer.

III. *De Lapidibus*, a poem on precious stones.

IV. *Fragments*, collected by Henry Stevens.

Orpheus has been called the inventor, or at least the propagator, of many arts and doctrines among the Greeks.

1. The combination of letters, or the art of writing. 2. *Music*, the lyre, or cithara, of seven strings, adding three to that of Mercury. 3. *Hexameter verse*. 4. *Mysteries and theology*. 5. *Medicine*. 6. *Magic and divination*. 7. *Astrology*. Servius upon the sixth *Æneid*, p. 450, says Orpheus first instituted *the harmony of the spheres*. 8. He is said likewise to have been the first who imagined a plurality of worlds, or that the moon and planets were inhabited.

the memory ; he therefore cannot, without injustice, be omitted : for whoever looks into the ingenious and well-digested biographical chart of Dr. Priestley, will find Linus, Orpheus, and Musæus, placed in such barren regions of history, that, like the once beautiful cities of Palmyra and Balbec, they now stand in a desert ; but great and exalted characters are buoyed up by time, and resist the stream of oblivion, which soon sweeps away all such as have not eminently distinguished themselves.

Musæus, according to Plato and Diodorus Siculus, was an Athenian, the son of Orpheus, and chief of the Eleusinian mysteries, instituted at Athens in honour of Ceres ; or, according to others, he was only the disciple of Orpheus ; but from the great resemblance which there was between his character and talents, and those of his master, by giving a stronger outline to the figure, he was called his son, as those were styled the children of Apollo, who cultivated the arts, of which he was the titular God.

Musæus is allowed to have been one of the first poets who versified the oracles. He is placed in the Aurundelian marbles, Epoch 15. 1426 B. C. at which time his hymns are there said to have been received in the celebration of the Eleusinian mysteries. Laertius tells us (*r*), that Musæus not only composed a Theogony, but formed a Sphere for the use of his companions ; yet, as this honour is generally given to Chiron, it is more natural to suppose, with Sir Isaac Newton, that he enlarged it with the addition of several constellations after the conquest of the Golden Fleece. The sphere itself shews that it was delineated after the Argonautic expedition, which is described in the asterisms, together with several other more ancient histories of the Greeks, and without any thing later : for the ship *Argo* was the first long vessel which they had built ; hitherto they had used round ships of burthen, and kept within sight of the shore : but now, by the dictates of the oracle, and consent of

(*r*) *Proem. lib. i.*

the princes of Greece, the flower of that country sail rapidly through the deep, and guide their ship by the stars (s).

Musæus is celebrated by Virgil in the character of Hierophant, or priest of Ceres, at the head of the most illustrious mortals who have merited a place in Elysium. Here he is made the conductor of Æneas to the recess, where he meets the shade of his father, Anchises (t).

A hill near the citadel of Athens was called Musæum, according to Pausanias, from Musæus, who used to retire thither to meditate, and compose his religious hymns, and at which place he was afterwards buried. The works which went under his name, like those of Orpheus, were by many attributed to Onomacritus. Nothing remains of this poet now, nor were any of his writings extant in the time of Pausanias, except a hymn to Ceres, which he made for the Lycomides (u). And as these hymns were likewise set to music, and sung in the mysteries by Musæus himself, in the character of priest, he thence, perhaps, acquired from future times, the title of musician, as well as of poet, the performance of sacred music being, probably, at first confined to the priesthood in these celebrations, as it had been before in Egypt, whence they originated. However, he is not enumerated among ancient musicians by Plutarch; nor does it appear that he merited the title of son and successor to Orpheus for his musical abilities, so much as for his poetry, piety, and profound knowledge in religious mysteries. But notwithstanding the numberless testimonies come down to us from the best and most ancient writers of Greece and Rome, concerning *Linus*, *Orpheus*, and *Musæus*, Vossius, in the true spirit of system, and licentiousness of an etymologist, as well as from an ambition of being thought deeply versed in the Eastern languages, particularly the Phœnician, pretends

(s) *Chronol. of the Greeks*, p. 84.

(t) *Musæum ante omnes*.—*Æn.* lib. vi. ver. 667.

(u) There were two other poets in antiquity of the name of Musæus, of which one was a Theban, the son of Philammon and Thamyra, who, according to Suidas,

flourished before the Trojan war; the other, who was much younger, and an Ephesian, is supposed by many to have been the author of a poem still extant, called *Hero* and *Leander*, whence Ovid enriched his epistle, which bears the same title.

to resolve those names, which have been known and revered by all antiquity, into words signifying *things*, not *persons*: as Linos, *a Song*; Mosa, *art, discipline*; Orpheo, *Science*. But if this fancy were generally practised upon ancient authors, there would be little chance of one among them escaping annihilation (x).

Though *Eumolpus* and *Melampus* are names which frequently occur among those of the first poets and musicians of Greece, it does not appear that they rendered music any particular service; they were both, indeed, priests of Ceres, and both wrote hymns for the use of her worship, which, perhaps, they likewise set to music, and sung themselves, in the celebration of the mysteries; but there are no memorials of their performance upon the instruments then in use, or cultivation of music, apart from its alliance with poetry and religion.

Eumolpus, according to the Oxford marbles, was the son of Musæus, and, at once, priest, poet, and musician, three characters that were constantly united in the same person, during the first ages of the world. He was the publisher of his father's verses, and, like him, having travelled into Egypt for the acquisition of knowledge, he afterwards became so eminent at Athens, as hierophant in the Eleusinian mysteries, that, as Diodorus Siculus informs us, the priests and singers, at Athens, were afterwards called *Eumolpides*, from *Eumolpus*, whom they regarded as the founder of their order.

And we learn from the same writer, that *Melampus* was enumerated among those early civilizers of Greece, who thought it necessary to travel into Egypt to qualify themselves for the

(x) De Art. Poet. Nat. cap. xiii. §. 3. Puto enim, triumviros istos poëseos, Orphæa, Musæum, Linum, non fuisse: sed esse nomina ab antiqua Phœnicum lingua, qua usi Cadmus. et aliquandiu posteri. Sanè λινος carmen, sive canticum, ac precipuè lugubre: ut ex Athenæo, Eustatio, Suida constat. Nomen, ut puto, non quia Linum eo deplorarent,

quod grammaticum est commentum; sed ab Hebræo חֲלִין, helin, murmurare, unde תְּלוּנָה, telounah, querela, murmuratio. Ut Linus nomen poetæ sit lugubria canentis. Musæus absque dubio à Musa, sive Μῦσα, quod à מוֹסָר, Mosar, ars, disciplina. Orpheus itidem à scientia nomen habuerit, a Orfeo.

high employments at which they aspired in their own country. Orpheus proceeded thence a legislator and philosopher; and *Melampus*, who had different views, commenced, at his return, physician and diviner, arts which in Egypt were professed together. Apollodorus says, that he was the first who cured diseases by medicinal potions. Physic had its miraculous powers during the infancy of the art, as well as music; and life and health being esteemed more precious and solid blessings than the transient pleasures of the ear, bore a much higher price: for though bards were often distinguished by royalty, and their talents recompensed by gifts and honours, yet we do not find in ancient records that any one of them ever experienced such munificence as Melampus. It is related by Pausanias, that having cured the daughters of Prætus, king of Argos, of an atrabilious disorder, with hellebore, he was rewarded with one of his royal patients for wife, and a third part of her father's kingdom in dowry.

I now come to the TROJAN WAR, the second important epoch in the Grecian History (y). Antiquity has paid such respect to the personages mentioned in the poems of Homer, as never to have doubted of the real existence of any one of them. The poets and musicians, therefore, who have been celebrated by this great fire of song are ranked among the bards of Greece who flourished about the time of the Trojan War, and of whose works, though nothing entire remains, yet the

(y) In settling the time of this memorable event, though there is a considerable disagreement among the chronologers, yet, by stating the difference, and taking the mean, an idea may be formed of the distance between that period and the Christian æra, when certain chronology begins, and the disputes of historians concerning the dates of great events and transactions upon the globe, are terminated.

Dionysius Hallicarnassensis, book the

first, tells us, from Cato, that Rome was built 432 years after the taking of Troy, and the interval from the building of Rome to the birth of Christ, according to Varro, being 753 years, it places the siege of Troy 1185 before the christian æra, which nearly reconciles the chronology of the Oxford marbles, Archbishop Usher, and Dr. Blair. However, Sir Isaac Newton, who is followed by Dr. Priestley, fixes this period only 904 B. C. and the building of Rome 627.

names, and even fragments of some of them are to be found in several ancient authors posterior to Homer (z.)

Homer was, in general, so accurate with respect to *costume*, that he seldom mentioned persons or things that we may not conclude to have been known during the times of which he writes; and it was Mr. Pope's opinion that his account of people, princes, and countries, was purely historical, founded on the real transactions of those times, and by far the most valuable piece of history and geography left us concerning the state of Greece in that early period. His geographical divisions of that country were thought so exact, that we are told of many controversies concerning the boundaries of Grecian cities, which have been decided upon the authority of his poems.

The works of Homer were the bible of the Greeks: and what classical reader will be so sceptical now as to doubt of what Homer says? Indeed, as the first written memorials of human transactions were in verse, *Poetry* must be *History*, till *Prose* can be found. I shall, therefore, give a short account of each bard that is mentioned in the *Iliad* and *Odyssey*, in order to fill up the interval between the Argonautic expedition, and the regular celebration of the Olympic games. But, previous to this, it may be necessary to take a view of the state of Grecian arts and sciences in general, during this early period, and, afterwards, to consider the use of music in particular, as far as it was connected with *religion, war, poetry, public feasts and banquets, and private life.*

In the *Odyssey*, book the 17th, Homer speaks of arts in such terms of respect and enthusiasm, as could only flow from a mind truly sensible to their charms and utility.

Round the wide world are sought those men divine,
Who public structures raise, or who design;

(z) Dr. Blair places the time when Homer flourished, about 900 B. C. Dr. Priestly 850. The Arundelian marbles 300 after the taking of Troy, and near 1000 B. C. and all agree that he lived above 400 years before Plato and Aristotle.

Those

Those to whose eyes the gods their ways reveal,
 Or bless with salutary arts to heal;
 But chief to poets such respect belongs,
 By rival nations courted for their songs;
 These states invite, and mighty kings admire,
 Wide as the sun displays his vital fire.

“ This is an evidence, says Mr. Pope, of the great honour anciently paid to persons eminent in mechanic arts : the architect and public artisans, *δημιουργοί*, are joined with the prophet, physician, and poet, who were esteemed almost with a religious veneration, and looked upon as public blessings.”

Homer certainly gives us higher ideas of the arts than the progress which the Greeks had made in them at the time of the Trojan war, or even in his own time, will allow, particularly *Painting*. Pope, in speaking of the shield of Achilles, seems to consider it as a complete *idea* of that art, and a sketch for what may be called a *universal picture*; but he is obliged to confess that Homer in this, as in other arts, comprehended whatever was known in his own time, and that it is even highly probable that he extended his ideas yet further, and gave a more enlarged notion of it. For there is scarce a species or branch of this art which is not to be found in the description of this shield (a).

In support of this reasoning, Mr. Pope was obliged to oppose his own opinion to that of all antiquity; forgetting that there was an easier solution of the difficulties which lay in the way of his hypothesis: for as Homer had travelled into Egypt, it may be supposed that he had *there* acquired ideas of the arts in general, far superior to those which his own country furnished; particularly painting, sculpture, and architecture, which we are certain, from what still remains of them in Egypt,

(a) See Pope's Observations on the Shield of Achilles. *Iliad*, B. 18.

were cultivated, and greatly advanced towards perfection, before the time of Homer, or even the Trojan war; and Mr. Pope, on another occasion, allows him to have drawn his knowledge from that source. "Magic, says he, is supposed to have been first practised in Egypt, and to have spread afterwards among the Chaldeans: It is very evident that Homer had been in Egypt, where he might hear an account of the wonders performed by it (b)."

With respect to music, we find it mentioned with a degree of rapture in more than fifty places of the Iliad and Odyssey. However it is in such close union with poetry, that it is difficult to discriminate to which the poet's praises belong. The lyre indeed is constantly in the hands of the bard, but merely as an instrument of accompaniment to the voice. So that I fear, music and the lyre were frequently only vehicles through which Homer celebrated the power of poetical numbers. Singing there is without instruments, but of instrumental music without vocal, there does not appear the least trace in the writings of Homer. Even dancing was accompanied by the voice, according to the following passage:

Then to the *dance* they form the *vocal strain*,
Till Hesperus leads forth the *starry train* (c).

It seems as if nothing would convey to the reader a more just and clear idea of the state of music in the time of the Trojan war, or at least of Homer, than a list of the instruments mentioned in the original; these are the *lyre*, the *flute*, and the *fyrinx* (d). The lyre has been called by translators, lute, harp, cithara, and testudo, just as the convenience of versifi-

(b) Notes to the Odyssey, b. x.

(c) Odyssey, b. xv. See likewise b. iv. v. 25.

(d) Indeed the word *λυρα*, *lyre*, never occurs in the Iliad, Odyssey, or Hymns of

Homer. *φορμιγγίς*, *κιθάρα*, *χέλυσ*, are the Greek names for stringed instruments answering to *lyre*, *harp*, *cithara*, *chelys*, or *testudo*. Aristophanes is the oldest Greek writer in whose works *λυρα* appears.

cation required ; and if these and the lyre were not in ancient times one and the same instrument, they were certainly all of the same kind (*e*).

The flute and syrinx have already been said to be of Egyptian origin, and of great antiquity. These instruments are specified by Homer in a passage where they do not appear in Mr. Pope's version.

Now o'er the fields, dejected, he surveys
From thousand Trojan fires the mounting blaze ;
Hears in the passing wind the *music blow*,
And marks distinct the voices of the foe (*f*).

Under whatever idea or denomination the public worship of the Supreme Being has been established, music appears, at all times and in every place, to have been admitted in the celebration of *Religious Rites and Ceremonies*. That the Greeks, and before them the Egyptians and Hebrews, used music in solemn sacrifices, as well as in festivals of joy, is so certain and well known, that proofs are here unnecessary. A passage has already been cited from the Iliad, on another occasion, page 187, which puts the use of hymns and songs of piety in supplicating Apollo, out of doubt ; and, according to a passage given from Æschylus, by Eustathius, notwithstanding the multiplicity of the Grecian divinities, "*Death* was the only God who could neither be moved by offerings, nor conquered by sacrifices and oblations ; and therefore he was the only one to whom no altar was erected, and *no hymns were sung* (*g*)."

(*e*) Eustathius tells us that the appellation of *λυρα* came from *λυτρα*, a *payment*, or *indemnification*, alluding to its having been given by Mercury to Apollo, to make him amends for the oxen that he had stolen from him. The instrument, long before it received this name, was called *χελυς*, *chelys*, *testudo*. This seems to furnish

a fanciful etymology for the *lute*, which is certainly a much more modern instrument than the harp or lyre.

(*f*) *Αυλων, συρίγγων τεινοπην, ομαδον τ' ανθρωπων. Il. K. 13.*

(*g*) *Μονος διων θανατος η δωρων ερα,
Ουδ' αν τι θυων, εδ' επισπειδων λαβοις,
Ουδ' εστι βωμος, εδε παλαιηζεται.*

With respect to *Military Music*, the trumpet is mentioned by Homer in a simile; yet it is agreed by all the critics that it was unknown to the Greeks during the Trojan war, though it was in common use in the time of the poet. According to Archbishop Potter (*h*), before the invention of trumpets, the first signals of battle in primitive wars were lighted torches; to these succeeded shells of fishes, which were sounded like trumpets. We find, likewise, that heralds performed this office during the siege of Troy. Nestor says to Agamemnon before a battle:

Now bid thy heralds sound the loud alarms,
And call the squadrons sheath'd in brazen arms (*i*).

The vociferous Stentor is celebrated by Homer as the most illustrious Throat-performer, or herald of antiquity:

Stentor the strong, endued with brazen lungs,
Whose throat surpass'd the noise of fifty tongues (*k*).

Mr. Pope observes on this passage, that "there was a necessity for cryers whose voices were stronger than ordinary, in those ancient times, before the use of trumpets was known in their armies. And that they were in esteem afterwards, may be seen from Herodotus, where he takes notice that Darius had in his train an Egyptian, whose voice was louder and stronger than that of any other man of his age."

That *Poetry* was inseparable from *Music* has already been frequently observed; and in the time of Homer as a *poet* was constantly styled a *singer*, so there was no other appellation for a *poem*, but that of *song*. I shall only select one passage here, from among the many that are to be found in the *Iliad* and *Odyssey*, relative to the union of sound and sense. Agamemnon meeting with Achilles in the shades, relates to him how much his fall had been lamented by the Grecians at Troy:

(*h*) *Archæologia Græca*, vol. II. ch. ix.

(*i*) *Il.* book ii.

(*k*) *Ibid.* book v.

Round thee, the Muses, with alternate strain,
In ever consecrating verse complain.
Each warlike Greek the moving music hears,
And iron-hearted heroes melt in tears (l).

Among the numerous *public feasts* and *banquets* described by Homer, there is not one without music and a bard. And, according to the ideas of that poet, the Gods themselves upon such occasions, receive delight from the voice and lyre of Apollo and the Muses.

Thus the blest Gods the genial day prolong;
In feasts ambrosial, and celestial song;
Apollo tun'd the lyre (m), the Muses round
With voice alternate, aid the silver sound (n).

Again, in the last book of the Iliad, Juno, speaking of the wedding of Peleus and Thetis, and exercising her irascible disposition upon almost all the celestial synod, says,

To grace those nuptials, from the blest abode
Yourself were present, where this minstrel God (o),
Well pleas'd to share the feast, amid the choir
Stood proud to hymn, and tune his youthful lyre.

The banquet, on the arrival of Telemachus, at the palace of Menelaus in Sparta, is thus described.

While this gay friendly troop the king furround,
With festival and mirth the roofs resound :
A bard amid the joyous circle sings
High airs, attemper'd to the vocal strings (p).

(l) *Iliad*, book xxiv. ver. 77.

(m) It is worthy of remark, that the instrument assigned by the poet to Apollo is, in the original, invariably called *φούρμις*, which is the appellation given to it by Pindar. This has been supposed to be an Egyptian word, and perhaps was that

by which the Theban harp, or lyre, was called. See p. * 221.

(n) *Iliad*, lib. i.

(o) Apollo. In modern language she would have called him the *fiddling* God.

(p) *Odyssey*, book iv. ver. 21.

To these I shall only add the following comprehensive panegyric of poetry and music, which Homer has put in the mouth of the wise Ulysses.

How sweet the products of a peaceful reign !
 The Heav'n taught poet, and enchanting strain :
 The well fill'd palace, the perpetual feast,
 A land rejoicing, and a people blest.
 How goodly seems it ever to employ
 Man's social days in union and in joy !
 The plenteous board, high heap'd with cates divine,
 And o'er the foaming bowl, the laughing wine (*p*).

It is true, that these verses are addressed to the voluptuous king of an effeminate people ; but Pope has so well defended our author from the attacks of four critics, that I shall give an extract from his note on this passage, as his sentiments correspond exactly with my own feelings.

“ It is not impossible, says he, but there may be some compliance with the nature and manners of the Phæacians, especially because Ulysses is always described as an artful man, not without some mixture of dissimulation : but it is no difficult matter to take the passage literally, and yet give it an irreproachable sense. Ulysses had gone through innumerable calamities ; he had lived to see a great part of Europe and Asia laid desolate by a bloody war ; and after so many troubles, he arrives in a nation that was unacquainted with all the miseries of war, where all the people were happy, and passed their lives in ease and pleasures : this calm life fills him with admiration, and he artfully praises what he found praise-worthy in it ; namely, the entertainments and music, and passes over the gallantries of the people, as Dacier observes, without any mention. Maximus Tyrius fully vindicates Homer. It is my opinion, says that author, that the poet, by representing these

(*p*) *Odyssey*, book ix, ver. 3.

guests

guests in the midst of their entertainments, delighted with the song and music, intended to recommend a more noble pleasure than eating and drinking; such a pleasure as a wise man may imitate, by approving the better part, and rejecting the worse, and chusing to please the ear rather than the belly. *Dissert.* xii. If we understand the passage otherwise, the meaning may be this. I am persuaded, says Ulysses, that the most agreeable end which a king can propose, is to see a whole nation in universal joy. When music and feasting are in every house, when plenty is on every table, and there are wines to entertain every guest: this to me appears a state of the greatest felicity. In this sense Ulysses pays Alcinous a very agreeable compliment; as it is certainly the most glorious aim of a king to make his subjects happy, and diffuse an universal joy through his dominions: he must be a rigid censor indeed, who blames such pleasures as these, which have nothing contrary in them to virtue and strict morality; especially as they here bear a beautiful opposition to all the horrors which Ulysses had seen in the wars of Troy, and shew Phæacia as happy as Troy was miserable. I will only add, that this agrees with the oriental way of speaking; and in the poetical parts of the Scriptures, the voice of melody, feasting and dancing, are used to express the happiness of a nation (q)."

The use of music, *in private life*, occurs so frequently in Homer, that, beautiful as his descriptions of it are, I should fear

(q) During his younger years Mr. Pope chose to pass for a friend and admirer of music. He wrote a charming ode on St. Cecilia, because his model, Dryden, had written one before on the same subject; and he speaks respectfully of music in his notes on Homer, out of regard and veneration for his author, whom he is to defend on all occasions. But nothing is more certain than that Pope was by nature wholly insensible to the charms of music, and took every opportunity of throwing contempt upon those who either cultivated, or listened to it with delight. He

asked his friend Dr. Arbuthnot, whose nerves were more tuneable than his own, whether at lord Burlington's concerts, the rapture which the company express upon hearing the compositions and performance of Handel, did not proceed wholly from affectation? I may therefore apply to Mr. Pope in defence of music, what this admirable writer himself says of de la Motte, when he speaks favourably of Homer: that "no praise can be more glorious than that which comes from the mouth of an enemy." *Iliad*, book ix. note on verse 295.

to

to tire the reader if I gave them all. However, some of them are of too much importance to the subject to be past unnoticed. Among these, for the honour of music, it must be remarked, that he thought it so much an accomplishment for princes, as to make both Achilles and Paris performers on the lyre.

In the solemn embassy sent by Agamemnon to Achilles, during his retirement, after he had quitted the Grecian camp in disgust, it is said by Homer of the delegates, that

Amus'd at ease, the godlike man they found,
Pleas'd with the solemn harp's harmonious sound.
(The well-wrought harp from conquer'd Thebæ came,
Of polish'd silver was its costly frame);
With this he sooths his angry soul, and sings
Th' immortal deeds of heroes and of kings (r).

Paris, when he declined the combat with Menelaus, is upbraided by Hector for his beauty, effeminacy, and fondness for dress, and *for music*.

Thy graceful form instilling soft desire,
Thy curling tresses, and thy silver lyre (s).

“ It is ingeniously remarked by Dacier, says Pope, that Homer, who celebrates the Greeks for their long hair, and Achilles for his skill on the harp, makes Hector in this place object them both to Paris. The Greeks nourished their hair to appear more dreadful to the enemy, and Paris to please the eyes of women. Achilles sung to his harp the acts of heroes,

(r) *Iliad*, book ix.

(s) *Ibid.* book iii. I know not whether it has ever been remarked, that in the original the instrument used by Achilles is called by the same name, *φορμυγξ*, as that which the poet always gives to Apollo; and that with which Hector upbraids Paris, which in the translation is styled the silver lyre, is called *κιθαρα* by Homer. This distinction may perhaps be thought

of small importance, and yet it seems to constitute the same kind of difference between the two instruments, as there was between the two heroes who used them; the *cithara* may in ancient times have been thought inferior to the *phorminx*, as the modern guitar is esteemed at present a trivial and effeminate instrument, when compared with the double harp.

and

and Paris the amours of lovers. The same reason which made Hector here displeased at them, made Alexander afterwards refuse to see this lyre of Paris, when offered to be shewn to him, as Plutarch relates the story in his oration of the fortune of Alexander."

Not only the heroes of Homer are musical, but some of his divinities, particularly Calypso and Circe; both of whom are found singing by Hermes and Ulysses (*t*). And a still further confirmation of the importance of music in the opinion of Homer is, that it has a place in four of the twelve compartments, into which his description of the shield of Achilles has been divided by the critics.

1. A town in peace :

Here sacred pomp, and genial feast delight,
And solemn dance, and hymeneal rite :
Along the street the new made brides are led,
With torches flaming to the nuptial bed ;
The youthful dancers in a circle bound
To the soft flute, and cittern's silver sound (*u*).

2. Shepherds piping on reeds (*x*) :

3. Song and dance accompanied by the lyre, during the time of vintage (*y*).

4. A figur'd dance succeeds : such one was seen

In lofty Gnosus, for the Cretan queen,
Form'd by Dædalean art ; a comely band
Of youths and maidens, bounding hand in hand ;
The maids in soft cymarrs of linen drest ;
The youths all graceful in the glossy vest ;
Of those, the locks with flow'ry wreath enroll'd ;
Of these, the sides adorn'd with swords of gold,
That, glitt'ring gay, from silver belts depend.
Now all at once they rise, now all descend,

(*t*) *Odyf.* book v. and x.

(*u*) *Iliad*, book xviii.

(*x*) *Συγγῆτι.*

(*y*) *Iliad*, book xviii.

With well-taught feet : now shape, in oblique ways,
 Confus'dly regular the moving maze :
 Now forth at once, too swift for fight they spring,
 And undistinguish'd blend the flying ring :
 So whirls a wheel, in giddy circle toft,
 And rapid as it runs, the single spokes are lost.
 The gazing multitudes admire around ;
 Two active tumblers in the centre bound ;
 Now high, now low, their pliant limbs they bend,
 And gen'ral songs the sprightly revel end (z).

Dancing has been at all times, and in all places, so inseparable from music, that, like poetry, the history of the one necessarily involves that of the other. It was this union which tempted me to insert the whole description of a dance from Homer, as it paints in so ample, and animated a manner, the state of dancing in Greece during his time.

Mr. Pope in his notes on this passage, says, that "there were two sorts of dances, the Pyrrhic, and the common dance : Homer has joined both in this description. We see the Pyrrhic, or military, is performed by youths who have swords on, the other by virgins crowned with garlands.

" Here the ancient scholiast says, that whereas before it was the custom for men and women to dance separately, the contrary custom was afterwards brought in by seven youths, and as many virgins, who were saved by Theseus from the labyrinth ; and that this dance was taught them by Dædalus : to which Homer here alludes.

" It is worth observing that the Grecian dance is still performed in this manner in the oriental nations : the youths and maids dance in a ring, beginning slowly ; by degrees the music plays a quicker time, till at last they dance with the utmost swiftness : and towards the conclusion, they sing, as it is said

(z) *Iliad*, book xviii.

here, in a general chorus." In this manner, likewise, the religious dance of the dervises is performed in the Turkish mosques.

I have now to speak of the Bards, or Rhapsodists, whom the writings of Homer have immortalized. Fabricius has given a list of more than seventy poets, who were supposed to have flourished before the time of Homer. Of twenty among these, fragments of their writings are still to be found dispersed through Greek literature; and near thirty of them have been celebrated by antiquity as improvers of the art of music, and of musical instruments. I should here insert the names of all these ante-Homeric musicians, and relate what has been recorded concerning them in ancient authors; but as the plan of my work is limited to two volumes, it would be encroaching on that place which must be reserved for persons and transactions of more modern times, and of greater certitude. Indeed several of them have been mentioned already, and as the rest may force themselves in my way during the course of my narrative, I shall here confine myself to the bards of the Iliad and Odyssey.

Among these, the seer TIRESIAS seems the most ancient, though he is only mentioned in the Odyssey, which relates no events but such as happened to Ulysses after the Trojan war. Music, Poetry, Prophecy, and the Priesthood, seem inseparable employments in high antiquity (*a*). The Egyptians, Hebrews, and early Greeks certainly united them: and, among the last, Orpheus, Musæus, Eumolpus, and Melampus, have been instanced already. Tiresias was the most celebrated prophet in the Grecian annals. Ulysses is ordered by Circe to consult him in the shades.

(*a*) The priests in Roman catholic countries are still obliged by their function to cultivate music as well as theology; and most of the numerous musical treatises that have been printed in Italy, have been composed by churchmen; as those of Franchinus, Pietro Aaron, Zarlino, and Kircher.

tises that have been printed in Italy, have been composed by churchmen; as those of Franchinus, Pietro Aaron, Zarlino, and Kircher.

There seek the Theban bard depriv'd of sight,
Within irradiate with prophetic light (b).

But, besides the honour done to him by Homer, Sophocles makes him act a venerable and capital part in his tragedy of Oedipus. Callimachus ascribes to Minerva the gift of his superior endowments; the pre-eminence of his knowledge is likewise mentioned by Tully in his first book of *Divination* (c). And not only Tiresias is celebrated by Diodorus Siculus (d), but his daughter Daphne, who, like her father, was gifted with a prophetic spirit, and was appointed priestess at Delphos. She wrote many oracles in verse, from whence Homer was reported to have taken several lines, which he interwove in his poems. As she was often seized with a divine fury, she acquired the title of *Sibyl*, which signifies enthusiast. She is the first on whom it was bestowed: in after times this denomination was given to several other females, that were supposed to be inspired, and who uttered and wrote their predictions in verse, which verse being sung, their function may be justly said to unite the priesthood with prophecy, poetry, and music.

THAMYRIS is called by Homer *Κίθαρις*, *one who sings to the cithara*. Plutarch, in his *Dialogue on Music*, tells us, that he was born in Thrace, the country of Orpheus, and had the sweetest and most sonorous voice of any bard of his time. He was the son of Philammon, of whom mention has already been made. Homer in his Catalogue of Ships, where he speaks of the cities under the dominion of Nestor, mentions Dorion as the place where Thamyris contended with the Muses, whom he had the arrogance to challenge to a trial of skill in poetry and music. The conditions and consequences of this contention are fully described by the poet.

(b) *Odyf.* book ii.

(c) Ovid in his *Metamorphoses*, gives a very jocular reason for the blindness and prophetic knowledge of Tiresias, deriving

them from a matrimonial contest between Jupiter and Juno.

(d) *Lib.* iv.

And

And Dorion, fam'd for Thamyris' disgrace,
 Superior once of all the tuneful race,
 Till, vain of mortals empty praise, he strove
 To match the feed of cloud-compelling Jove!
 Too daring bard! whose unsuccessful pride
 Th' immortal Muses in their art defy'd:
 Th' avenging Muses of the light of day
 Depriv'd his eyes, and snatch'd his voice away;
 No more his heav'nly voice was heard to sing,
 His hand no more awak'd the silver string (e).

Homer availed himself of the popular story concerning the blindness of Thamyris, and embellished it by his versification. Probably the whole allegory of this blindness had its rise from his having injured the organ of sight by too intense an application to the study of music and poetry. And it is the opinion of Pausanias, that there was no other difference between his misfortune and that of Homer, than that Thamyris was wholly silenced by it, and Homer, without being discouraged, continued his poetical and musical occupation long after his blindness.

The same writer, however, informs us, that the painter Polygnotus, in his celebrated picture of Ulysses' descent into hell, which was preserved in the temple of Delphos, had represented the wretched Thamyris with his eyes put out, his hair and beard long and dishevelled, and his lyre broken and unstrung, lying at his feet. It is certain too, according to Pausanias, that this bard was not only the subject of painting and poetry, but of sculpture; for he tells us, that among the statues with which mount Helicon was decorated, he saw one of Thamyris, represented blind, and holding a broken lyre in his hand.

According to Diodorus Siculus he learnt music at the school of Linus; and, if we may credit Suidas, he was generally re-

(e) *Iliad*, book ii.

garded as the eighth among the epic poets who preceded Homer.

As to his works, which are wholly lost, antiquity has preserved the names of several. Tzetzes mentions a *cosmogony*, or creation of the world, in 500 verses, and Suidas a *theogony* in 3000; perhaps both these writers speak of one and the same poem. He was said chiefly to have excelled in the composition of hymns; on which account the fanciful philosopher, Plato, compares him with Orpheus; and as he makes the soul of this bard, after death, pass into that of a swan, he fixes the residence of that of Thamyras in a nightingale.

We only know his poem upon the War of the Titans by what Plutarch tells us of it from Heraclides of Pontes. Clemens Alexandrinus attributes to him the invention of the Dorian mode or melody, which, if it could be proved, would be of more importance to the present enquiries than the ascertaining his poetical works. But this mode, it has been suggested already, was so ancient, that it may well be imagined to have been brought out of Egypt by the first invaders of Greece, who settled in that part of it which was called Doria.

In speaking of DEMODOCUS, Homer has taken occasion to exalt the character of poet and bard to the summit of human glory. The hospitable king of the Phæacians in order to entertain Ulysses, says,

Let none to strangers, honours due disclaim;
Be there Demodocus, the bard of fame,
Taught by the Gods to please, when high he sings
The vocal lay responsive to the strings (f).

Mr. Pope observes upon this passage, that Homer shews in how great request music was held in the courts of all the eastern princes: he gives a musician to Ithaca, another to Menelaus at Lacedæmon, and Demodocus to Alcinous.

(f) *Odyssey*, book viii.

The

The herald now arrives, and guides along
 The sacred master of celestial song:
 Dear to the Muse! who gave his days to flow
 With mighty blessings, mix'd with mighty woe:
 With clouds of darkness quench'd his visual ray,
 But gave him skill to raise the lofty lay.
 High on a radiant throne, sublime in state,
 Encircled by high multitudes he sate:
 With silver shone the throne; his lyre well strung
 To rapturous sounds, at hand Pontonous hung.
 Before his seat a polish'd table shines,
 And a full goblet foams with gen'rous wines:
 His food a herald bore (g).

It has been generally thought, says Pope, that Homer represents himself in the person of Demodocus. It is remarkable, at least, that he takes very extraordinary care of his brother poet, and introduces him as a person of great distinction. He calls him in his book, the hero Demodocus: he places him on a throne studded with silver, and gives him an herald for his attendant: nor is he less careful to provide for his entertainment; he has a particular table, and a capacious bowl set before him to drink from, as often as he had a mind, as the original expresses it. Some merry wits have turned the last circumstance into raillery, and insinuate that Homer in this place, as well as in the former, means himself in the person of Demodocus; an intimation that he would not be displeased to meet with the like hospitality.

Then fir'd by all the Muse, aloud he sings
 The mighty deeds of demi-gods and kings—
 Touch'd at the song, Ulysses strait resign'd
 To soft affliction all his manly mind (h).

(g) *Odyssy*, book viii.(h) *Ibid.*

Homer several times in this book ascribes the song of Demodocus to immediate inspiration; and this supernatural assistance reconciles it to human probability, says Pope, and the story becomes credible when it is supposed to be related by a Deity. Aristotle, in his Poetics, commends this conduct as artful and judicious; Alcinous, says he, invites Ulysses to an entertainment, in order to amuse him, where Demodocus sings his actions, at which he cannot refrain from tears, which Alcinous perceives, and this brings about the discovery of Ulysses.

To cite all the praise which Homer in his *Odysssey* has bestowed upon Demodocus, would be to transcribe the whole eighth book. It may be worth observing that he sung and played extempore.

The bard, advancing, meditates the lay (i).

And again:

O more than man! thy soul the Muse inspires,
And Phœbus animates with all his fires:
For who by Phœbus uninform'd, could know
The woe of Greece, and sing so well the woe?
Just to the tale, as present at the fray,
Or taught the labours of the dreadful day:
The song recalls past horrors to my eyes,
And bids proud Ilion from her ashes rise (k).

Here Ulysses himself ascribes the songs of Demodocus to immediate inspiration; and Apollo is made the patron of the poets, Eustathius observes, because he is the God of prophecy. He adds, that Homer in this passage, likewise, represents himself in the person of Demodocus: it is he who wrote the war of Troy with as much faithfulness, as if he had been present at it; it is he who had little or no assistance from former relations of that

(i) *Odysssey*, book viii.

(k) *Ibid.*

story, and consequently receives it from Apollo and the Muses. This is a secret, but artful insinuation, that we are not to look upon the Iliad as all fiction and fable, but in general as a real history, related with as much certainty as if the poet had been present at those memorable actions.

Homer, it is certain, has neglected nothing which can give dignity and importance to this Bard. He never moves without a herald; he has a distinguished place at the king's table; is helped by Ulysses to the first cut; and

For him the goblet flows with wines unmixt.

The following lines are so beautiful and applicable to the present subject, that I cannot help inserting them, though I have already, perhaps, been too profuse of quotations; not with the design of swelling the volume, or from a scarcity of other materials, but because the passages interested me, and inclined me to hope that they would be equally striking to the reader (1).

The Bard a herald guides: the gazing throng
Pay low obeysance as he moves along:
Beneath a sculptur'd arch he sits enthron'd,
The peers encircling form an awful round.
Then from the chine, Ulysses carves with art
Delicious food, an honorary part;
This, let the master of the lyre receive,
A pledge of love! 'tis all a wretch can give.
Lives there a man beneath the spacious skies,
Who sacred honours to the Bard denies?

(1) History can only consist of quotations, when we write of times anterior to our own, or concerning things of which we have not been eye-witnesses. In treating, therefore, every subject which relates to antiquity, it is necessary to give the sentiments of those who have written upon it before, either in support of our own asser-

tions, or to confute those of others. And indeed all that is left for an historian of ancient music, is to collect the scattered fragments, hints, and allusions, relative to it, which occur in old authors; to arrange them in chronological order, and to connect and explain them by reflection and conjecture.

The Muse the Bard inspires, exalts his mind ;
 The Muse indulgent loves th' harmonious kind.

If music be degenerated in these times, the honours conferred upon musicians are likewise diminished ; for though a vocal performer may acquire the *trifling* reward of fifty guineas a song, yet we never hear of one being seated at a king's table, or even that any modern Hero, or General, however inferior in fame and merit to Ulysses, condescends to carve for him.

Indeed Homer, through the whole *Odyssæy*, speaks with the highest respect of the art which he himself loved, and in which he so eminently excelled. Poets, says Eustathius, were ranked in the class of philosophers ; and the ancients made use of them as preceptors in music and morality (*m*).

Demodocus is supposed by the same critic, and by others, to have been the Bard, already mentioned (*n*), with whom Agamemnon left Clytemnestra in charge. He was blind, as well as Tyresias, Thamyris, and Homer. The instrument he played upon is called in the *Odyssæy* *Phorminx*. Plutarch (*o*) says, that he wrote the destruction of Troy in verse, and the nuptials of Vulcan and Venus. And Ulysses is said, by Ptolemy Hephæstion, to have gained the prize at the Tyrrhene games, by singing the verses of Demodocus.

The last Bard of whom I shall give any account, among the musicians that are celebrated by Homer, is PHEMIUS, whom Eustathius calls a philosopher ; a title lavished on the poets and musicians of antiquity. The same scholiast calls him brother of Demodocus, and says that he accompanied Penelope into Ithaca, when she went thither to espouse Ulysses, in the

(*m*) But he tells us likewise, that these *αοιδοι* were said by some writers to have had their names from hence ; *ὡς αἰδοία μὴ ἐχούσης* ; exactly resembling the Italian fingers. " If this be true, says Mr. Pope, it makes a great difference between the ancient and modern poets, and is the only advantage that I know of which we have over them."

This idea sufficiently qualifies a Bard for the office of guardian to the chastity of a frail princess, and puts him upon a footing with the Chamberlains, the *Εὐσεβοι* of ancient Persia, and other eastern countries.

(*n*) See page 108.

(*o*) *De Musica*.

same character of Bard, as that in which his brother attended Clytemnestra. He was the father-in-law of Homer, having married his mother Crytheis, after the illegitimate birth of the great poet. This story is circumstantially related by the author of the Life of Homer, ascribed to Herodotus by Plutarch and others: though unjustly, according to the opinion of Fabricius, and the best modern critics. But Eustathius informs us, that under the name of Phemius, Homer meant to celebrate one of his friends who was so called, and who had been his preceptor; thence, figuratively, styled his father.

What kind of poets Homer saw in his own time, says Mr. Pope (*p*), may be gathered from his description of Demodocus and Phemius, whom he has introduced to celebrate his profession. Homer seems particularly solicitous to preserve the honour of Phemius, by informing us that he was pressed into the service of the suitors of Penelope, for the amusement of whom he was obliged to exercise his talents in the midst of riot and debauchery.

To Phemius was consign'd the chorded lyre,
Whose hand reluctant touch'd the warbling wire:
Phemius, whose voice divine could sweetest sing
High strains responsive to the vocal string (*q*).

From the instructions which Penelope gives to the Bard, we may, however, form some idea of the kind of songs that were usually performed at the banquet of princes.

Phemius! let acts of Gods, and heroes old,
What ancient Bards in hall and bow'r have told,
Attemper'd to the lyre, your voice employ;
Such the pleas'd ear will drink with silent joy (*r*).

That poetry was regarded, during the time of Homer, as immediate inspiration from the Gods, has been already re-

(*p*) *Essay on Homer*, sect. ii.

(*q*) *Odyssey*, book i.

(*r*) *Ibid.*

marked in the preceding article: and it is evident that his bards sung *extempore*, either upon a given subject, or one of their own choice; nor does it ever appear that any of the poets or musicians, mentioned by Homer, sung verses which had been previously written or composed. And yet Homer makes Ulysses himself inform us, that there was no convivial assembly without a Bard:

I see the smokes of sacrifice aspire,
And hear, *what* *graces* every feast, the lyre (s).

And in the twenty-second book of the *Odyfley*,

Pheuius alone the hand of vengeance spar'd,
Pheuius the sweet, the heav'n-instructed Bard.

The speech which he makes to the avenging Ulysses, in order to deprecate his wrath, is so fine an eulogium upon poetry and music in general, that I cannot better close this chapter than by transcribing it entire.

O king! to mercy be thy soul inclin'd,
And spare the Poet's ever gentle kind.
A deed like this thy future fame would wrong,
For dear to Gods and men is sacred song.
Self-taught I sing, by Heav'n, and Heav'n alone.
The genuine seeds of poesy are sown;
And, what the Gods bestow, the lofty lay
To Gods alone, and God-like worth, we pay.
Save then the *Poet*, and thyself reward,
'Tis thine to merit, mine is to record (t).

(s) *Odyf.* book xvii.

(t) It may be of some importance to music to remark here, that Mr. Pope, in his *Life of Homer*, informs us, "The word *poet* does not occur in all the writ-

ings of this author; nor was it known "during his time." We see it however very frequently in the *translation*, where the original only has *αοιδος*, *Bard*, *Minstrel*, *Singer*.

C H A P. IV.

Of the State of Music in Greece, from the Time of Homer, till it was subdued by the Romans, including the Musical Contests at the Public Games.

IT has been imagined, with great appearance of truth, that the occupation of the first *Poets* and *Musicians* of Greece very much resembled that of the *Bards* among the Celts, and Germans, and the *Scalds* in Iceland, and Scandinavia; Chanters, who sung their works in great cities, and in the palaces of princes, where they were treated with much respect, and regarded as inspired persons. Such, at first, were likewise the *Troubadours* of Provence and Languedoc, and the *Minstrels* of other countries, till they became too numerous and licentious to create wonder or esteem. However, it is well known that a great number of historical events are preserved in the writings of these ancient poets; and that the pictures they have left of the times when they flourished, are simple and genuine. If the writings of the ancient *Romancers*, or *Troubadours* of Greece, possessed the same merit, which we have great reason to believe they did, the historians of after-times, who had no other source to draw information from than their songs, did well to avail themselves of such materials.

Unfortunately, for my present enquiries, from the time of Homer till that of Sappho, there is almost a total blank in literature; for though several names of poets and musicians are recorded between those periods, yet, of their works, only a few fragments remain. Nor are any literary productions preserved entire, between the time of Sappho and Anacreon, who flourished at the distance of near a hundred years from each other; and between the poems of Anacreon and Pindar, there is another chasm of near a century. After this, the works
which

which still subsist of the three great tragic poets, Æschylus, Sophocles, and Euripides; and of the historians, Herodotus, Thucydides, and Xenophon; together with those of Plato, Aristotle, Aristoxenus, Euclid, Theocritus, Callimachus, Polybius, and many others, all produced within the space of less than three hundred years; mark this as one of those illustrious and uncommon periods, in which all the powers of human nature and genius seem to have been called forth and exerted, in order to furnish light and instruction to mankind in intermediate ages of darkness, indolence, calamity, and barbarism.

With respect to the arts, we learn from Pausanias, that sculpture was brought to the highest perfection between the fifty-second or fifty-third Olympiad, and the eighty-third; that is, in about a hundred and twenty years, from Dædalus to Phidias, in which state it continued to the time of Alexander the Great, the celebrated epoch of perfection in all the arts and sciences; after which they began to decline (*a*). It was then that Eloquence, Poetry, History, Music, Architecture, Painting, and Sculpture, like flowers of the climate, sprung up, and bloomed at once, seemingly without labour and without attention, till the artists were no more; after which the whole universe agreed in admiring their productions, and deploring their loss.

As poetry and music, in the early ages of those arts, were so much united, that all the lyric, elegiac, and even epic Bards, were necessarily and professedly musicians, I shall give an account of the principal of them, in chronological order. Indeed, the diligence of editors and commentators has made the literary world, in general, so well acquainted with the most interesting circumstances relative to the lives and writings of every poet whose works are preserved, that I shall have little occasion to swell the biographical part of my work with fur-

(*a*) Phidias died 432 years B. C. and Alexander 323. So that the whole period of perfection in the arts was but of 109 years duration.

ther particulars concerning them. But there are other illustrious names upon record, of Bards, who, though dear to their cotemporaries, and long respected by succeeding ages, have survived the ravages of time, only in a few scattered fragments. And as antiquity has preserved several incidents relative to the lives, talents, and productions of these, I shall endeavour to collect them; and from the scanty materials to be gathered in ancient authors, assign to each the inventions and improvements attributed to him, in Poetry and Music, while those two arts continued so inseparable, as to constitute one and the same profession.

The Oxford Marbles (*b*) inform us, that HYAGNIS, a native of Celænæ, the capital of Phrygia, and cotemporary with Erichthonius, who instituted the Panathenæan games at Athens, 1506 B. C. was the inventor of the Flute, and Phrygian mode; as well as of the *Nomes*, or airs, that were sung to the mother of the Gods, to Bacchus, to Pan, and to some other divinities and heroes of that country. Plutarch (*c*) and Nonnus (*d*) both tell us that he was the father of Marsyas; and Athenæus (*e*), from Aristoxenus and Apuleius (*f*), ascribe to him, not only the invention of the *single* flute, but of the double (*g*).

OLYMPUS has been often mentioned, incidentally, in the course of this volume; but it is a name spoken of with such reverence by the greatest writers of Greece, as well as the best judges of music, that it seems to merit more particular notice.

(*b*) *Epoch.* 10. p. 160.

(*c*) *De Musica.*

(*d*) *Dionys.* lib. x.

(*e*) *Lib.* xiv. c. 5. p. 624. *Ed. Lugd.*

(*f*) *Florid.* lib. i. sect. 3.

(*g*) The double flute, however, is more generally given to his son Marsyas. Julius Pollux, *lib.* iv. cap. 10. speaks of two kinds of single flute, the invention of which was attributed to the Libyans: the Oblique Flute, *πλαγιαυλος*, so called, per-

haps, from being blown at the side, like the modern Fife, or German Flute; and a very shrill flute, made of laurel wood, after the pith and bark were removed, that was used in breaking horses, *ιπποφροσος*. The natives of every quarter of the globe seem to have invented their own flutes; and if Hyagnis and his son Marsyas furnished the Asiatics with those instruments, Africa may have had her's from Libya, or its neighbouring country, Egypt.

There

There were two great musicians in antiquity of the name of *Olympus*, and both celebrated performers on the flute. One of them flourished before the Trojan war, and the other was contemporary with Midas, who died 697 years before Christ. The first was a scholar of Marfyas, and a Mysian; the second, according to Suidas, was a Phrygian, and author of several poems, which were by some attributed to the first *Olympus*. But the most important addition which the disciple of Marfyas made to the musical knowledge of his time, was the invention of the *Enharmonic Genus*, as already described in the Dissertation. Plato and Aristotle, as well as Plutarch, celebrate his musical and poetical talents, and tell us that some of his airs were still subsisting in their time. Religion only can give permanence to music. The airs of *Olympus* used in the temple worship during the time of Plutarch, were not more ancient than the *Chants*, or *Canto Fermo*, to some of the hymns of the Romish church: and the melodies now sung to many of the hymns and psalms of the Lutherans and Calvinists, are such as were applied to them at the time of the Reformation.

Plato says the music of *Olympus* was, in a particular manner, adapted to affect and animate the hearers (*h*); Aristotle, that it swelled the soul with enthusiasm (*i*); and Plutarch (*k*), that it surpassed, in simplicity and effect, every other music then known. According to this Biographer, he was author of the Curule song, which caused Alexander to seize his arms, when it was performed to him by Antigenides. To his musical abilities, he joined those of poetry; and, according to Suidas, and Jul. Pollux, he composed Elegies, and other plaintive songs, which were sung to the sound of the flute; and the melodies of these poems were so much celebrated in antiquity for their pathetic and plaintive cast, that Aristophanes, in the beginning of his comedy called the *Knights*, where he in-

roduces

troduces the two generals, Demosthenes, and Nicias, travestied into valets, and complaining of their master, makes them say, "Let us weep and wail like two Flutes, breathing some air of *Olympus*." Plutarch ascribes to him several *Nomes* or *Airs*, that are frequently mentioned by ancient writers: such as the *Minerva*; the *Harmatian*, *Curule*, or Chariot air, just mentioned; and the *Spondean*, or Libation air.

THALETAS of Crete is the next *Poet-musician* upon record, after Hesiod and Homer. This Bard has been confounded by some writers with *Thales*, the celebrated Milesian philosopher; but, according to Plutarch (l), he was cotemporary with Lycurgus, the Spartan legislator, and lived about three hundred years after the Trojan war. Plutarch also informs us, that though *Thaletas* was only styled a lyric poet and musician, he was likewise a great philosopher and politician; in so much that Lycurgus brought him from Crete, when he returned from his travels, to Sparta, in order to have assistance from him, in establishing his new form of government. His Odes, continues Plutarch, were so many exhortations to obedience and concord, which he enforced by the sweetness of his voice and melody. Plato, likewise, describes his captivating manner of singing; and Plutarch, in his Dialogue on Music, ascribes to *Thaletas* many musical compositions and inventions: such as *Pæans*, and *new Measures* in verse, as well as *Rhythms* in music, which he had acquired from the flute-playing of Olympus, whom he at first had imitated. Porphyry, in his Life of Pythagoras, says, that this philosopher used to amuse himself with singing the old *Pæans* of *Thaletas*; and Athenæus likewise tells us (m), that the Spartans long continued to sing his *Airs*; and, according to the Scholiast on Pindar, this poet-musician was the first who composed the *Hyporchemes* for the armed, or military dance (n).

VOL. I.

of poetry composed, not only to be sung to the sound of flutes and citharas, but to be danced, at the same time. The Italian

A a a

term

There was another poet and musician of the name of *Thaletas*, who was likewise a Cretan, that flourished much later than the cotemporary and friend of *Lycurgus*. Sir Isaac Newton has named him among the early victors at the Pythic games, and Dr. Blair places him 673 years B. C. This is the *Thaletas* whom Plutarch makes cotemporary with *Solon*, and of whom it is related, that he delivered the *Lacedæmonians* from the pestilence, by the sweetness of his lyre *.

The name of *EUMELUS* occurs next among the early poets of Greece, though but little is known concerning his talents or productions. He is quoted, indeed, both by *Pausanias* and *Athenæus*; by the former, to shew the great antiquity of musical contests among the *Messenians*, and, by both, as an *Historian*. But if he was author of a history of his own country, *Corinth*, as these writers have said, it must have been composed in Verse, an *historical Ballad*; prose-writing having been unknown in Greece, so early as 744 years B. C. the time when he is said, by *G. Vossius*, to have flourished. Philosophy and history had no other language than poetry, till the time of *Cadmus Milesius*, and *Pherecydes* of *Scyros*, who were cotemporaries, and the first who wrote concerning either history or philosophy, in *Prose*. *Epimenides* of *Crete*, *Abaris* the philosopher, and *Anacharsis* the legislator, both *Scythians*, as well as *Eumelus* of *Corinth*, and innumerable others, are said to have made verse the vehicle of their instructions and records. These all acquired the title of *Sage (o)*, which, originally, was bestowed not only on the wise and learned, who held commerce with the *Muses*, but on all those who had distinguished themselves, by their abilities in any art or science.

term *Ballata*, the French *Ballade*, and the English word *Ballad*, had formerly the same import; implying, severally, a song, the melody of which was to regulate the time of a dance. And the different measures of poetry being called *feet*, both in ancient and modern languages, suggests an

idea that dancing, if not anterior to Poetry and Music, had a very early and intimate connection with them both. The poet *Simonides* defined Poetry an eloquent Dance: and Dancing, a silent Poetry.

(o) Σοφός.

ARCHILOCHUS

ARCHILOCHUS has been already mentioned, (p) as the inventor of *Dramatic Melody*, or the melody used in *declamation*; which, in modern language, might be termed *Recitative to strict measure*, such as the voice-part observes in many modern pieces of accompanied recitative. Herodotus makes him contemporary with Candaules and Gyges, kings of Lydia, who flourished about the fourteenth Olympiad, 724 years B. C. But modern chronology places him much later (q). According to Plutarch, there is no Bard of antiquity, by whom the two arts of Poetry and Music have been so much advanced, as by *Archilochus*. He was born at Paros, one of the Cyclades. His father Telesicles was of so high a rank, that he was chosen by his countrymen to consult the oracle at Delphos, concerning the sending a colony to Thasos: a proof that he was of one of the most distinguished families upon the island. However, he is said to have sullied his birth by an ignoble marriage with a slave called Enipo, of which alliance, our poet-musician was the fruit.

Though *Archilochus* shewed an early genius and attachment to poetry and music, these arts did not prevent his going into the army, like other young men of his birth; but in the first engagement at which he was present, the young poet, like Horace, and like our own Suckling, *lost* his buckler, though he *saved* his life by the help of his heels; neither of which, luckily, had fared so ill in the battle, as that of Achilles at Troy. *It is much easier*, said he, *to get a new buckler, than a new existence*. This pleasantry, however, did not save his reputation; nor could his poetry or prayers prevail upon Lycambes, the father of his mistress, to let him marry his daughter, though she had been long promised to him. After these mortifications, his life seems to have been one continued tissue of disgrace and resentment (r). There is a great resemblance between the inci-

(p) P. 157.

(q) Blair 686; Priestley 660 B. C.

(r) *Archilochum proprio rabies armavit*
Iambo. HOR.The *rage of Archilochus* was proverbial in antiquity; which compared the provoking this satyrist, to the treading upon a serpent. A comparison not very severe, if

dents of his life, and those of the poet Rousseau: both were equally unfortunate in love, friendship, and in death; both were at war with the world, and the world with them; nor was either admired, till he ceased to be feared. A peevish, satirical, and irascible disposition, soured the public, and embittered their own existence. A *general* satirist, like Cocles on the bridge, stands alone, against a whole army of foes.

All the particular circumstances of this Greek satirist, which cannot with propriety have admission here, have been carefully collected in the course of the present century by three able biographers (r). His musical and poetical discoveries are what chiefly concern this History; and among these, Plutarch (t) attributes to him the *Rhythmopœia* of Trimeter Iambics; the sudden transition from one rhythm to another of a different kind (u); and the manner of accompanying those irregular measures upon the lyre; with several other inventions of the same kind, which, to transcribe, would only be giving the reader words without ideas, or ideas which it is not certain the words were intended to convey. Now, as the measure of verse rigorously governed the melody to which it was set and sung, *new Numbers* in poetry, must have generated *new Airs* in music. Heroic poetry, in hexameter verse, seems to have been solely in use among the more ancient poets and musicians; and the transition from one rhythm to another, which lyric poetry required, was unknown to them; so that if Archilochus was the first author of this mixture, he might with propriety be styled the *Inventor of Lyric Poetry*, which, after his time, became a species of versification wholly distinct from heroic (x).

if it be true that Lycambes, and, as some say, his three daughters, were so mortified by his satire, as to be driven to the consolation of a halter.

(r) Bayle, in his Dictionary; the Abbé Sevin; and M. Burette, in *Mem. de Litt. t. x.*

(t) *De Musica.*

(u) That is, of a different *time*; as from Iambic rhythm, or triple time, to Dactylic, or common time.

(x) See Dissert. p. *86, note (m).

To Archilochus is likewise ascribed the invention of *Epodes*: the word, in its most common acceptation, implies a number of lyric verses of different construction, comprised in a single stanza, which, in odes, were sung immediately after the two other stanzas, called *Strophe* and *Antistrophe* (y). But the name of *Epode* was likewise given to a small lyric poem, composed of *Trimeter-Iambics*, of six feet, and *Dimeters* of four feet, alternately. Of this last kind were the *Epodes* of *Archilochus*, mentioned by Plutarch; and those of the fifth book of the Odes of Horace. And, in after-times, the signification of the word *Epode* was extended to every poem which had a short verse, placed at the end of several longer verses (z).

Our poet-musician is generally ranked among the first victors of the Pythic games; and we learn from Pindar (a), that his Muse was not always a *Termagant*: for though no mortal escaped her rage, yet she was, at times, sufficiently tranquil and pious to dictate hymns in praise of the *Gods*, and *Heroes*. One, in particular, written in honour of Hercules, acquired him the acclamations of all Greece; for he sung it in full assembly at the Olympic games, and had the satisfaction of receiving from the judges, the crown of victory, consecrated to real merit. This hymn, or ode, was afterwards sung in honour of every victor at Olympia, who had no poet to celebrate his particular exploits.

The names of Homer and *Archilochus* were equally revered and celebrated in Greece, as the two most excellent poets which the nation had ever produced. This appears from an epigram in the *Anthologia*, and from Cicero, who ranks him with the poets of the first class, and in his Epistles tells us, that the grammarian Aristophanes, the most rigid and scrupulous critic of his time, used to say, that the longest poem of *Archilochus* always appeared, to him, the most excellent.

(y) *Idem, ibidem*, p. 166.

(z) *Recherches sur la Vie et sur les Ouv-*

rages D'Archiloque. Par l'Abbe Sevin.

(a) *Olimp. 9.*

The Lacedæmonians, though a military people, of austere manners, appear at all times to have invited eminent musicians into their country, and to have encouraged music; not only in order to regulate the steps, and animate the courage of their troops, but to grace their festivals, and fill their hours of leisure in private life *. TYRTÆUS, an Athenian General, and Musician, is celebrated by all antiquity for the composition of military songs and airs, as well as the performance of them. He was called to the assistance of the Lacedæmonians, in the second war with the Messenians, about 685 B. C. and a memorable victory which they obtained over that people, is attributed by the ancient scholiasts upon Horace, to the animating sound of a new military Flute, or Clarion, invented and played upon by *Tyrtæus*. Plutarch tells us that they gave him the freedom of their city; and that his military airs were constantly sung and played in the Spartan army, to the last hour of the republic. And Lycurgus, the orator, in his oration against Leocrates, says, "The Spartans made a law, that whenever they were in arms, and going out upon any military expedition, they should all be first summoned to the king's tent, to hear the songs of Tyrtæus;" thinking it the best means of sending them forth in a disposition to die with pleasure, for their country (b). He was likewise the author of a celebrated song and dance performed at festivals by *three choirs*; the first of which was composed of *old men*, the second of such as were arrived at *maturity*, and the third of *boys*. The first chorus began by this verse: In youth our souls with martial ardor glow'd.
 The 2d. We present glory seek—point out the road.
 The 3d. Though now with children we can only class,
 We hope our future deeds will your's surpass (c).

* Athenæus, *lib. xiv.* tells us, that they had a Flute upon their Ensigns and Standards.

(b) Fragments of this poetry, in elegiac verse, are preserved in *Stobæus*, *Lycurgus Orat.* In *Fulvius Ursinus*, at the end

of *Poems by illustrious Women*; and in the Oxford Edition of *Eleg. & Lyric. Frag. & Scolia*, printed 1759. Τα Σωζόμενα, &c.

(c) The abbé Sevin has likewise collected all the most interesting particulars to be found

All ancient writers who mention the progressive state of music in Greece, are unanimous in celebrating the talents of TERPANDER; but though there is such an entire agreement among them concerning the obligations which the art was under to this musician in its infant state, yet it is difficult to find any two accounts of him, which accord in adjusting the time and place of his birth. It does not, however, seem necessary to lead the reader over hedge and ditch with chronologers, after a truth, of which the scent has so long been lost. The Oxford Marbles, which appear to me the best authority to follow, tell us, in express terms, that he was the son of Derdeneus of Lesbos, and that he flourished in the 381st year of these records (*d*); which nearly answers to the twenty-seventh Olympiad, and 671st year B. C. The Marbles inform us likewise, that *he taught the Nomes, or Airs, of the Lyre and Flute, which he performed himself upon this last instrument, in concert with other players on the Flute* (*e*). Several writers tell us that he added three strings to the lyre, which before his time had but four; and in confirmation of this, Euclid (*f*) and Strabo (*g*) quote two verses, which they attribute to *Terpander* himself (*h*).

The *Tetrachord's* restraint we now despise,

The *seven-string'd lyre* a nobler strain supplies.

If the hymn to Mercury, which is ascribed to Homer, and in which the *seven-stringed lyre* is mentioned, be genuine, it robs *Terpander* of this glory. The learned, however, have great doubts concerning its authenticity (*i*). But if the lyre

found in ancient authors, relative to the life and writings of *Tyrtaeus*. See *Mem. de Litt. tom. viii.*

(*d*) *Marm. Oxon. Epoch. 35. p. 166.*

(*e*) ΤΟΥΣ ΝΟΜΟΥΣ ΤΟΥΣ ΛΥΡΑΣ ΚΑΙ ΑΥΛΩΝ ΕΔΙΔΑΞΕΝ, ΟΥΣ ΚΑΙ ΑΥΑΗΤΑΙΣ ΣΥΝΗΤΑΞΕ.

(*f*) *Introd. Harm. p. 19. Edit. Meibom.*

(*g*) *Lib. xiii.*

(*h*) Ἡμεῖς τοὶ τετραγχοῦν ἀποσπράξαντες αἰοῖδον, ἑπτάτοιον φορμυγῇ νέης κελαιόσομεν ὕμνος.

(*i*) See Clarke's Notes on Homer. The Hymn to Apollo has indeed better authority; for it is quoted by Thucydides, whose testimony is of great weight; but as neither the word *χελος*, nor *λυρα*, are to be found in the *Iliad*, *Odyssey*, or in this Hymn, and as both occur in that to Mercury, it seems to furnish a proof of its being spurious, which has hitherto escaped the commentators. The mention of *seven concordant strings*—ἑπτά δὲ συμφωνῆς οἶον ἱταυσσακο.

had been before his time furnished with seven strings, in other parts of Greece, it seems as if Terpander was the first who played upon them at Lacedæmon. The Marbles tell us that the people were offended by his innovations. The Spartan discipline had deprived them of all their natural feelings; they were rendered machines, and whether Terpander disturbed the springs by which they used to be governed, or tried to work upon them by new ones, there was an equal chance of giving offence. The *new strings*, or *new melodies*, and *new rhythms*, upon the old strings, must have been as intolerable to a Lacedæmonian audience, at first hearing, as an Organ, and cheerful music would have been, to a Scots congregation some years ago, or would be to a Quaker's meeting now. "It is not at all surprising, says Alcibiades, that the Lacedæmonians seem fearless of death in the day of battle; since death would free them from those laws which make them so wretched (*k*)."

Plutarch, in his Laconic Institutions, informs us, that Terpander was fined by the Ephori for his innovations. However, in his Dialogue on Music, he likewise tells us, that the same mu-

ἱτανυσσάτω χορδας. v. 51. in this last Hymn, is a curious circumstance; but unless the time when it was written could be ascertained, no conclusions can be drawn from it. It may be worth observing, however, that the words αἰών χορδας in this verse, tell us, that the strings of the Mercurian lyre were *sheep-strings*, that is, made of *sheep's bowels*, as violin strings are at present, and not of *cat-gut*, as is generally imagined.

(*k*) Ælian. lib. xiii. c. 38. These people seem to have made life one continued penance, from the beginning to the end of it, by constantly counteracting nature in all her operations. They were inveterate Fanatics, equally enemies to comfort and elegance in their way of living, with the most gloomy Methodists of modern times. It is given by Plutarch, as a *bon mot* of one of their kings, that when a musician was highly extolled for his skill, he

said, "how much you must admire a *brave man*, who can bestow such praise upon a *barber*?" And when a musician was recommended to the same prince, as a man who composed excellent music, he said, turning to his cook, "and this man can make good *broth*." The particular kind of merit in which persons of narrow minds excel, is, with them, the first of all qualifications. The Spartans had brought the art of killing their neighbours, and of defending themselves, to great perfection, and they were unwilling to allow that any other accomplishment was necessary. Plutarch, in his Life of Lyncurgus, tells us, however, that they would not suffer their slaves to sing either the songs of Terpander or Alcman. And that some of the Helots, or slaves, being taken prisoners by the Thebans, and asked to sing them, said, *they are the songs of our masters, we dare not sing them.*

fician

fician appeased a sedition at Sparta, among the same people, by the persuasive strains which he sung and played to them upon that occasion. There seems no other way of reconciling these two accounts, than by supposing that he had, by degrees, refined the public taste, or depraved his own to the level of his hearers.

Among the many signal services which *Terpander* is said to have done to music, none was of more importance than the *Notation* that is ascribed to him for ascertaining and preserving melody, which before was traditional, and wholly dependent on memory (*n*). The invention, however, of *Musical Characters* has been attributed by *Alypius* and *Gaudentius*, two Greek writers on music, and, upon their authority, by *Boethius*, to *Pythagoras*, who flourished full two centuries after *Terpander*. It will be necessary therefore to tell the reader upon what grounds this useful discovery has been bestowed upon him.

Plutarch (*o*), from *Heraclides of Pontus* (*p*), assures us that *Terpander*, the inventor of *Nomes* for the *Cithara*, in *Hexameter* verse, *set them to music* (*q*), as well as the verses of *Homer*, in order to sing them at the public Games. And *Clemens Alexandrinus* (*r*), in telling us that this musician wrote the laws of *Lycurgus* in verse, and *set them to music*, makes use of the same expression as *Plutarch*, which seems clearly to imply a *written melody* (*s*).

After enumerating the *Airs* which *Terpander* had composed, and to which he had given names, *Plutarch* (*t*) continues to speak of his other Compositions, among which, he describes the *Proems* (*u*), or Hymns for the *Cithara*, in *heroic verse*. These

(*n*) What this *Notation* was, has been already explained in the *Dissertation*, *sect. I.*

(*o*) *De Musica.*

(*p*) A voluminous writer upon Music, as well as upon many other subjects; he was cotemporary with *Plato*, and his disciple. The works of *Heraclides of Pontus* are frequently cited by *Plutarch*, and, with the *Records at Sicyon*, and *Registers of the Victors at the sacred Games*, seem to

have been the chief sources from which he drew the historical part of his *Dialogue on Music*.

(*q*) *Μελη περιτιθεντα*, literally, *cloathed them in melody*.

(*r*) *Strom. lib. i.*

(*s*) *Μελος τε αυ πρωτῃ περιεθηκε τῃ ποιημασι :* *first set melody to poems.*

(*t*) *Ubi supra.*

(*u*) *Προίμια κιθαρωδικα.*

were used in after-times, by the Rhapsodists, as prologues or, introductions, to the poems of Homer, and other ancient writers. But *Terpander* rendered his name illustrious, no less by his *Performance*, both upon the Flute, and Cithara, than by his Compositions. This appears by the Marbles, already mentioned; by a passage in Athenæus, from the historian Hellanicus, which informs us that he obtained the first prize in the Musical Contests at the *Carnean Games* (x); and by the testimony of Plutarch, who says, that “no other proof need be urged of the excellence of *Terpander*, in the art of playing upon the Cithara, than what is given by the Register of the Pythic Games, from which it appears, that he gained four prizes, successively, at those solemnities (y).”

After speaking of the victories obtained by this venerable Bard, at the *Public Games*, it seems necessary to be somewhat minute in describing these memorable institutions, as far as they concern Music. And, in order to convey to the reader as clear an idea as I am able, of the rank which Music and Musicians held at these assemblies, I shall give some account of each of the four principal, or *Sacred Games*, separately: and first,

Of the Olympic Games.

Though it is not my design to insert all the irreconcilable accounts of ancient authors, concerning the origin of these institutions, yet I shall be the more parti-

(x) These were instituted at Sparta, about the 26th Olympiad, 676 B. C. in order to avert the anger of Apollo for the death of *Carnus*, one of his priests, murdered by the Dorians. Athenæus, *lib. xiv.* tells us, that Hellanicus, in his *Treatise upon Versification*, had inserted an exact list of the several victors at the *Carnia*, from the first celebration of those festivals, to his own time; and that *Terpander* was at the

head of them. Hellanicus died 411 B. C. He was a Lesbian, and the first Historian who computed time according to the *years of the priestesses of Argos*; as Timæus was the first who reckoned by *Olympiads*.

(y) *Ibid.* These must have been obtained at the *casual* celebration of the Pythic games, long before their regular establishment.

cular in tracing them, not only as many Poets and Musicians displayed their skill and abilities at them, but as they constitute the most memorable *Æra* of pagan antiquity, upon which all Chronology and History depend. Historians have, indeed, the greatest obligations to these Epochs, which have thrown a light upon the chaos of remote events, and enabled them to distinguish and ascertain them.

All the Grecian Games seem to have originated from the honours paid to deceased heroes, by their surviving friends at their Obsequies. Homer, who mentions not the *Olympics*, is very minute in describing the Funeral Games, celebrated in honour of Patroclus and Achilles (*a*). They are likewise to be found in the *Argonautics*, attributed to Orpheus; and in Apollonius Rhodius. Games of a different kind are, however, described by Homer, not only such as were exhibited for the amusement of Ulysses at the court of Alcinous (*b*), but others at Delos, that were connected with religion, in which it seems as if Homer himself had performed. Thucydides (*c*) tells us, that in very remote antiquity, there were "Games of bodily exercise, and of *Music*, in which cities exhibited their respective *Chorusses*;" and, in testimony of this, he quotes the following verses from Homer's Hymn to Apollo:

"To thee, O Phœbus, most the Delian isle
Gives cordial joy, excites the pleasing smile;
When gay Ionians flock around thy fane;
Men, women, children, a resplendent train,
Whose flowing garments sweep the sacred pile,
Whose grateful concourse gladdens all the isle,
Where champions fight, where dancers beat the ground,
Where *cheerful Music* echoes all around,
Thy feast to honour and thy praise to sound."

(*a*) *Il.* book xxiii. and *Odyss.* book
xxiv.

(*b*) *Odyss.* book viii.

(*c*) *Lib.* iii. *cap.* 104.

“ That there was also, continues Thucydides, a *Musical Game*, to which artists resorted to make *Trials of skill*, Homer fully shows in other verses to be found in the same Hymn : for having sung the Delian chorus of females, he closes their praise with these lines, in which he makes some mention of himself ;

“ Hail ! great Apollo, radiant God of day !
Hail Cynthia, goddess of the lunar sway !
Henceforth on me propitious smile ! and you,
Ye blooming beauties of the isle, adieu !
When future guests shall reach your happy shore,
And refug'd here from toils, lament no more ;
When social talk the mind unbending cheers,
And this demand shall greet your friendly ears—
*Who was the Bard, e'er landed on your coast,
That sung the sweetest, and that pleased you most ?—*
With voice united, all ye blooming fair,
Join in your answer, and for me declare ;
Say—*The blind Bard the sweetest notes may boast,
He lives at Chios, and he pleas'd us most.*”

SMITH's Thucydides.

I cannot help pointing out another circumstance in this Hymn, which is really curious, as it implies the cultivation of a talent for *imitation*, at a time when simplicity and original genius seem most likely to have subsisted, pure and untainted, by ludicrous similitudes.

Homer, in 162d verse, describing the employment of the Delian priestesses, or *Nuns* of the order of *Saint Apollo* of Delos, tells us, that they were great adepts in the art of *Mimickry*, and that part of the entertainment which they afforded to the numerous people of different nations, who formed their congregation, was, as the poet expresses it, from their *being skilled*

to

to imitate the voices and the pulsation (d), or measure, of all nations: and so exactly was their song adapted, that every man would think he himself was singing (e).

Homer seems to sketch out the order of the performance in these old pagan *Conservatorios*; v. 158. first they sung a hymn in praise of Apollo: then another in praise of Latona and Diana: then they descended to the celebration of *human* Heroes and Heroines of ancient times; and it seems to have been in this part of their performance, that they exerted their mimetic powers, and *charmed the nations* (f).

It appears, even from the discordant accounts of chronologers, that the *Olympic Games* had at first been only celebrated occasionally, at very distant and irregular periods, in order to solemnize some great events; but as no two writers are agreed concerning either the times or occasions of these early exhibitions, I shall enter upon no discussion concerning them, anterior to the year 776, before Christ, at which time they first began to be *regularly* celebrated once in fifty months, or the second month after the expiration of four years, and to serve as epochs to all Greece. Coræbus, the Elean, was the victor in this Olympiad, which chronologers have unanimously agreed to call the *first*. These Games were particularly dedicated to *Olympian Jupiter*, and had their name either from that circumstance, or from the city *Olympia*, near which they were celebrated.

With whatever design they were at first instituted, whether for religious or civil purposes, in process of time they became of such general importance to all the states and cities of Greece, that there was no one of them which did not think itself deep-

(d) Κρημαλισμός, *Strepitum*.

(e) By the expression πάντων ἀνθρώπων φωνάς, literally, *the voices of all men*, is hardly meant that these ladies were in possession of Mr. Foote's talent, and *took off* individuals. Φωνάς seems only to imply

national melody, or, at most, *national dialects*, and inflexions of speech; and κρημαλισμός, *National Rhythm*, which, in all probability, was the most striking characteristic in those early ages of music.

(f) Θέλγουσι δὲ φῶλ' ἀνθρώπων.

ly interested in their celebration; and which, as each of them furnished combatants of one kind or other, did not eventually participate of the honour they acquired, when victorious, or the disgrace, when vanquished.

Mr. West, in his *Dissertation on the Olympic Games*, published with his translation of some of the Odes of Pindar, has described most of the gymnastic exercises there, and clearly demonstrated that these institutions were at once religious and political, in both which senses they were productive of much public benefit. Respect and veneration for the Gods, but particularly for Jupiter, he observes, were impressed by the noble and magnificent temple and statutes erected to him at Olympia, as well as by religious rites and ceremonies. By the *horse-race*, the breed and management of that useful animal was promoted; in the *foot-race*, manly speed and activity. In other athletic and gymnastic exercises, a noble ambition of excelling in feats of manhood and dexterity, before all the princes and people of Greece, was stimulated by every incitement that was likely to operate upon the passions of men. But though Mr. West tells us that "these assemblies were frequented by persons of the greatest eminence in all the arts of peace, such as Historians, Orators, Philosophers, Poets, and Painters; who perceiving that the most compendious way to fame lay through Olympia, were there induced to exhibit their best performances, at the time of the celebration of the Olympic games;" yet, he has wholly omitted to mention *Poetical* and *Musical Contests*, though both can be proved to have had frequent admission there. Indeed these were not the principal contentions at Olympia, as they were at Delphos, and in some other public Games; being subordinate to the athletic and gymnastic exercises, and no part of the *Pentathlon*, or five bodily exercises, of leaping, running, throwing the quoit or dart, boxing, and wrestling; though even these were accompanied by the Flute; for Pausanias (g) says, that Pythocritus of Sicyon

(g) *Lib. vi.*

played

played six times upon the Flute during the exercise of the *Pentathlon*, at Olympia; and in testimony of the skill and abilities which he manifested in his art, a pillar and statue were erected to him with this inscription :

ΠΥΘΟΚΡΙΤΟΥ
ΚΑΛΛΙΝΙΚΟΥ
ΜΝΑΜΑΤΑ
ΑΥΛΗΤΑ.

To the Memory of Pythocritus, surnamed Callinicus, the Player on the Flute. We have the same authority for the horse-race being accompanied by the Trumpet (*h*); and many ancient writers tell us that the chariot-race was likewise accompanied by the Flute.

Pausanias also remarks, that there was a *Gymnasium* near Olympia, called *Lolichmium*, which was open at all times to those who were desirous of trying their powers in literary combats of every kind, where Music, as the constant companion of Poetry, could not have been excluded.

Ælian (*i*) tells us likewise, that in the 91st Olympiad (*k*), Xenocles and Euripides disputed the prize of Dramatic Poetry at the Olympic games. Now Dramatic Poetry was at this time always set to music, sung, and accompanied by instruments, when performed on the stage; it is probable, therefore, that the case was the same at a public recital; at least with respect to the *lyric* part of the Drama.

In the 96th Olympiad, 396 B. C. a prize was instituted at the Olympic games for the best performer on the Trumpet. It has been already observed (*l*), that the Trumpet was not in use among the Greeks at the time of the Trojan war; and when it became common, it may well be imagined to have served at first only as a rough and noisy signal of battle, like that at present in Abyssinia, and New Zealand, and, perhaps,

(*h*) *Ibid.*

(*i*) *Lib. ii. cap. 8.*

(*k*) 416 B. C.

(*l*) P. 340.

with

with only *one sound*. But when even more notes were produced from it, so noisy an instrument must have been an unfit accompaniment for the voice and for poetry : so that it is probable the Trumpet was the first *solo* instrument in use among the ancients.

The first performer upon this instrument, who gained the prize at the Olympic games, was Timæus of Elis (*m*). His countryman, Crates, obtained one there the same year, on the Cornet, or Horn (*n*). Archias of Hybla, in Sicily, was victor on the Trumpet at three several Olympiads, after this period (*o*). These premiums seem not to have been temporary, but to have been continued long after their first establishment ; for Athenæus informs us, that the famous Trumpeter, Herodorus of Megara, already mentioned in this work (*p*), was victor at the Olympic games ten several times. Jul. Pollux says fifteen. These writers must mean that he obtained so many prizes at the *different* games of Greece ; as Athenæus informs us, that he was victor in *the whole circle of sacred games*, having been crowned at the Olympic, Pythic, Nemean, and Isthmian, by turns (*q*).

These performers on the Trumpet appear to have been Heralds and public cryers ; who, not only gave the signals at the games for the combatants to engage, and announced their success, but proclaimed peace and war, and sounded signals of sacrifice and silence, at religious ceremonies (*r*).

As Herodorus is allowed to have been cotemporary with Demetrius Poliorcetes, he may be placed about the 120 Olymp. 300 B. C. According to the authors already cited, he was as remarkable for his gigantic figure and enormous appetite, as for the strength of his lungs, which were so powerful in blowing

the trumpet, that he could not be heard with safety, unless at a great distance. But, upon these occasions, the danger was not always confined to the *Hearers*; the Performers themselves, sometimes, seem to have exulted, and to have been very thankful that they found themselves alive and well, when their *Solos* were ended. An epigram of Archias, the Hyblæan trumpeter, mentioned above, is preserved in Jul. Pollux, in which he dedicates a statue to Apollo, in gratitude for his having been enabled to proclaim the Olympic games with his trumpet, *three times*, without bursting his cheeks, or a blood-vessel, though he founded with all his force, and without a *Capistrum*, or *Muzzle* (s).

Even the Flute had its dangers, if Lucian may be credited, who relates, with the appearance of great gravity, that Harmonides, a young Flute-player, and scholar of Timotheus, at his first public performance, in order to *elevate* and *surprise*, began his solo with so violent a blast, that *he breathed his last breath into his flute*, and died upon the spot.

Plutarch, and several ancient writers, speak of a kind of *Pasticcio* performance at the public games, among the *Rhapsodists*, who used to collect together favourite passages of poetry and music of different Styles and Masters, and sing them to the Cithara. Cleomenes the *Rhapsodist*, however, according to Athenæus (t), sung, by memory, at the Olympic Games, an *entire* poem, called *the Expiations*, composed by Empedocles (u).

As a further proof of musical contests forming a part of the exhibitions at the *Olympic Games*, I shall only observe that the

(s) See p. 278.

(t) *Lib.* xiv. p. 620.

(u) The import of the word *Rhapsodist* underwent several changes in antiquity: it was first appropriated to *Bards*, who sung their own verses from town to town, or at the tables of the great; in this sense Homer was called a *Rhapsodist*. It was next bestowed on those who sung the *verses of Homer* on the stage, usually for a prize, allotted to the best performer of them; and, lastly, to such singers of *Centos*, as have

been just described. A *Rhapsody*, in modern language, conveys no other meaning than that of an incoherent jumble of ideas. This sense of the word, undoubtedly, took its rise from the notorious folly and absurdity of the *Rhapsodists*, in their rapturous comments upon their favourite poets; for they undertook to *explain*, as well as *recite*. Hence it is that in Suidas, the word *ῥαψῳδία*, is defined by *ῥαψῳδαία*, *nonsense*.

emperor Nero, who regarded every great musician as his rival, disputed the prize in music there, in all its forms (α): first, entering his name with the common candidates, and submitting to all the usual preparatory discipline, as well as to the rigour of the theatrical laws, during performance; and, afterwards, supplicating the favour of the *Nomodictai* (γ), or umpires, by all the seeming submission and anxiety of a professed musician; as if an emperor, and *such* an emperor, had any thing to fear from the severity of his judges!

But, besides the contests, in which Poetry and Music were the *principal* objects of attention, at these numerous and splendid assemblies, those arts must have been cultivated and practised there, with equal zeal and success, in the *secondary* employment, of celebrating the achievements of others. Honour was the chief incitement to the candidates in all the Sacred Games. Indeed, though the victors in the Pentathlon were entitled to a reward of about 500 *Drachmæ*, 16*l.* 2*s.* 11*d.* yet it does not appear, that in the horse, or chariot-race, any other prize was bestowed on the conqueror than an *olive-crown*; for as kings and princes were frequently the combatants, what lucre, but that of glory, could tempt them to enter the lists?

The *victors*, in every species of combat, were, however, distinguished upon all occasions, and had every where the most honourable reception; Poets and Musicians of the greatest eminence, were ambitious of celebrating their praise; and it is to their triumphs that we owe the Odes of Pindar. Other panegyrics of this kind have not come down to us, though every successful hero had a bard to record his victory, and to chant his virtues. Both Simonides and Bacchylides composed Hymns in honour of king Hiero, as well as Pindar; but I shall give sufficient testimony hereafter, of innumerable compositions, of

(α) Suet. in *Nerone*, cap. xxi. and Dio Cassius, tell us, that this prince wore the *Olympic Crown*, after his return into Italy; and entered every great city in his way home,

by a breach in the walls, according to the ancient custom of a conqueror at Olympia.

(γ) *Nomodictai*.

the like species, having been produced, and sung upon similar occasions, by the greatest Poets and Musicians of antiquity.

Mr. West, in his Dissertation, has enumerated, among the honours conferred on Olympic victors, the Odes that were composed for them, and performed in processions and temples, with a religious zeal and solemnity. Indeed, these happy mortals were exalted above humanity; they had nothing to fear from the humiliating vicissitudes of fortune; the public provided for their subsistence, and immortalized their fame, by monuments which seemed to brave the injuries of time. The most celebrated statuaries were ambitious of representing their figures in brass and marble, and binding their brows with the emblems of victory, in the sacred Grove of Olympia: a place which alone, in the time of Pausanias, contained more than five hundred statues of Gods and Heroes of the first class, without including those that had been placed there in honour of less important personages. How rapid must have been the progress of statuary, in consequence of emulation, and the public judgment, rendered fastidious by the variety of comparison! And what an admirable school must these exquisite works have been, both for the history and practice of that art!

The *Olympic Games*, according to St. Chrysostom, continued to be celebrated with splendor till the end of the fourth century; and it may be said, that though the chief attention and honours in these assemblies were bestowed on feats of activity and bodily exercises; yet literature, and the fine arts, were virtually encouraged, cultivated, and refined, in consequence of the victories obtained in the *Stadium* by mere athletics, who, themselves, must frequently be supposed to have had neither skill nor taste, in works of fancy and imitation, or in any thing that depended on the operations of the mind (z).

(z) Hiero of Syracuse, whose achievements Pindar has so much extolled, was in his youth, according to Ælian, *lib. iv. cap. 15.* the most ignorant of mankind, his brother Gelo excepted. But want of

health obliging him to remain inactive, he began to think, and to acquire information from the learned. As for his brother, he remained in ignorance to the end of his life. Of this prince, Plutarch tells us, in his

Of the Pythic Games.

The event upon which these Games, the *second* in rank, among the four called *Sacred*, were founded, has been already related in the History of Apollo (a); and I find no account of their progress in remote antiquity, previous to their regular establishment at stated intervals, more full and satisfactory than that given by Pausanias (b). “The *Pythic Games*, says this writer, consisted, in ancient times, of only Poetical and Musical Contests; and the prize was given to him who had written and sung the best hymn in honour of Apollo. At their first celebration, Chrysothemis of Crete, the son of Carmanor, who purified Apollo, after he had killed the Python, was victor. After him Philammon, the son of Chrysothemis, won the prize; and the next who was crowned, was Thamyris, the son of Philammon. Eleutherus is recorded to have gained the prize there, by the power and sweetness of his voice; though the hymn which he sung was the composition of another. It is said, likewise, that Hesiod was refused admission among the candidates, on account of his not having been able to accompany himself upon the lyre; and that Homer, though he went to Delphos to consult the Oracle, yet, on account of his blindness and infirmities, he made but little use of his talent of singing and playing upon the lyre at the same time.”

Hence it appears, that though Musical Contests were, perhaps, not ranked among the regular and established exercises of the Olympic Games, yet all antiquity agrees, that no

his *Apophthegms*, that he devoted his whole time to athletic exercises. One day, at a festival, in which all the guests sung and accompanied themselves on the lyre, Gelo, to display likewise his talents, called for a horse, in order to shew with what address he could vault upon his back. An English athletic, some years ago, upon

hearing the late Mr. Miller much applauded at Vaux-Hall, for his performance on the Bassoon, cried out, “What signifies his d—’d Bassoon? Why I could break it with my oaken stick.”

(a) P. 280.

(b) *Lib. x. cap. 7.*

others.

others were admitted in the *Pythic*, during the first ages of their celebration.

The Temple of Apollo, at Delphos, a city placed at the foot of mount Parnassus, in Phocis, where the famous oracle was founded, and where these games were celebrated, had, on account of the great treasures it contained, been long the object of desire, to ambition and rapacity; and had frequently been attempted with success. However, the most remarkable sacrilege upon record, was committed by the inhabitants of Crissa, or Cirrha, a small republic in the neighbourhood, who, grown already rich, insolent, and licentious, by a prosperous commerce, seized upon the Temple of Apollo, and not only stripped it of all its treasures, but robbed and plundered all those who were occupied in the service of religion, in the Sacred Grove; pilgrims from all parts of Greece, priests, priestesses, and virgins, committing every kind of outrage, both upon their property and persons. Such crimes as these could not long remain unnoticed, or unpunished; and the Amphictyonic council, the *Parliament* and *Synod* of Greece, shuddering at these impieties, resolved, unanimously, to revenge the cause of religion, by making war upon the Crissæans. Plutarch, in his life of Solon, tells us, that this legislator, who had already acquired great reputation for wisdom, rendered his name still more illustrious and respected, by exciting the Amphictyonic assembly to make this decree. The Crissæan war, which was called *Sacred*, and which lasted as many years as that of Troy, ended by the utter extirpation of the Crissæans; and it was at the close of this long and bloody war, 591 years B. C. that Eurylochus, the general of the Amphictyons, who from his valour, and the length of the siege of Crissa, was called the *New Achilles*, instituted the several kinds of Pythic combats at Delphos, which were afterwards constantly repeated, on the second year of each Olympiad (c).

(c) According to Diodorus Siculus, the second *sacred* war was declared by the Am-

phictyonic council, against the Phocians themselves, for cultivating the forfeited lands.

Pausanias, in his enumeration of the Musical Contests that were added to the ancient Pythic Games, at the close of the Crissæan war, tells us, that the Amphictyons proposed prizes, not only for those Musicians who sung best to the accompaniment of the *Cithara*, the only combat at the first institution of these Games, but others, both to such as should sing best to the accompaniment of the *Flute*, and to those who, with the greatest precision and taste, played on that instrument alone, without Singing (*d*).—Here began the separation of Music and Poetry. All the Trials of skill, all the performances at banquets, festivals, and sacrifices, have hitherto been confined to *Vocal Music*, accompanied by instruments indeed, but where Poetry had an important concern; at least, no instrumental Music, without vocal, since the contest between Apollo and Marsyas, is mentioned in ancient authors, before this time, except that of the Trumpet (*e*); the Lyre and Flute having, in public exhibitions, been mere attendants on the voice, and on Poetry.

This was soon after the time when Sacadas is recorded to have played his *Pythic Air*, on the Flute, at Delphos, which reconciled Apollo (or his priest), to that instrument; who, till then, was said to have had it in abhorrence ever since the contest with Marsyas. This Musician was not crowned the first time he played at the Pythic Games, but in the two subsequent Pythiads he obtained the prize, which furnishes a proof that in-

lands of the sacrilegious Crissæans, which had been decreed, by the Oracle of Apollo, to lie eternally waste. In this war, the Phocians took from the temple of Delphos, the *Loretto* of ancient times, more spoils than Alexander the Great did afterwards from Darius, at Susa and Persepolis, amounting, by the wonderful computation of Quintus Curtius, to 150,000 talents, or, according to Arbuthnot, twenty-nine millions sterling! This war was begun 355 years B. C. and, after continuing nine

years, ended in the ruin of the Phocians, though they had the Athenians and Lacedæmonians for their allies.

(*d*) Pausanias, in pursuing his account of the renewal of these games, tells us, that Cephallen, the son of Lampus, distinguished himself by singing to his own accompaniment on the lyre; the Arcadian Echembrotus, by accompanying upon the flute; and Sacadas of Argos, by playing upon that instrument, alone.

(*e*) *Ubi supra.*

strumental

strumental Music, separated from vocal, began now to be successfully cultivated among the Greeks.

After this, the same Games and Combats were established at Delphos, as at Olympia. The Amphictyons retrenched the accompaniment of Flutes, on account of its being too plaintive, and only fit for lamentations and elegies, to which it was chiefly appropriated. A proof of this, says Pausanias, is given in the offering which Echembrotus made to Hercules of a bronze Tripod, with this inscription.

“Echembrotus, the Arcadian, dedicated this Tripod to Hercules, after obtaining the prize at the Games of the Amphictyons, where he accompanied the elegies that were sung in the assembly of the Greeks, with the Flute.”

At the 8th Pythiad, 559 years B. C. a crown was given to players upon *stringed Instruments, without singing*, which was won by Agelaus of Tegea.

The prize given to the victors at the Pythic Games, consisted either of Apples, consecrated to Apollo, or, as Pindar informs us, of Laurel Crowns, which, according to Pausanias, were peculiar to the Pythic Games, in allusion to Apollo's passion for Daphne.

Strabo, speaking of the different kinds of contests established by the Amphictyons, at the first Pythic Games, after the Crisæans were subdued, mentions a particular species of Composition, which was sung to the Hymn in praise of Apollo, and accompanied by instruments. It was called the *Pythian Nome* (f); and was a kind of long *Cantata*, consisting of five parts, or *Movements*, all alluding to the victory obtained by the God, over the serpent Python. The first part was called *the Prelude*, or preparation for the fight; the second, *the Onset*, or beginning of the combat; the third, *the Heat of the Battle*; the fourth, *the Song of Victory*, or the insults of Apollo over

(f) Νομος Πυθικός· ὡς τε δ' αὐτοῦ μέρη εἰσὶν, ἀνάγκησιν, ἀμπεῖραι, κατὰ κλεισμός, ἰαμβοὶ καὶ

δακτυλοὶ, σιγῆς. Strab. Geog. lib. ix. p. 421.

the serpent *Python*, composed of Iambics and Dactyls; and the fifth, *the hissing of the dying monster*.

This Air, Pausanias tells us, was composed, and first played at Delphos, by Sacadas, who, according to Plutarch (g), was an excellent Poet, as well as Musician, and author of Lyric Poems; of Elegies; and of a Composition consisting of three Strophes, or Couplets, performed successively in the three Modes chiefly used in his time, the Dorian, Phrygian, and Lydian; and this air was called *Trimeles*, on account of its changes of modulation (h). Both Plutarch and Pausanias mention his having been celebrated by Pindar; but as we are not in possession of all that Poet's works, this honourable testimony cannot be found at present. The reputation of Sacadas must doubtless have been very great, for Plutarch says, that his name was inserted in the Pythic list of good Poets, and Pausanias, that he found his statue, with a Flute in his hand, on Mount Helicon, and his tomb at Argos.

I am the more particular in speaking of this personage, as he is the first upon record who detached Music from Poetry, and who, though a good Poet himself, engaged the public attention in favour of *mere instrumental Music*; a *Schism* that has been as severely censured as any one in the church. The censurers, however, have forgot that such *Schisms*, in the *Arts*, are as much to be desired, as those of religion are to be avoided; since it is by such *separations* only, that the different Arts, and different beauties of the *same* Art, becoming the objects of *separate* and exclusive cultivation, are brought to their last refinement and perfection.

After Sacadas had pointed out the road to fame, by means of instrumental Music, it was so successfully pursued by Pythocritus, of Sicyon, whose statue was erected at Olympia, that he gained the prize at Delphos, as a *Solo* player on the Flute, six different times (i).

(g) *De Musica.*

(h) See Dissert. p. 64.

(i) This Musician must have been near thirty years in collecting these honours, and

Sir Isaac Newton (*k*) observes, that by the encouragement of the Pythic Games, after their regular celebration was established, several eminent Musicians and Poets flourished in Greece, and gives a catalogue of more than twenty, concerning several of whom particular mention has been made already, in the course of this work: of others, whose names are familiar to the eyes and ears of classical readers, I shall give such information as ancient authors, and their commentators, furnish; confining my biographical researches, however, chiefly to such heroes of the Pipe and String as seem in a particular manner to belong to the Pythic Games, or to have merited notice from their early cultivation of *Lyric Poetry*.

ALCMAN, the first of these ancient Bards, was a native of Sardis, and flourished about 670 years B. C. Heraclides of Pontus assures us, that he was a slave in his youth at Sparta; but that by his good qualities and genius, he acquired his freedom, and a considerable reputation in Lyric Poetry. He was consequently an excellent performer on the Cithara; and, if he was not a Flute player, he at least sung verses to that instrument. Clemens Alexandrinus makes him author of Music for choral dances (*l*); and, according to Archytas Harmoniacus, quoted by Athenæus (*m*), Alcman was one of the first and most eminent composers of songs upon love and gallantry. If we may credit Suidas, he was the first who excluded Hexameters from verses that were to be sung to the Lyre, which afterwards obtained the title of *Lyric Poems*. And Ælian tells us, that he was one of the great Musicians that was called to Lacedæmon, by the exigencies of the state, and that he sung his airs to the sound of the Flute; by which I understand that

and consequently as long superior to all his competitors; let any one figure to himself such an institution in England, and he will recollect the names of Musicians whose talents were so clearly above all their contemporaries, that they must have merited

the prize for nearly an equal number of years.

(*k*) Chronol. p. 60.

(*l*) Χορὸς.

(*m*) Lib. xiii. cap. 8. p. 600.

the Spartan army, in which all the evolutions were made to the sound of the Flute, was in want of a good master for that instrument, and invited Alcman to supply that place.

Ælian (*n*) says, that the Lacedæmonians had no idea of literature; applying themselves merely to gymnastic exercises, and to the art of war: whenever they wanted the assistance of the Muses they called in strangers. Thus they had recourse to Thaletas, Tyrtæus, Terpander, Alcman, and others.

Plutarch (*o*) likewise tells us, that though they banished Science, as inconsistent with their military polity, yet they were much addicted to *Poetry* and *Music*, such as raised their minds above the ordinary level, and inspired them with a generous ardour and resolution for action. Their compositions, consisting only of grave and moral subjects, were easy and natural, in a plain dress, and without embellishment, containing nothing but the just commendations of those great personages, whose singular wisdom and virtue had made their lives famous and exemplary, and whose courage in defence of their country had rendered their deaths honourable and happy. — They made use of a peculiar measure in these songs, when their army was in march towards an enemy, which being sung in a full chorus to their Flutes, seemed proper to excite in them a generous courage and contempt of death. Lycurgus was the first who brought this military Music into the field.

This agrees with what has already been related of the Lacedæmonians and Arcadians in general, from Thucydides (*p*); and though there can be no doubt remaining of their use of Music in military discipline (*q*), in religious ceremonies, and at pub-

(*n*) *Var. Hist.* lib. xii. cap. 50.

of Flutes? answered, that when all moved regularly to Music, it was easy to distinguish a brave man from a coward.

Plut. *Lac. Apoph.*

lic festivals, yet, it seems inconsistent that a people so selfish, and abounding so much in national prejudices as the Spartans, should *encourage* Music and Poetry in *other countries*, by being at the expence of tempting such strangers as had cultivated those arts with the most success, to come and practise them in their *own* (r).

The Musician Alcman, according to Athenæus, was not more remarkable for a musical genius, than for a voracious appetite; and Ælian numbers him among the greatest gluttons of antiquity (s). The same author tells us of Aglaïs, a musical lady, who had no other talent or occupation than that of sounding the Trumpet, and of *eating*; however, the account of her usual repast is too marvellous to be related, even after Ælian.

But these are not the only musical personages in antiquity, whose insatiable appetite is recorded by Athenæus and Ælian.

The disease called *Bulimia* (t), has not been confined to ancient Musicians; it is not uncommon among the modern: but why a sedentary employment, in which neither air, nor exercise, contributes to sharpen the appetite of its professors, should be remarkable for producing great hunger, and precipitating digestion, is not easy to comprehend.

The tomb of *Alcman* was still subsisting at Lacedæmon, in the time of Pausanias. But nothing, except a few fragments, are now remaining of the many poems attributed to him by antiquity.

The celebrated Bard ALCÆUS was born at Mitylene, the capital of Lesbos. He flourished, according to the Chronicle

(r) Indeed, this is the case with respect to *Singers* in England; we love good singing, but will not be at the trouble or expence of establishing a school where our natives might be taught; which a little resembles the conduct of those men of pleasure, who, not having time or patience to *make love*, seek it where it can be purchased

ready made.

(s) Perhaps he foresaw how great a family he should have to feed in future, for he is said to have died like Pherecydes the philosopher, and preceptor of Pythagoras, of the *pedicular* disease.

(t) Βουλμία, vel βελμία, one that could eat as much as an ox.

of Eusebius, in the 44th Olympiad, that is to say, about 604 years B. C. and was consequently the countryman and cotemporary of Sappho, with whom, it is pretended, he was violently enamoured (x).

Alcæus was no more a hero, than his predecessor Archilochus: like him, he was a votary of Mars before he entered into the service of the Muses; and, like him, he lost both his buckler and his honour in the first engagement. He is much commended by Horace, not the less, perhaps, from the similitude of their genius, pursuits, and military achievements (y). If all his adventures had come down to us, they must have been curious. After playing the lover, he became a patriot; caballed with discontented citizens; subverted the government; contributed to place Pittacus, one of the seven sages, at the head of it (z); then, regarding him as his rival, with still more zeal and activity, joined the adverse party; composed satires and libels against him, filled with the most bitter invectives, and abusive language (a); attacked him in a pitched battle, in which, his party being defeated, he became the prisoner of Pittacus, who made no other use of the power, which fortune had given him over his life and liberty, than generously to restore to him both. Alcæus, in setting up for a reformer of the

I fain to Sappho would a wish impart,
But fear locks up the secret in my heart.

S A P P H O.

Thy down-cast looks, respect, and timid
air,
Too plain the nature of thy wish declare;
If lawless, wild, inordinate desire,
Did not with thoughts impure thy bosom
fire,
Thy tongue and eyes, by innocence made
bold,
Ere now the secret of thy soul had told.

M. le Fevre observes, that Sappho was not in her usual good humour, when she gave so cold an answer to a request, for which, at another time, perhaps, she would not have waited.

(y) —*Relictâ, non bene, parmula.*

Hor. Od. ii. vii. x.

(z) In ancient times, philosophers did not disdain to undertake the cause of the people, in pulling down tyrants---nor did they forget their own, so far as to refuse taking their place, when opportunity offered; for it appears, that, however, even a primitive patriot may have had the interest of the public at heart, he seldom was unmindful of his own.

(a) Diog. Laert. lib. i. sect. 76. Val. Max. lib. iv. cap. 1. ex. 6.

state,

state, undertook the redress of grievances, not because they were grievances, but because he himself was not the author of them. He seems to have been possessed of a perturbed spirit; how such a spirit could be united with the tranquil pleasures attending the study of Poetry and Music, is difficult to say (b). After the failure of his political enterprises he travelled into Egypt; but where his terrestrial troubles and travels ended, is uncertain. With respect to those talents, which entitle him to a place in this work, they have never been disputed; for he is generally allowed to have been one of the greatest *lyric poets* in antiquity; and as he lived before the separation of the twin-sisters, Poetry and Music, this character must imply that he was the friend and favourite of both. His numerous poems, on different subjects, were written in the Eolian dialect, and chiefly in a measure of his own invention, which has, ever since, been distinguished by the name of *Alcaic*. Of these only a few fragments remain. He composed Hymns, Odes, and Epigrams, upon very different subjects; sometimes railing at tyrants, and singing their downfall; sometimes his own military exploits; his misfortunes; his sufferings at sea; his exile; and all, according to Quintilian, in a manner so chaste, concise, magnificent, and sententious, and so nearly approaching to that of Homer, that he well merited the *Golden Plectrum* bestowed upon him by Horace. Sometimes he descended to less serious subjects, singing cheerfully the praises of Bacchus, Venus, Cupid, and the Muses. But however pleasing his pieces of the lighter kind were thought, they were inferior to his other poems, in the opinion of Quintilian (c).

The adventures of SAPPHO, and the remains of her poetical works, are too well known to require recital here. A mu-

(b) There is an instance, however, in our own time, of one of the most military and tyrannical characters in Europe, not only cultivating both those arts, but ex-

tending his wish for universal monarchy, to every thing whence power, profit, or fame can be acquired.

(c) Instit. lib. x.

fical invention has, however, been attributed to her, of which it seems necessary to take some notice.

This celebrated poetess is said by Aristoxenus and Plutarch to have invented the *Mixolydian Mode*. It has already been shewn in the Dissertation (*d*), that the Lydian mode was the highest of the five original modes, having its lowest sound, *Proslambanomenos*, upon F #, the fourth line in the base. The *Mixolydian* was still higher, by half a tone; the *Hypermixolydian* a minor third higher, and the *Hyperlydian* a fourth higher. Plato, desirous of simplifying music, and of keeping the scale within moderate bounds, complains, in the third book of his Republic, of the licentiousness of these acute modes. Now if the only difference in the modes was the place they occupied in the great system, with respect to *gravity* or *acuteness*, the *invention*, as it was called, of this Mixolydian mode, may have been suggested to Sappho, by her having a voice of higher pitch than her predecessors; she was, perhaps, the Agujari of her time, and could transcend the limits of all former scales with equal facility. But though nature may have enabled this exquisite poetess to sing her verses in a higher key than any one had done before, yet as it is allowed but to few to surpass the common boundaries of human faculties and talents, it is probable that her successors, by attempting, with inferior organs, to ascend those heights, had given offence to Plato, and determined him to prohibit the use of this mode in his Republic, as indecorous, and too effeminate even for women. If, however, it be true, that the characteristic of the modes depended partly, if not principally, upon the *Rhythm* or *Cadence* (*e*), it seems not an improbable conjecture, that besides the difference of pitch, the novelty of Sappho's *Mixolydian* mode might, in a great measure, consist in her first applying to melody the measure called *Sapphic*, from her invention of it (*f*).

(*d*) P. 48.

(*e*) See Dissertation.

(*f*) *Intēger vitæ scelerisque purus.*
HOR.

This

This mode, as Plutarch informs us, was adopted by the tragic poets, as proper for *pathos*, and lamentation (*g*); a character for which it is not easy to account, without supposing other differences besides those of mere *Rhythm*, or *Pitch*; though both Plato and Plutarch evidently ascribe this character, in part, at least, to the circumstance of acuteness (*h*).

About the beginning of the sixth century, before the Christian æra, MIMNERMUS, according to Plutarch, had rendered himself remarkable, by playing upon the Flute a *Nome* called *Cradias*, which, Hesychius tells us, was an air for that instrument, usually performed at Athens, during the march, or procession, of the victims of expiation. Mimnermus was a lyric poet, and consequently a musician, of Smyrna, cotemporary with Solon. Athenæus gives to him the invention of *Pentameter verse*. His Elegies, of which only a few fragments are preserved, were so much admired in antiquity, that Horace preferred them to those of Callimachus (*i*). He composed a poem of this kind, as we learn from Pausanias, upon the battle fought between the people of Smyrna, and the Lydians, under Gyges. He likewise was author of a poem in elegiac verse, quoted by Strabo (*k*), which he entitled *Nanno*, and in which we may suppose he chiefly celebrated a young and beautiful girl of that name, who, according to Athenæus, was a player on the Flute, with whom he was enamoured in his old age. With respect to love matters, according to Propertius, his verses were more valuable than all the writings of Homer (*l*). And Horace bears testimony to his abilities, in de-

Three verses of this kind, closed with an Adonic verse, consisting of a Dactyl and Spondee, form the *Sapphic stanza*.

scribing

scribing that seducing passion (*m*); alluding to some much admired lines of this Greek poet, which have been preserved by Stobæus (*n*).

Poetry, and such music as the Greeks thought would most contribute to its embellishment, must now, from all the improvements which these arts had received since the time of Homer, a period of more than two hundred years, have been arrived at a great degree of perfection; and yet we find no *lyric poets*, whose works, or names, have survived, between Mimnermus and STESICHORUS, a much respected Bard, who, according to Athenæus, was born at Himera in Sicily. His first name was Tisias; but he acquired the title of Stesichorus (*o*) from the changes he made in the manner of performing the Dithyrambic chorus, which was *sung* and *danced* round the altar, or statue of Bacchus, during the worship of that God. In what these changes consisted, it is difficult to discover; luckily, it is a piece of knowledge, of which we stand in no great need at present (*p*).

Our latest chronologers agree in fixing the time of his death to have been 556 B. C. A character of his numerous poems may be seen in Quintilian (*q*), who speaks of them as subsisting in his time. At present, only a few fragments of them re-

(*m*) *Si Mimnermus uti censet, sine amore
jocisque,
Nil est jucundum, vivas in amore jocisque.*

Epist. VI. lib. i. v. 65.

If, as wise Mimnermus said,
Life unblest with love and joy,
Ranks us with the senseless dead,
Let these gifts each hour employ.

(*n*) Τις δὲ βίος, τί δὲ τέρπνον ἀπὲρ χροῦς Ἀ-
φροδίτης, &c.

What is life and all its pride,
If love and pleasure be denied?
Snatch, snatch me hence, ye Fates, when-
e'er

The am'rous bliss I cease to share.
Oh let us crop each fragrant flow'r,
While youth and vigour give us pow'r;
For frozen age will soon destroy
The force to give or take a joy;

And then, a prey to pain and care,
Detested by the young and fair,
The sun's blest beams will hateful grow,
And only shine on scenes of woe!

(*o*) Indeed Suidas says, that he was so called, from being the first who accompanied a chorus with *κithαρῳδία*---singing to the Lyre: or, for instituting a chorus that danced to the Lyre, accompanied by singing. But whether the novelty was in the singing, or in the lyre, or both, is still to be inquired.

(*p*) Several of the epistles which go under the name of Phalaris, tyrant of Agrigentum, which occasioned the well known dispute between Boyle and Bentley, in the beginning of the present century, are addressed to Stesichorus.

(*q*) Instit. lib. x. cap. 1.

main

main. Among his musical improvements, Plutarch enumerates the changes which he made in the *Harmatian*, or *chariot air*, composed by Olympus (r).

SIMONIDES, who flourished about this time, is so frequently celebrated by ancient writers, that it seems necessary to be somewhat particular in my account of him. There were in antiquity many poets of that name; but by the Marbles it appears, that the eldest and most illustrious of them was born in the 55th Olympiad, 538 years B. C. and that he died in his ninetieth year; which nearly agrees with the chronology of Eusebius. He was a native of Ceos, one of the Cyclades, in the neighbourhood of Attica, and the preceptor of Pindar. Both Plato and Cicero give him the character not only of a good poet and musician, but speak of him as a person of great virtue and wisdom. Such longevity gave him an opportunity of knowing a great number of the first characters in antiquity, with whom he was in some measure connected (s). He is mentioned by Herodotus; and Xenophon, in his Dialogue upon Tyranny, makes him one of the interlocutors with Hiero king of Syracuse. Cicero (t) alleges, what has often been quoted in proof of the modesty and wisdom of Simonides, that when Hiero asked him for a definition of God, the poet required a whole day to meditate on so important a question; at the end of which, upon the prince putting the same question to him a second time, he asked *two* days respite; and, in this manner, always doubled the delay, each time he was required to answer it; till, at length, to avoid offending his patron by more disappointments, he frankly confessed that he

(r) Ἀρματιὸς νοῦμος, so called, according to Hesychius, for its imitating the rapid motion of a *chariot* wheel; or, as being, from its fire and spirit, proper to animate the horses that draw the chariot, during battle.

(s) This may want some explanation. It appears in Fabricius, from ancient au-

thority, (*Bib. Græc.* vol. i. p. 591.) that Simonides was cotemporary, and in friendship with Pittacus of Mitylene; Hipparchus, tyrant of Athens; Pausanias, king of Sparta; Hiero, tyrant of Syracuse; with Themistocles; and with Alcibiades, king of Thessaly.

(t) *De Nat. Deor.*

found the question so difficult, that the more he meditated upon it, the less was his hope of being able to solve it.

In his old age, perhaps from seeing the respect which money procured to such as had lost the charms of youth, and the power of attaching mankind by other means, he became somewhat mercenary, and avaricious. He was frequently employed by the victors at the Games to write Panegyrics and Odes in their praise, before his pupil Pindar had exercised his talents in their behalf; but Simonides would never gratify their vanity in this particular, till he had first tied them down to a stipulated sum, for his trouble; and, upon being upbraided for his meanness, he said, that he had two coffers, in one of which he had, for many years, put his pecuniary rewards; the other was for honours, verbal thanks, and promises; that the first was pretty well filled, but the last remained always empty. And he made no scruple to confess, in his old age, that of all the enjoyments of life, the love of money was the only one of which time had not deprived him.

He was frequently reproached for this vice; however, he always defended himself with good humour. Upon being asked by Hiero's queen, whether it was most desirable to be Learned or Rich, he answered, that it was far better to be rich; for the learned were always dependent on the rich, and waiting at their doors; whereas he never saw rich men at the doors of the learned. When he was accused of being so fordid, as to sell part of the provisions with which his table was furnished by Hiero, he said he had done it, in order "to display to the world the magnificence of that prince, and his own frugality." To others he said, that his reason for accumulating wealth was, that "he would rather leave money to his enemies, after death, than be troublesome to his friends, while living."

He obtained the prize in poetry at the Public Games, when he was fourscore years of age. According to Suidas, he added four letters to the Greek alphabet; and Pliny assigns to him
the

the eighth string of the lyre; but these claims are disputed by the learned.

Among the numerous poetical productions of which, according to Fabricius, antiquity has made him the author, are many songs of victory and triumph, for athletic conquerors at the Public Games. He is likewise said to have gained there, himself, the prize in elegiac poetry, when Æschylus was his competitor.

His poetry was so tender and plaintive, that he acquired the cognomen of *Melicertes*, *sweet as honey* (u); and the *tearful eye* of his Muse was proverbial.

“Simonides, says an elegant modern writer, and excellent judge of every species of literary merit, was celebrated by the ancients for the sweetness, correctness, and purity of his style, and his irresistible skill in moving the passions.—Dionysius places him among those polished writers, who excel in a smooth volubility, and flow on, like plenteous and perennial rivers, in a course of even and uninterrupted harmony (x).”

It is to Dionysius that we are indebted for the preservation of the following fragment of this poet. Danaë being, by her merciless father, inclosed in a chest, and thrown into the sea with her child, when night comes on, and a storm arises, which threatens to overset the chest; she, weeping, and embracing the young Perseus, cries out:

Sweet child! what anguish does thy mother know,
Ere cruel grief has taught thy tears to flow!
Amidst the roaring wind's tremendous sound,
Which threats destruction, as it howls around,
In balmy sleep thou liest, as at the breast,
Without one bitter thought to break thy rest.—
The glim'ring moon in pity hides her light,
And shrinks with horror at the ghastly sight.

(u) *Mæstius lacrimis Simonideis.* CATULLUS.

(x) See the Adventurer, No. 89.

Didst thou but know, sweet innocent ! our woes,
 Not opiate's pow'r thy eye-lids now could close.
 Sleep on, sweet babe ! ye waves in silence roll,
 And lull, O lull to rest ! my tortur'd soul.

There is a second great poet of the name of *Simonides* recorded on the Marbles, supposed to have been his grandson, and who gained in 478 B. C. the prize in the Games at Athens.

BACCHYLIDES was the nephew of Simonides, and the cotemporary and rival of Pindar. Both sung the victories of Hiero at the Public Games. Besides Odes to athletic victors, he was author of *Love Verses* ; *Profodies* ; *Dithyrambics* ; *Hymns* ; *Pæans* ; *Hyporchemes*, and *Parthenia*, or songs to be sung by a chorus of virgins at festivals. The chronology of Eusebius places the birth of Bacchylides in the 82d Olympiad, about 450 B. C.

We are now arrived at that period of the Grecian musical history, when PINDAR became the poetical historiographer of the champions at the Sacred Games ; and his records of their achievements have been more durable, than if they had been inscribed upon adamantine tables. The marble statues, towering columns, and massive monuments, erected to the honour of these heroes, have perished ; and oblivion has swept away all memorials of them, except those contained in the songs of this great poet.

Pindar was born at Thebes in Bæotia, about 520 years B. C. He received his first musical instructions from his father, who was a Flute-player by profession ; after which, according to Suidas, he was placed under Myrtis, a lady of distinguished abilities in lyric poetry. It was during this period, that he became acquainted with the poetess Corinna, who was likewise a student under Myrtis. Plutarch tells us, that Pindar profited from the lessons which Corinna, more advanced in her studies, gave him at this school. It is very natural to suppose, that the first poetical effusions of a genius, so full of fire and imagination

tion as that of Pindar, would be wild and luxuriant; and Lucian has preserved six verses, said to have been the exordium of his first essay, in which he crowded almost all the subjects for song, which ancient history and mythology then furnished. Upon communicating this attempt to Corinna, she told him, smiling, that he should sow with the hand, and not empty his whole sack at once. Pindar, however, soon quitted the leading-strings of these ladies, his poetical nurses, and became the disciple of Simonides, now arrived at extreme old age; after which he soon surpassed all his masters, and acquired great reputation over all Greece; but, like a true *prophet*, was less honoured in his own country, than elsewhere; for at Thebes he was frequently pronounced to be vanquished, in the musical and poetical contests, by candidates of inferior merit.

The custom of having these public Trials of skill, in all the great cities of Greece, was now so prevalent, that but little fame was to be acquired by a Musician or Poet, any other way than by entering the lists; and we find, that both Myrtis and Corinna publicly disputed the prize with him at Thebes (*y*). The love of fame produces more rancorous rivalry, than the love of money, or even of woman. A public contention with Myrtis, his *alma mater*, and with his *sister student*, Corinna, seems unnatural; but there are few ties which can keep ambition within due bounds. He obtained a victory over Myrtis, but was vanquished five different times by Corinna (*z*). The judges, upon occasions like these, have been frequently accused of partiality or ignorance, not only by the vanquished, but by posterity: and if the merit of Pindar was pronounced inferior to that of Corinna five several times, it was, says Pausanias, because the judges were more sensible to the charms of beauty, than to those of Music and Poetry (*a*). Was it not strange,

(*a*) *Lib. ix. cap. 22.* Pausanias says,
that Corinna was one of the most beautiful
women of her time, as he judged by a
picture of her, which he saw at Tanagris,
in

said the Scythian Anacharsis, that the Grecian artists were never judged by artists, their peers?

Mortifications are at least as necessary to a young poet, as to a young sinner. Pindar, before he quitted Thebes, had the vexation to see his Dithyrambics traduced, abused, and turned into ridicule, by the comic poets of his time; and Athenæus tells us, that he was severely censured by his brother Lyrics, for being a Lipogrammatist, and composing an ode from which he had excommunicated the letter S. Whether these censures proceeded from envy, or contempt, cannot now be determined; but they were certainly useful to Pindar, and it was necessary that he should be lashed for such puerilities. Thebes seems to have been the *purgatory* of our young Bard; when he quitted that city, as his judgment was matured, he avoided most of the errors for which he had been chastised, and suddenly became the wonder and delight of all Greece. Every hero, prince, and potentate, desirous of lasting fame, courted the Muse of Pindar.

He seems frequently to have been present at the four great festivals, of the Olympian, Pythian, Nemean, and Isthmian Games, as may be inferred from several circumstances and expressions in the odes, which he composed for the victors in them all. Those at Olympia, who were ambitious of having their achievements celebrated by Pindar, applied to him for an ode, which was first sung in the *Prytaneum*, or town-hall of Olympia, where there was a banquetting room, set apart for the entertainment of the conquerors. Here the ode was rehearsed by a chorus, accompanied by instruments. It was afterwards performed in the same manner at the triumphal entry of the victor into his own country, in processions, or at the sacrifices that were made with great pomp and solemnity on the occasion (b).

in the place where the public exercises were performed. She was represented with her head ornamented by a ribbon, as a me-

morial of the victories she had obtained over Pindar at Thebes.

(b) West's *Dis. on the Olymp. Games*, §16.

But

But, as some conquerors were not so fortunate as to have Poets for their friends, or so rich as to be able to purchase odes on their particular victories, which were rated very high by Bards of the first class; in honour of such, the old Hymn to Hercules, of Archilochus, was sung by the friends of the conquerors only, if they could not afford to engage a band of professed musicians. The scholiast on Pindar's 9th Olympic tells us, that to supply the want of a Citharist, Archilochus framed a word in imitation of the sound of a Cithara, which word (*Tenella*, Τηνέλλα), when there happened to be no Musician present, the leader of the chorus chanted forth, and was answered by the rest of the chorus, in the words of the Hymn, Ω Καλλίνικε, χαιρε, O glorious Victor, hail! at every comma, or pause of which, this burden was again repeated (c).

Pindar, in his second Isthmian Ode, has apologized for the mercenary custom among Poets, of receiving money for their Compositions. "The world, says he, is grown interested, and thinks in general with the Spartan philosopher, Aristodemus, that *money only makes the man*: a truth which this sage himself experienced, having with his riches lost all his friends." It is supposed that Pindar here alludes to the avarice of Simonides, who first allowed his Muse to sell her favours to the best bidder. But if the rich want wit and fame, and the Poet wants money, the commutation seems as fair as any that is carried on upon the Exchange of London or Amsterdam. It is in

(c) *Ibid.* Are we to suppose from this Trisyllable, serving as a representation of the twang of a lyre, that the instrument had only *three strings* in the time of Archilochus? Indeed, as this poet lived before either Terpander or Pythagoras had loaded it with seven or eight strings, a Tetrachord, or four sounds, were its utmost extent in his time. Now it would be a research truly worthy the curiosity of some profound musical antiquary, to try to discover which three sounds of the Tetra-

chord were imitated, and by what intervals, and tone of voice, the word *Tenella* could have been made a true *Arpeggiatura*? Suidas tells us, that this word had no signification, but was used as an imitation of a particular way of striking the lyre (a kind of *tol-de-rol* flourish), when a victor was declared at the Games; and the words Τηνέλλα, καλλίνικε, seem to have become, from this Hymn of Archilochus, a common form of congratulation, or rather acclamation; the *bravissimo!* of the Greeks.

the true spirit of commerce to barter superfluities for what we stand most in need; and it can never be called a ruinous or losing trade, but when the rich, for want of judgment or taste, purchase *bad Poetry*, or the Poet is *ill paid, for good*. Gratian, among his maxims for raising a man to the most consummate greatness, advises him to perform extraordinary actions, and to secure a good Poet.

There is no great Poet or Musician in antiquity, whose moral character has been less censured than that of Pindar. Plutarch has preserved a single verse of his *Epicedium*, or *Dirge*, that was sung at his funeral, which short, and simple as it is, implies great praise. *This man was pleasing to strangers, and dear to his fellow citizens* (d). His works abound with precepts of the purest morality; and it does not appear that he ever traduced even his enemies; comforting himself, for their malignity, by a maxim which he inserted in his first Pythic, and which afterwards became proverbial, *That it is better to be envied than pitied* (e).

Pausanias says, that the character of Poet was truly consecrated, in the person of Pindar, by the God of verse himself, who was pleased, by an express oracle, to order the inhabitants of Delphos to set apart, for Pindar, one half of the first-fruit offerings, brought by the religious to his shrine, and to allow him a conspicuous place in his Temple; where, in an iron chair, he used to sit and sing his Hymns in honour of that God. This chair was remaining in the time of Pausanias, several centuries after, and shewn to him as a relic, not unworthy of the sanctity and magnificence of that place.

A Bard who *sung* like Pindar, would be heard with the same rapture in a pagan Temple, as a Farinelli in an Italian church: and, as both would draw together crowded congregations, both would be equally caressed and encouraged by the priests.

(d) Ἀρμενος ἢν ξεινοισιν ἀνὴρ ὄδε, καὶ φίλος
αἰσίοις. *De Anim. Proc.*

(e) Κρείσσων γὰρ οἰκτιρῶν φόβος.

But

But though Pindar's Muse was pensioned at Delphos, and well paid by princes and potentates elsewhere, she seems, however, sometimes to have sung the spontaneous strains of pure friendship. Of this kind were, probably, the verses bestowed upon the Musician Midas, of Agrigentum, in Sicily, who had twice obtained the palm of victory, by his performance on the Flute, at the Pythic Games (*f*). It is in his 12th Pythic Ode, that Pindar celebrates the victory of Midas *over all Greece, upon that instrument, which Minerva herself had invented* (*g*).

Fabricius tells us, that Pindar lived to the age of ninety; and, according to the chronology of Dr. Blair, he died 435 years B. C. aged eighty-six. His fellow-citizens erected a monument to him, in the Hippodrome at Thebes, which was still subsisting in the time of Pausanias; and his renown was so great after his death, that his posterity derived very considerable honours and privileges from it. When Alexander the Great attacked the city of Thebes, he gave express orders to his soldiers to spare the house and family of Pindar. The Lacedæmonians had done the same before this period; for when they ravaged Bæotia, and burned the capital, the following words were written upon the door of the Poet: *forbear to burn this house, it was the dwelling of Pindar*. Respect for the memory of this great Poet continued so long, that even in Plutarch's time, the best part of the sacred victim, at the Theoxenian festival, was appropriated to his descendants.

(*f*) This Midas is a very different personage from his long-eared majesty of Phrygia, whose decision in favour of Pan had given such offence to Apollo, (see p. 272 of this vol.) as is manifest, indeed, from his having been cotemporary with Pindar.

(*g*) The most extraordinary part of this Musician's performance, that can be gathered from the scholiast upon Pindar, was his finishing the *Solo*, without a *Reed*, or

Mouth-piece, which broke accidentally while he was playing. The legendary account given by the Poet in this Ode, of the occasion upon which the Flute was invented by Minerva, is diverting; "it was, says he, to imitate the *howling* of the Gorgons, and the hissing of their snakes, which the Goddess had heard when the head of Medusa, (one of these three *Anti-Graces*) was cut off by Perseus."

All the registers, in which the names and victories of the successful candidates at the sacred Games were recorded, have been so long lost, that no regular series of events at these solemnities can be now expected: I shall, however, resume the subject, and give the reader such farther information concerning them, as I have been able to glean from ancient authors. Indeed, the names and feats of Musicians, that have been crowned at the public Games, are not so difficult to find, as the time when they flourished; and an event without a date to hang it upon, does but litter the mind of the reader; it is a kind of vagabond, without a settlement, which no one is willing to take in.

Plutarch, who, on many occasions seems to have consulted the registers of the sacred Games, tells us, in his life of Lysander the Spartan general, that the Musician Aristonous, who had *six times* obtained the prize for singing to the *Cithara* (*h*), in the *Pythic Games*, flattered Lysander so far as to tell him, that if ever he gained another victory, he would be publicly proclaimed his disciple and servant. This was after the Spartan had taken the city of Athens, beaten down the walls, and burned all the ships in the harbour, *to the sound of Flutes*; an event which happened in the 94th Olympiad, 404 years B. C.

Indisputable testimonies are to be found in ancient authors, of the continuation of Musical Contests at these Games, till their final abolition after the establishment of the christian religion. I shall only mention the victory which Pausanias (*i*) informs us was gained there by Pylades, upon the *Cithara*, about the 94th Pythiad, 211 years before Christ: the *Pythic Laurel*, which both Suetonius and Dio Cassius inform us, Nero, as a *Citharædist*, who had been victor at those Games, brought out of Greece, 66 years after the same Æra: and the two *Pythic* victories, recorded in the Oxford Marbles,

(*h*) Κίθαριδος.

(*i*) In *Arcad.* lib. viii.

among

among innumerable others, which C. Ant. Septimius Publius, the Citharædist, obtained during the reign of the emperor Septimius Severus, about the end of the second century.

To the musical premiums given at Delphos, according to Plutarch (*k*), was added, in later times, one for Tragedy; and, by degrees, various other contests were admitted; among which, an *exhibition* for Painters appears to have had a place (*l*); and, if no premium was given to be disputed by Sculptors, the great number of victors, whose statues they had to erect at the public cost, must have been a sufficient incitement to them to aim at excellence in their profession (*m*). But an account of any other art or artists, than Music and Musicians, would lead me far beyond the limits of my plan.

I shall close this article, therefore, by observing, that *Games* in honour of Apollo, and called *Pythic*, were instituted, not only at Delphos, but at Miletus in Ionia, at Magnesia, Sida, Perga, and Thessalonica; and in all these, *Music* and *Poetry* were the chief subjects of contest (*n*.)

Of the Nemean Games.

These Games, which had their name from *Nemea*, a village and grove in Arcadia, were of such high antiquity, that the ancients themselves, in the time of Pausanias, were not agreed concerning the origin of their institution. Some assert them to have been a funeral solemnity, instituted in honour of Arche-morus, by the seven champions who led the army to Thebes: others, that they were founded by Hercules, in honour of Jupiter, after he had slain the *Nemean* lion. The exercises

(*k*) *Sympos.*

(*l*) *Plin.* 35. 9.

(*m*) Nero took thence five hundred bronze statues of Gods and illustrious personages; and yet, after this robbery, in the time of Pausanias, the number still re-

maining was prodigious, without enumerating those which had been placed there to commemorate the merit of Athletics, Musicians, and Poets, in their particular professions.

(*n*) Meursius, *Græcia feriatæ.*

were nearly the same as at Olympia, as appears from the subjects of the Nemean Odes of Pindar. However, that *Musical Performances* usually constituted a part of the exercises and amusements at this solemnity, is a fact so fully ascertained by a passage in Plutarch's life of Philopœmen, and corroborated by Pausanias, that I shall give the narration entire, and leave it to speak for itself.

“ Philopœmen being elected a second time general of the Achæans, soon after he had gained the celebrated battle of Mantinea, entered the theatre at the Nemean Games, *while the Musicians were disputing the Musical Prize*. At the moment that Philopœmen entered, the Musician Pylades, of Megalopolis, happened to be singing to the Lyre, the beginning of a song composed by Timotheus, called *the Persians* :

Behold the hero, from whose glorious deeds

Our greatest blessing, liberty, proceeds (o) !

The subject of the verse, the energy with which it was uttered, and the beauty of the singer's voice, struck the whole assembly. They instantly cast their eyes on Philopœmen, and, with the most violent applause and acclamation, animated with the hopes of recovering their former dignity, they assumed their ancient spirit and confidence of victory. Pausanias adds, that they unanimously cried out, that nothing could be more applicable than this poem was to the brave general, who had undertaken to command their army (p).”

(o) It is remarkable, that the original of these lines is an *Hexameter*,

Κλεινον ελευθερίας τευχω μεγαυ Ελλαδι κοσμον.
which confirms what has been advanced (p. 364.) concerning the priority of this verse, and, consequently, of regular and unmixed Musical Rhythms, to metres of unequal feet, and Music of unequal bars. Indeed, Plutarch asserts, expressly, (*de Mus.*) that the Nomes made to be sung to the Cithara, were originally composed entirely of Hexameters ; and he alleges, Timotheus,

the very author of the verse in question, as a proof of it ; who, though he was an innovator, yet did not venture to compose his first Nomes entirely in Dithyrambic, or irregular measures, but *mixed* them with Hexameters, hoping to take, as it were *by sap*, the ears of old connoisseurs, so vigilant and well fortified against the irruption of *new* pleasures.

(p) This event happened in the third year of the 143d Olympiad, 206 years B. C.

Though

Though no other particulars are preserved concerning the Musician Pylades, than what Plutarch and Pausanias furnish, in relating this circumstance, yet concerning Timotheus, whose verses he sung, many incidents are come down to us, to some of which I shall give a place here.

TIMOTHEUS, one of the most celebrated Poet-Musicians of antiquity, was born at Miletus, an Ionian city of Caria, 446 years B. C. He was cotemporary with Philip of Macedon, and Euripides, and not only excelled in Lyric and Dithyrambic Poetry, but in his performance upon the Cithara. According to Pausanias (q), he perfected that instrument, by the addition of four new strings to the seven which it had before; though Suidas says it had nine before, and that Timotheus only added two, the tenth and eleventh, to that number.

The historical part of this work has hitherto consisted more of biographical anecdotes, than dry discussions concerning the dark and disputable points of ancient Music, which were purposely thrown into the Dissertation, to keep off, as much as possible, that lassitude and disgust which minute enquiries into matters, usually thought more abstruse than interesting, produce in the generality of readers. I must, however, now beg leave to stop the narrative a little, in order to state the several claims made in favour of different persons, who have been said to have extended the limits of the Greek Musical Scale.

Many ancient and respectable writers tells us, that before the time of Terpander, the Grecian Lyre had only four strings; and, if we may believe Suidas, it remained in this state 856 years, from the time of Amphion, till Terpander added to it three new strings, which extended the Musical Scale to a *Hep-tachord*, or seventh, and supplied the player with *two conjoint Tetrachords*.

It was about 150 years after this period, that Pythagoras is said to have added an eighth string to the Lyre, in order to

(q) *Lib. iii. cap. 12.*

complete the octave, which consisted of *two disjunct Tetrachords*.

These dates, of the several additions to the Scale at such distant periods, though perhaps not exact, may, however, if near the truth, show the slow progress of human knowledge, and the contented ignorance of barbarous times. But if we wonder at the Music of Greece remaining so many ages in this circumscribed state, it may be asked, why that of China and Persia is not better now, though the inhabitants of those countries have long been civilized, and accustomed to luxuries and refinements.

Boethius gives a different history of the scale, and tells us, that the system did not long remain in such narrow limits as a *Tetrachord*. Choræbus, the son of Athis, or Atys, king of Lydia, added a fifth string, Hyagnis a sixth, Terpander a seventh, and, at length, Lychaon of Samos, an eighth. But all these accounts are irreconcilable with Homer's Hymn to Mercury, where the Chelys, or Testudo, the invention of which he ascribes to that God, is said to have had seven strings (*r*). There are many claimants among the musicians of ancient Greece, to the strings that were afterwards added to these, by which the scale, in the time of Aristoxenus, was extended to two octaves. Athenæus, more than once, speaks of the *nine-stringed-instrument* (*s*); and Ion of Chios, a tragic and lyric poet, and philosopher, who first recited his pieces in the 82d Olympiad, 452 B. C. mentions, in some verses quoted by Euclid, the *ten-stringed Lyre* (*t*); a proof that the third conjoint tetrachord was added to the scale in his time, which was about fifty years after Pythagoras is supposed to have constructed the octachord (*u*).

(*r*) See p. 367.

(*s*) *Ἐνναχορδον οργανον*. *Lib. iv. § xiv.* Theocritus, *Id. viii.* speaks of a Syrix with nine notes, *συνεργα ἑνναφωνον*; but considering the extension of the Scale in his time, 262 B. C. it is no great wonder if

the simplest of instruments had a compass of nine sounds.

(*t*) *Δεκαχορδον λυρα*.

(*u*) Ion died, according to Fabricius vol. i. p. 681, 419 years B. C. and 78 after Pythagoras. Besides Tragedies and Dithy-

The different claimants among the Greeks to the same musical discoveries, only prove that music was cultivated in different countries; and that the inhabitants of each country invented and improved their own instruments, some of which happening to resemble those of other parts of Greece, rendered it difficult for historians to avoid attributing the same invention to different persons. Thus the single Flute was given to Minerva, and to Marsyas; the Syrinx, or Fistula, to Pan, and to Cybele; and the Lyre, or Cithara, to Mercury, Apollo, Amphion, Linus, and Orpheus. Indeed, the mere addition of a string or two to an instrument without a neck, was so obvious and easy, that it is scarce possible not to conceive many people to have done it at the same time.

With respect to the number of strings upon the lyre of Timotheus, the account of Pausanias and Suidas is confirmed in the famous *Senatus-Consultum* against him, already slightly mentioned in the Dissertation, but of which I shall give a more particular account.

This curious piece of antiquity is preserved at full length in Boethius (x). Mr. Stillingfleet (y) has lately given an extract from it, in proof of the simplicity of the ancient Spartan music. The fact is mentioned in Athenæus; and Casaubon, in his notes upon that author (z), has inserted the whole original text from Boethius, with corrections, to which I refer the learned reader. I shall here, however, give a faithful translation of this extraordinary Spartan *Act of Parliament*.

“Whereas Timotheus the Milesian, coming to our city, has dishonoured our ancient music, and, despising the Lyre of seven strings, has, by the introduction of a greater variety of notes, corrupted the ears of our youth; and by the number of his strings,

Dithyrambics, Ion composed Odes, Pæans, Hymns, and Scolia, or convivial songs. The three conjoint Tetrachords, Mes. Synem. and Diez. with which the Decachordon was furnished, consisted, perhaps, of

these sounds: BCDE, EFGA, ABb c d.

(x) *De Musica*, cap. i.

(y) *Prin. and Power of Harm.* § 185.

(z) *Animad. in Athen.* p. 386.

and

and the novelty of his melody, has given to our music an effeminate and artificial dress, instead of the plain and orderly one in which it has hitherto appeared; rendering melody infamous, by composing in the Chromatic, instead of the Enharmonic (a);—

————— The Kings and the Ephori have, therefore, resolved to pass censure upon Timotheus for these things: and, farther, to oblige him to cut all the superfluous strings of his eleven, leaving only the seven tones; and to banish him from our city; that men may be warned for the future, not to introduce into Sparta any unbecoming customs” —————]

The same story, as related in Athenæus, has this additional circumstance, that when the public executioner was on the point of fulfilling the sentence, by cutting off the new strings, Timotheus, perceiving a little statue in the same place, with a lyre in his hand, of as many strings as that which had given the offence, and shewing it to the judges, was acquitted.

Indeed the decree only informs us, that the use of a lyre, with more than seven strings, was not allowed at this time by the Lacedæmonians; but does not prove that the rest of Greece had confined their music within the compass of seven notes; nor, consequently, ascertain how many of the eleven strings were additions peculiar to Timotheus. That the outcry against the novelties of this musician was, however, not confined to Sparta, appears from a passage in Plutarch's Dialogue, where he gives a list of the innovators, who had corrupted and enervated the good old melody, by additional notes both upon the Flute and Lyre (b).

“Lafus of Hermione, says he, by changing musical Rhythms to the Dithyrambic irregularity of movement, and, at the same

(a) This part of the original is very corrupt: the meaning, however, appears to be, that in a contest at the Carnean festival, he had sung a poem upon the labour of Semele, at the birth of Bacchus, in which he had not sufficiently attended to decency and decorum.

(b) Plutarch accuses Lafus of imitating the many sounds, the πολυφωνία of Flutes. And Plato, in his *Rep. Lib. iii.* inveighing against instruments of many strings, calls them imitators of the Flute: αὐλῆς μιμηματα; and in his third book, *De Leg.* he complains of the Lyre imitating the Flute.
time

time, emulating the compass and variety of the Flute, occasioned a great revolution in the ancient music. Melanippides, who succeeded him, in like manner, would not confine himself to the old music, any more than his scholar Philoxenus, or Timotheus."

The same thing also appears from the bitter invectives to which the comic poets at Athens, especially Pherecrates and Aristophanes, gave a loose; not, perhaps, from understanding music, or being at all sensible of its effects, but from that envy, which the great reputation of the musician had excited. An exalted character is a shooting-butt, at which satirists, and wicked wits, constantly point their arrows; and the stage at all times wages war against whatever calls off the public attention from itself.

The abuse, therefore, of this musician, which abounds in ancient authors, is, perhaps, as great a proof of his superiority, as the praise. A Greek epigram, preserved in Macrobius, informs us, that the Ephesians gave him a thousand pieces of gold for composing a poem in honour of Diana, at the dedication of the temple of that Goddess; and was not that a sufficient reason for *hungry* authors to rail?

Plutarch tells us, that the comic poet Pherecrates introduced *Music* on the stage, under the figure of a woman, whose body was terribly torn and mangled. She is asked by *Justice*, under the figure of another woman, the cause of her ill-treatment? when she relates her story in the following words: "The first source of all my misfortunes was Melanippides, who began to enervate and debilitate me by his *twelve strings*. However, this would not have reduced me to the deplorable condition in which I now appear, if Cinesias, that cursed Athenian, had not contributed to ruin and disfigure me in his Dithyrambic Strophes, by his false and untuneable inflexions of voice. In short, his cruelty to me was beyond all description; and next to him, Phrynis took it into his head to abuse me by such di-

visions and flourishes, as no one ever thought of before, making me subservient to all his whims, twisting and twirling me a thousand ways, in order to produce from *five strings*, the *twelve* different *modes* (c). But still, the freaks of such a man would not have been sufficient to complete my ruin; for he was able to make me some amends. Nothing now was wanting but the cruelty of one Timotheus to send me to the grave, after maiming and mangling me in the most inhuman manner.”

“Who is this Timotheus?” says Justice.

MUSIC.

“O ’tis that vile Milesian blade,
Who treats me like an arrant jade;
Robs me of all my former fame,
And loads me with contempt and shame:
Contriving still, where’er he goes,
New ways to multiply my woes:
Nay more, the wretch I never meet,
Be it in palace, house, or street,
But strait he strips off all my things,
And ties me with a *dozen strings* (d).”

(c) This passage seems manifestly to imply an instrument with a *neck*, by which the sounds of *five strings* only, were multiplied to those of all the twelve modes; and this was, probably, the first attempt of the kind in Greece; at least it is the first that I have seen upon record.

(d) This is a fragment from a comedy written by Pherecrates, called Chiron, and the only remains of that poet; and as Timotheus is accused by him of multiplying the strings of the lyre to *twelve*, as that instrument had *ten* before his time, it is

probable that the two sounds he added were B $\sharp$ for the *Chromatic Genus* which he stands accused, by the *Senatus-Consultum*, of having introduced at Sparta; and the *Nete Diezeugmenon*, or sound E, upon the first line in the treble, which, though supposed to have been added to the Scale by Pythagoras, may, perhaps, never have been heard by the Spartans, before the arrival of Timotheus among them. If this conjecture be right, his Scale must have been the following:

It appears from the above fragment, that Timotheus was not the first who used *eleven* strings, since the Lyre of Melanippides was furnished with *twelve*, before his time.

There were two Poet-musicians of the name of Melanippides, both anterior to the *elder* Timotheus.

It has already been remarked, that the word *Enharmonic* appears in the copy of the *Senatus-Consultum*, inserted in the Oxford Edition of Aratus, though no notice is taken of it by some translators. It is likewise to be found, not only in the copy of this decree, which Casaubon has given in his notes upon Athenæus, but in a beautiful MS. of the eleventh century, in the British Museum (e). If then it is certain that the Lacedæmonians admired the Enharmonic Genus for its *simpli-*
city, and yet reprobated the Chromatic for its *difficulty* and effeminacy, does it not fortify the hypothesis hazarded in the Dissertation, concerning the plainness and dignity of the ancient Enharmonic?

It appears from Suidas, that the poetical and musical compositions of Timotheus were very numerous, and of various kinds. He attributes to him nineteen *Nomes*, or Canticles, in *Hexameters*; thirty-six *Proems*, or Preludes; eighteen *Dithyrambics*; twenty-one *Hymns*; the poem in praise of Diana; one Panegyric; three Tragedies, the *Persians*, *Phinidas*, and *Laertes*; to which must be added a fourth, mentioned by several ancient authors, called *Niobe*, without forgetting the poem on *the birth of Bacchus*. Stephen of Byzantium makes him author of eighteen books of *Nomes*, or airs, for the *Cithara*, to eight thousand verses, and of a thousand *Προοίμια*, or *Preludes*, for the *Nomes* of the Flute.

Timotheus died in Macedonia, according to Suidas, at the age of ninety-seven; though the Marbles, much better authority, say at ninety; and Stephen of Byzantium fixes his death in the fourth year of the 105th Olympiad, two years before the birth of Alexander the Great; whence it appears, that this Timotheus was not the famous player on the Flute, so much esteemed by that prince, who was animated to such a degree by his performance, as to seize his arms; and who employed him, as Athenæus informs us (f), together with the other

(e) *Bib. Reg.* 15 B. IX.

(f) *Lib.* xii. p. 538.

great musicians of his time, at his nuptials. However, by an inattention to dates, and by forgetting that of these two musicians of the same name, the one was a Milesian, and the other a Theban (*g*), they have been hitherto almost always confounded.

Of the Isthmian Games.

These Games were so called from the Isthmus of Corinth, where they were celebrated. In their first institution, according to Pausanias (*h*), they consisted only of funeral rites and ceremonies, in honour of Melicertes; but Theseus afterwards, as Plutarch informs us (*i*), in emulation of Hercules, who had appointed Games at Olympia, in honour of Jupiter, dedicated these to Neptune, his reputed father, who was regarded as the particular protector of the Isthmus, and commerce, of Corinth. The same trials of skill were exhibited here, as at the other three Sacred Games, and particularly those of Music and Poetry (*k*).

Livy relates a very interesting event, which happened during the celebration of these Games, after the Romans had defeated Philip king of Macedon, one of the successors of Alexander the Great, who had been in possession of the chief part of Greece.

The time, says this author, for celebrating the Isthmian Games was now come. There was always a great concourse of people at them, from the natural curiosity of the Greeks, who delighted in seeing all kinds of combats and bodily exercises, as well as from the convenience of the situation, between two seas, for the inhabitants of different provinces to assemble. But being at this time anxious to know their own fate, and that of their country, all Greece flocked thither, the greater part silently foreboding the worst, and some not scrupling

openly to express their fears. At length the Romans took their places at the Games, and a herald, with a trumpet, in the usual manner, advanced into the middle of the Arena, as if to pronounce the common form of words; but, when silence was ordered, he proclaimed, "that the Roman senate and people, and T. Quinctius Flamininus their general, after vanquishing Philip and his Macedonians, declared the Corinthians, Phocæans, all the Locrians, the island Eubœa, the Magnesians, Theſſalonians, Perrhæbi, Achæans, and Phthiotes, all which states had been possessed by Philip, free, independent, and subject only to their own laws." The joy which this proclamation occasioned in the assembly was, at first, too great to be comprehended. The spectators could scarce credit what they heard; they regarded each other with astonishment, as if they had waked out of a dream. Each, diffident of his own ears, with respect to what particularly concerned himself and his own country, asked his neighbour what had been said. The herald was even called again, so strong a desire did each express, not only to hear, but to see the messenger of their liberty, and they had the satisfaction of hearing him repeat the decree. When their joy was fully confirmed, they expressed it in such loud and reiterated shouts of applause, that it was evident liberty was dearer to them than all the other advantages of life (l). After this the Games were celebrated, but with the greatest hurry and confusion; no one had eyes or attention for the spectacle; every avenue of inferior pleasure was absorbed by joy (m).

These Games, in which the victors were only rewarded with garlands of pine-leaves, were celebrated with great magnificence and splendour, as long as paganism continued to be the established religion of Greece; nor were they omitted even when Corinth was sacked and burned by Mummius, the Ro-

(l) *Plut. Vit. Flamin.* says, the shouts were so loud, that some crows which happened to be flying over their heads, fell

dead into the Stadium.

(m) *Dec. 4. lib. xxxiii. cap. 32.*

man general, at which time the care of them was transferred to the Sicyonians, but was restored again to the inhabitants of Corinth, when that city was rebuilt.

Though every Grecian Province had its peculiar Games, and every great city its festivals, in many of which Poets and Musicians contended for pre-eminence; yet, after bestowing so many pages upon the four *Sacred Games*, I should extend my enquiries concerning these institutions no farther, if a celebrated establishment of this kind, among the Athenians, the most elegant, refined, ingenious, and voluptuous people of Greece, did not, from the frequent mention that is made of it in ancient authors, and the renown of the combatants, seem to require particular notice.

Of the Panathenæan Games.

There were two solemn festivals under this denomination at Athens, the greater and the less; both of which were celebrated there in honour of Minerva, the patroness of that city. They must have been of very high antiquity, as their first institution was ascribed to Orpheus (*n*), and to king Erichthonius (*o*); and their renewal and augmentation to Theseus (*p*). The greater *Panathenæa* were exhibited every five years, the less every three, or, according to some writers, annually (*q*). Though the celebration of neither, at first, employed more than one day, yet in after-times they were protracted for the space of many days, and solemnized with greater preparations and magnificence than at their first institution.

Prizes were established there for three different kinds of combat: the first consisted of Foot and Horse-races; the second, of Athletic exercises; and the third, of Poetical and Musical

contests.

contests. These last are said to have been instituted by Pericles: and that great patron of arts and literature may have been the first who excited emulation in Poets and Musicians, at this festival, by bestowing rewards upon the most excellent; but, according to Plutarch (r), who had consulted the Panathenæan Register, Musical Performances were of much earlier date there than the time of Pericles. Rhapsodists were appointed to sing the verses of Homer at these Games, by Hipparchus, the son of Pisistratus.

Singers of the first class, accompanied by performers on the Flute and Cithara, exercised their talents here, upon subjects prescribed by the directors of these exhibitions. And while the Athenian state was free and independent, the noble and generous actions of Harmodius and Aristogiton, who had opposed the power of the Pisistratidæ, and of Aristobulus, who had delivered the Athenians from the oppression of the thirty tyrants, imposed upon them by the Lacedæmonians, were celebrated in these songs.

The first who obtained the prize here, on the Cithara, according to the Marbles, was Phrynis, of Mitylene, about 457 years B. C. But this Musician was not equally successful when he contended in these Games with Timotheus, who boasts, himself, in some verses preserved by Plutarch (s), of a victory he had obtained over him.

There were premiums likewise given to players on the Flute, an instrument long in the highest esteem throughout all Greece, but in particular request at Athens; perhaps from the legendary account of its invention by Minerva, the protectress of that city. Though the pagan religion seems to have had but little effect in restraining vice, and held out but few allurements to virtue, yet it furnished its votaries with reasons for innumerable follies.

(r) *De Musica,*

(s) *De Laud. Sui.*

Aristotle (*t*) tells us, that the Flute, after its first invention, was used by mean people, and thought an ignoble instrument, unworthy of a free man, till after the invasion and defeat of the Persians (*u*); when ease, affluence, and luxury soon rendered its use so common, that it was a disgrace to a person of birth not to know how to play upon it. Callias and Critias, celebrated Athenians, Archytas of Tarentum, Philolaüs, and Epaminondas, were able performers on the Flute. Indeed Music, in general, was in such favour, and the study of it was thought so essential a part of education, at Athens, in the time of Pericles and Socrates, that Plato (*x*) and Plutarch (*y*) have thought it necessary to inform us of whom those two great personages received instructions in that art. DAMON, the Athenian, was the music master of both. The philosopher calls him his friend, in a Dialogue of Plato, where Nicias, one of the interlocutors, informs the company, that Socrates had recommended, as a music master to his son, Damon, the disciple of Agathocles, who not only excelled in his own profession, but possessed every quality that could be wished in a man to whom the care of youth was to be confided (*z*).

Damon had chiefly cultivated that part of Music, which concerns *Time* or *Cadence*. For which he is highly commended by Plato (*a*), who seems to have regarded *Rhythm* as the most essential part of Music, and that upon which the morals of a people depended, more than upon Melody, or, as the ancients called it, *Harmony*. He is also mentioned by Aristides Quintilianus, as having excelled in characterizing his Melodies, by

(*t*) *De Repub.* cap. vi.

(*u*) Strabo says, it was the general opinion, that the Greeks had the chief part of their Music, and Musical Instruments, from Asia and Thrace. And according to Athenæus, *lib.* xiii. *p.* 607, Music was thought a necessary female accomplishment in the time of Darius; for this author tells us, that Parmenio wrote Alex-

ander word, that he had taken at Damascus three hundred and twenty-nine of the Persian monarch's concubines, who were all skilled in Music, and performers on the Flute, and other instruments.

a judicious choice of such sounds and intervals as were best adapted to the effects he intended to produce (*b*).

Pericles, the most accomplished character in antiquity, was not only a consummate judge, but a great encourager of all the arts. And in his life, written by Plutarch, we are told that the Muses bore a principal share in all the public spectacles with which he entertained the people. He not only regulated and augmented the Poetical and Musical contests at the Panathenæan festivals, but built the *Odeum* (*c*), or Music-Room, in which Poets and Musicians daily exercised themselves in their art, and rehearsed new compositions, before they were exhibited in the theatre.

It was Pericles, likewise, who invited to Athens ANTIGENIDES, one of the most renowned Musicians of antiquity; of whose life and talents such honourable mention is made in ancient authors, that it seems necessary to give the reader some account of them. According to Suidas, he was a native of Thebes, in Bæotia, and the son of Satyrus, a celebrated Flute-player, who, as Ælian tells us, was so charmed with the lectures of the philosopher Ariston, that upon quitting them, he said, "If I do not break my Flute, I hope I shall have my head cut off." Antigenides was not the only one of his country whose abilities upon that instrument had rendered him famous. The Thebans in general piqued themselves much upon being great performers on the Flute. This is manifest from a passage in Dion Chrysostom. "The pre-eminence, says he, which all Greece unanimously allows to the Thebans, in this particular, has been constantly regarded by them as a point of great importance, of which I shall give an instance. After the total ruin of their city, which has never yet been rebuilt,

(*b*) Damon, according to Plutarch, was a profound politician, and, under the mask of a Musician, he tried to conceal from the multitude this talent. He was, however, involved with his patron Pericles, in the

political disputes of his time, and banished, as a favourer of tyranny. The period when he flourished, may be gathered from his connections.

(*c*) Plut. in *Pericl.*

no part of it being now inhabited but the small quarter, called *Cadmea*, they gave themselves but little trouble in restoring any of the public monuments that had been thrown down or destroyed, one statue only of Mercury excepted, which they took great pains to dig out from among the rubbish, and to erect again, on account of the following inscription: Ἑλλὰς μὲν Θηβὰς νικᾶν προέκρινεν αὐλοῖς.—*Greece has declared that Thebes wins the prize upon the Flute.* So that this statue is still standing in the old public square, among the ruins (*d*).”

Pronomus, mentioned already (*e*), as the inventor of a Flute, upon which he could play in three different Modes, was a Theban. Before his time, there was a particular Flute for every Mode or Key: and so *out of tune* are the generality of modern Flutes, it were almost to be wished that the custom had still continued. The words and Music of a Hymn, composed by Pronomus for the inhabitants of Chalcis, when they went to Delos, were subsisting in the time of Pausanias, as was likewise the statue of this Musician, erected by the citizens of Thebes, near that of Epaminondas (*f*).

Antigenides being, therefore, originally an inhabitant of a city in which the Flute was held in such honour, and the son of a person who had distinguished himself upon it, was the more likely to become eminent in the same art; and he is said to have brought it to greater perfection than any one of his time, by the lessons he received from PHILOXENUS. This celebrated Poet-Musician, was a native of Cythera, and author of a great number of Lyric poems, which are entirely lost. His innovations in Music are stigmatized by Plutarch, and the comic Poets of his own time. He was so great an epicure, that he is said to have wished for a throat as long as that of a crane, and *all palate*, in order to prolong the relish of the delicious morsels he swallowed. He was, however, as much cele-

(*d*) *Orat.* 7. p. 123. *Edit. Paris.*

(*e*) P. 64.

(*f*) *Pausan.* in *Bæotic.* cap. xii.

brated for his jests as his gluttony. Being served with a small fish, at the table of Dionysius of Syracuse, and seeing an enormous turbot placed before the tyrant, he put the head of the little fish close to his mouth, and pretended to whisper it: then placed it close to his ear, as if to receive the answer more distinctly. Upon being asked by Dionysius for an explanation of this mummary, he said, "I am writing a poem, Sir, upon Galatea, one of the Nereids; and as I want information concerning several particulars relative to her father Nereus, and the watry element, that are quite out of my ken, I was in hopes of obtaining some satisfaction from this fish; but he tells me, that he is too young and ignorant to be able to satisfy my curiosity, and refers me to that grown-gentleman before your majesty, who is much better acquainted with aquatic affairs." The tyrant understood him, and had the complaisance to send the turbot (g). But though, from this instance, he appears to have been high in favour with Dionysius, he afterwards proved so awkward a courtier, that he preferred the labour of carrying stones from a quarry, to the disgust of praising the bad verses of his patron.

Antigenides was, in his youth, according to Suidas, Flute-player in ordinary (h) to Philoxenus, and accompanied him in the musical airs which he had set to his own verses. Instructed by such a master, it was no wonder that he should have, in his turn, disciples of the first class himself, and be carested by the greatest princes. Pericles, who had undertaken the education of his nephew Alcibiades, appointed Antigenides for his Flute-master. But Aulus Gellius relates, from the History of Music, in thirty Books, by Pamphila, that

(g) It was of this glutton, that Machon, the comic Poet, cited by Athenæus, told the story which has furnished la Fontaine with a subject for one of his tales, and Pope with a *point*, at the end of one of his characters.

A salmon's belly, Helluo, was thy fate;
The doctor call'd, declares all help too late:
"Mercy! cries Helluo, mercy on my soul!
Is there no hope?—Alas—then bring the
jowl." Ep. I.

(h) *Αυλῶδης*.

his scholar Alcibiades setting up for a fine gentleman, and taking the utmost care of his person, was soon disgusted with his instrument, as Minerva herself had been before; for happening to see himself in a mirror, while he was playing, he was so shocked at the distortion of his sweet countenance, that he broke his Flute, in a transport of passion, and threw it away, which brought this instrument into great disgrace among the young people of rank at Athens. However, this disgust did not extend to the sound of the Flute itself, since we find by Plutarch, that the great performers upon it continued long after to be much followed and admired (*i*).

It was Antigenides, according to Athenæus (*k*), who played upon the Flute at the nuptials of Iphicrates, when that Athenian general espoused the daughter of Cotys, king of Thrace: and Plutarch attributes to him the transporting Alexander to such a degree, by his performance of the *Harmatian Air*, at a banquet, that he seized his arms, and was on the point of attacking his guests. The same story has been told of Timotheus. The Lacedæmonians had a song which said, that "*a good performer on the Flute would make a man brave every danger, and face even iron itself.*"

Notwithstanding this Musician was so high in reputation, he seemed to regard public favour as a precarious possession, and was never elated by the applause of the multitude. He endeavoured to inspire his disciples with the same sentiments; and in order to console one of them, who, though possessed of great abilities, had received but little applause from his au-

(*i*) Aristotle, after speaking of the introduction and progress of the Flute in Greece, and of its universal use, gives a different reason for its being less in repute during his own time, than formerly. "The Flute is now, says he, regarded as unfit for young gentlemen, because not a *moral instrument*, adapted to enthusiastic, and passionate Music, such as is proper for the sober purposes of education."

Perhaps by *moral*, he meant such an instrument as the Lyre, to which Poetry and morality could be united by the person who performed upon it. But if we reflect upon the influence of fashion, and the vanity of imitating the great, the cause assigned by A. Gellius for the disgrace of the Flute, is more likely to have been the true one, than that given by Aristotle.

(*k*) *Lib. iv.*

dience,

dience, "the next time you play, says he, shall be *to me and the Muses* (l)." Antigenides was so fully persuaded of the coarse taste of the common people, that one day, hearing at a distance a violent burst of applause, to a player on the Flute, he said, "there must be something very bad in that man's performance, or those people would not be so lavish of their approbation."

Antigenides was author of many novelties upon the Flute. He encreased the number of holes, which extended the compass of the instrument, and, probably, rendered its Tones more flexible, and capable of greater variety. Theophrastus, in his History of Plants, has recorded how and at what season, Antigenides cut the reeds for his Flute, differently from former players on that instrument, in order to have such as would express all the delicacy and refinements of his new Music; and Pliny has translated the passage (m).

This Musician had great occasion for flutes, upon which he could easily express minute intervals and inflexions of sound, since, according to Apuleius, he played upon them in all the modes: upon the Æolian and Ionian, remarkable the one for simplicity, the other for variety; upon the plaintive Lydian; upon the Phrygian, consecrated to religious ceremonies; and upon the Dorian, suitable to warriors (n).

The innovations of Antigenides were not confined to the flute only: they extended to the robe of the performer; and he was the first who appeared in public with delicate Milesian slippers, and a robe of saffron-colour, called *crocoton* (o). Plutarch has preserved a *bon mot* of Epaminondas, relative to Antigenides. This general, upon being informed, in order to alarm him, that the Athenians had sent troops into the Pello-

ponnefus,

ponnefus, equipped with entire new arms; asked "whether Antigenides was disturbed when he saw new flutes in the hands of Tellis?" who was a bad performer.

DORION is mentioned by Plutarch as a Flute-player who had made feveral changes in the Mufic of his time, and who was head of a feét of performers, that militated againft another feét of practical muficians, of which Antigenides was the chief; a proof that thefe two mafters were cotemporaries and rivals (*o*). Dorion, though much celebrated as a great Mufician, and Poet, by Athenæus, is better known to pofterity as a voluptuary. Both his Mufic and Poetry are loft, however, many of his pleafantries are preferved. Being at Milo, a city of Egypt, and not able to procure a lodging, he enquired of a prieft who was facrificing in a chapel, to what divinity it was dedicated, who answered, *to Jupiter and to Neptune*. How fhould I be able, fays Dorion, to get a lodging in a place where the Gods are forced to lie double? Supping one night with Nicocreon, in the ifland of Cyprus, and admiring a rich gold cup that was placed on the fide-board, the goldfmith will make you juft fuch another, fays the prince, whenever you please; "he'll obey your orders much better than mine, fir, fays Dorion; fo let me have that, and do you befpeak another." The remark of Athenæus (*p*) upon this reply is, that Dorion acted againft the proverb, which fays, that

To Flute-players, nature gave brains there's no doubt,
But alas! 'tis in vain, for they foon blow them out (*q*).

(*o*) It appears, from a paffage in Xenophon, *Memor.* iv. 4. that it was no uncommon thing for the Athenians to be divided into, what we fhould call, *Fiddling Factions*. Socrates, difcourfing upon the advantages of concord in a ftate, fays, "by concord, I mean that the city fhould agree, not in chufing the fame Poet, or

praising the fame Flute-player, but in obeying the fame laws.

(*p*) *Lib.* viii. *p.* 338.

(*q*) Ἄνδρι μὲν αὐλῆσιν θεοὶ φούρῃς εἰσέβηφουσιν:
ἀλλ' ἀμα τῷ φούσαν ἥ ὧ νοός ἐκπέταται.
Most of the eminent Flute-players were Beotians: *Crasso in aere nati*; which feems to have given rife to this epigram.

Upon

Upon hearing the description of a tempest, in the *Nauplius* of Timotheus, Dorion said, he had seen a better in a boiling cauldron.

Having lost a large shoe at a banquet (*r*), which he wore on account of his foot being violently swelled by the gout, "the only harm I wish the thief, said he, is, that my shoe may fit him."

His wit and talents made amends for his gluttony, and he was a welcome guest wherever he went. Philip of Macedon, in order to enliven his parties of pleasure, used frequently to invite him with Aristonicus the *citharist*.

How great a demand there was at this time for Flutes, at Athens, may be conceived from a circumstance mentioned by Plutarch, in his Life of Isocrates. This orator, says he, was the son of Theodorus, a Flute-maker, who acquired wealth sufficient by his employment not only to educate his children in a liberal way, but also to bear one of the heaviest public burdens to which an Athenian citizen was liable; that of furnishing a *Choir*, or *Chorus* for his tribe, or ward, at festivals and religious ceremonies (*s*).

The wealth of Theodorus will not, however, appear very extraordinary, if we judge of the price of Flutes by that of ISMENIAS, the celebrated Musician of Thebes; who, according to Lucian (*t*), gave three talents, or 581 *l.* 5 *s.* for a Flute, at Corinth. But this celebrated Musician was as eminent for his extravagance, as for his genius. He is recorded

(*r*) This would be a strange accident, indeed, at a modern feast; but was not extraordinary when it was the custom to eat in a reclining posture, and when all the guests pulled off their shoes, that the couches might not be dirtied.

(*s*) Each tribe furnished their distinct *Chorus*; which consisted of a band of vocal and instrumental performers, and dancers, who were to be hired, maintained, and dressed, during the whole time of the festival: an expence considerable in itself,

but much encreased by emulation among the richer citizens, and the disgrace consequent to an inferior exhibition. The fluctuations of trade and public favour, have rendered the business of boring Flutes far less profitable at present, than it was in the time of Theodorus; but then we have, in our own country, a Harpsichord-maker, as able to *maintain a Choir*, as the dean and chapter of any cathedral in England.

(*t*) *Ad indoctum.*

by Pliny (*u*), as a prodigal purchaser of jewels, which he displayed with great vanity; and was once very angry that an emerald had been bought, in Cyprus, for less than he thought the value of it, though purchased for himself; and said to the person to whom he had given the commission, "You have done your business like a fool, and disgraced the gem." Plutarch (*x*) relates the following story of him: being sent for to accompany a sacrifice, and having played some time without the appearance of any good omen in the victim, his employer became impatient, and, snatching the Flute out of his hand, began playing in a very ridiculous manner, himself, for which he was reprimanded by the company; but the happy omen soon appearing: there! said he; to play acceptably to the Gods, is their own gift! Ismenias answered with a smile, "While I played, the Gods were so delighted, that they deferred the omen, in order to hear me the longer; but they were glad to get rid of your noise, upon any terms." Thus we see that neither vanity nor impiety are peculiar to modern Musicians.

Indeed, according to Xenophon, the Flute-players of these times must have lived in a very splendid and magnificent manner. "If, says he (*y*), a bad performer on the Flute wishes to pass for a good one, how must he set about it? Why he must imitate the great Flute-players in all those circumstances that are extraneous to the art itself. And, principally, as they are remarkable for expending great sums in *rich furniture*, and for appearing in public with a *great retinue of servants*, he must do the same."

With respect to the salaries of great public performers, a circumstance mentioned by Dr. Arbuthnot (*z*), from Athenæus, shews that the profusion and extravagance of the present age

(*u*) *Lib.* xxxvii. 1.

(*x*) *Sympos. lib.* ii. q. 1.

(*y*) *Memor. Socrat.*

(*z*) Tables of ancient coins, weights, and measures, p. 199.

in gratifying the ministers of our pleasures, is not equal to that of the Athenians during the times of which I write. For it is asserted that Amæbæus the Harper, whenever he sung on the stage, was paid an Attic talent, or 193*l.* 15*s.* a day for his performance; though he lived, it is added, close by the theatre (a).

The importance of the Flute is manifested by several inscriptions upon ancient marbles, given in Montfaucon, where it appears that the sacrificial Tibicen, at Athens, was always chosen, and his name recorded, with the officers of state (b). This Musician was called *Auletes*, and, sometimes *Spondaules*. His office was to play on the Flute, close to the ear of the priest, during sacrifice, some pious air, suitable to the service, in order to keep off distraction and inattention during the exercise of his function (c). Indeed there is no representation of a sacrifice, procession, banquet, or festive assembly, either in ancient Painting, or Sculpture, without a Musician. And the attendance of *Flute-players* at sacrifices was so common in Greece, that it gave rise to a proverb which was usually applied to such as lived at the tables of others: *you live the life of a Flute-player* (d). Because, as Suidas says, these performers being constantly employed at sacrifices, where the victims furnished them with a dinner, were at little or no expence in house-keeping.

The list of illustrious Flute-players in antiquity is too numerous to allow a separate article to each. However, a few, besides those already mentioned, still hold their heads above

(a) Roscius could gain only five hundred *sestertia*, or 4036*l.* 9*s.* 2*d.* a year: and when he acted by the day, but four thousand *nummi*, or 32*l.* 5*s.* 10*d.*

(b) *Suppl.* tom. ii. p. 186.

(c) A similar custom is still preserved in the Greek church. "For, while the priest stands with his face towards the east, and repeats the prayers, the choir is almost constantly singing hymns,

and he reads in so low a voice, for the most part, that the congregation is not supposed to pray themselves, or to hear the prayers he offers up on their behalf." *Rites and Cerem. of the Greek Church*, by Dr. John Glen King, p. 46. Perhaps too, the musical performance in the churches of Italy, during the *Musitandi*, or *Messa-bassa*, had the same origin.

(d) *Αυλητὴ βίον ζῇ.* *Suid.* πρὸς Αὐλητῆς.

the crowd, and seem to demand attention. And among these, as a particular respect seems due to *Inventors*, who, by genius or study, have extended the limits of theoretical or practical Music, *Clonas* must not be passed by unnoticed.

Plutarch (*e*), the only author by whom he is mentioned, tells us, that *Clonas* lived soon after the time of *Terpander*, and was the first who composed *Nomes for the Flute*, of which he specifies three that were much celebrated in antiquity, under the names of *Apothetos*, *Schænon*, and *Trimeres*. These were, probably, tunes for the Flute *alone*, without the voice; for both Plutarch and the Marbles tell us, that there were *Nomes* in the time of *Terpander*, which he sung to the accompaniment of the Flute and Cithara (*f*).

Polymnestes, of Colophon in Ionia, was a composer for the Flute, as well as an improver of the Lyre; and it appears to have been no uncommon accomplishment for these ancient Musicians to perform equally well upon both those instruments. *Polymnestes* is said to have invented the *Hypolydian Mode*. This Mode being half a Tone *below* the Dorian, which was the lowest of the five original Modes (*g*), was, perhaps, the first extension of the scales *downwards*, as the Mixolydian was, *upwards*. Plutarch, who assigns to him this invention, says, that he *relaxed* and *tightened* the strings more than had been done before; that is, altered their tension, by new tunings, relaxing them for his new Mode; and, on the contrary, when he played in the old Modes, tightening them again (*h*).

Telepahanès was a celebrated performer on the Flute in the time of Philip of Macedon. According to Pausanias he was

(*e*) *De Musica*.

(*f*) See p. 367.

(*g*) See p. 48.

(*h*) M. Burette, *Mém. de Litt.* tom. xv. has expended much learning upon the words *ελάττωσις* and *εξέτασις* to very little purpose, if they mean simply *relaxation* and *tension*, as the passage in Plutarch seems to imply.

He has likewise, in his long note upon this passage, changed the place of all the Modes, without giving a reason for it, by making the Dorian Mode correspond with E natural, instead of D; so that the Lydian, which this author has himself frequently told his readers was F $\sharp$, is now mounted up to G $\sharp$.

a native of Samos, and had a tomb erected to him by Cleopatra, the sister of Philip, in the road between Megara and Corinth, which was still subsisting in his time (*i*). Telephanes was closely united in friendship with Demosthenes, who has made honourable mention of him in his harangue against Midias, from whom he had received a blow, in public, during the celebration of the feast of Bacchus. As this was a kind of musical quarrel, I shall relate the cause of it.

Demosthenes having been appointed by his tribe to furnish a Chorus (*k*), to dispute the prize at this festival; and as this Chorus was to be instructed by a master (*l*), Midias, in order to disgrace Demosthenes, bribed the music master to neglect his function, in order that the Chorus might be unable to perform their several parts properly before the public, for want of the necessary teaching and rehearsals. But Telephanes, who had discovered the design of Midias, not only chastised and dismissed the music-master, but undertook to instruct the Chorus himself.

After speaking of so many Flute-players of the male sex, it is but justice to say that they did not monopolize the whole glory arising from the cultivation of that instrument; as the performing upon it was ranked, in high antiquity, among female accomplishments. Its invention was ascribed by the Poets to a Goddess; it was the Symbol of one of the Muses; and it was never omitted in the representation of the Sirens. However, the same reason which provoked Minerva to throw it aside, has luckily inclined modern ladies to cultivate instruments, in performing upon which, their natural charms, in-

(*i*) The Epitaph upon this Musician, which is preserved in the *Anthologia*, equals his talents to those of the greatest names in antiquity.

Orpheus, whom Gods and men admire,
Surpass'd all mortals on the Lyre:
Nestor with eloquence could charm,
And pride, and insolence disarm:

Great *Homer*, with his heav'nly strain,
Could soften rocks, and quiet pain:---
Here lies *Telephanes*, whose Flute
Had equal pow'r o'er man and brute.

(*l*) *Διδασκαλος*.

stead of being diminished, are but rendered still more irresistible.

The most celebrated female Flute-player in antiquity, was LAMIA; her beauty, wit, and abilities in her profession, made her regarded as a prodigy. The honours she received, which are recorded by several authors, particularly by Plutarch and Athenæus, are sufficient testimonies of her great power over the passions of her hearers. Her claim to admiration from her personal allurements, does not entirely depend, at present, upon the fidelity of historians; since an exquisite engraving of her head, upon an Amethyst, with the veil and bandage of her profession, is preserved in the king of France's collection, which, in some measure, authenticates the accounts of her beauty.

As she was a great traveller, her reputation soon became very extensive. Her first journey from Athens, the place of her birth, was into Egypt, whither she was drawn by the fame of the Flute-players of that country. Her person and performance were not long unnoticed at the court of Alexandria; however, in the conflict between Ptolemy Soter, and Demetrius, for the island of Cyprus, about 312 years B. C. Ptolemy being defeated in a sea-engagement, his wives, domestics, and military stores, fell into the hands of Demetrius.

Plutarch, in his life of this prince, tells us, that "the celebrated *Lamia* was among the female captives taken in this victory. She had been universally admired, at first, on account of her talents, for she was a wonderful performer on the Flute; but, afterwards, her fortune became more splendid, by the charms of her person, which procured her many admirers of great rank." The prince, whose captive she became, and who, though a successful warrior, was said to have vanquished as many hearts, as cities, conceived so violent a passion for *Lamia*, that, from a sovereign and a conqueror, he was instantly transformed into a slave; though her beauty was now
on

on the decline, and Demetrius, the handsomest prince of his time, was much younger than herself.

At her instigation, he conferred such extraordinary benefits upon the Athenians, that they rendered him divine honours; and as an acknowledgment of the influence, which she had exercised in their favour, they dedicated a temple to her, under the name of *Venus Lamia*.

Athenæus has recorded the names of a great number of celebrated *Tibicinæ*, whose talents and beauty had captivated the hearts of many of the most illustrious personages of antiquity; and yet the use of the Flute among females seems to have been much more general in Persia than in Greece, by the account which Parmenio gives to Alexander of the female Musicians in the service of Darius.

Horace speaks of bands of female Flute-players, which he calls *Ambubaïarum Collegia* (m), and of which there were still colleges in his time (n). But the followers of this profession became so numerous and licentious, that we find their occupation prohibited in the Theodosian code; however, with little success: for Procopius tells us that in the time of Justinian, the sister of the empress Theodora, who was a *Tibicina*, appeared on the stage without any other dress than a slight scarf thrown loosely over her. And these performers were become so common in all private entertainments, as well as at public feasts, obtruding their company, and placing themselves at the table, frequently unasked, that, at the latter end of this reign, their profession was regarded as infamous, and utterly abolished.

Among the most renowned *Lyrists* and *Citharædists* of antiquity, to whom a particular article has not been allowed, many have been omitted for want of materials, as well as for want of room. *Arion* has, however, already had a place in

(m) *Ambubaïa* is said, by the commentators, to be a Syrian word, which in that

language implies a *Flute*, or the sound of a *Flute*.

(n) See p. 416.

the Dissertation (o), where the invention of *Dithyrambic Poetry* is ascribed to him. *Epigonius*, a mathematician of Sicyon, and native of Ambrocia, is celebrated by the ancients for the invention of an instrument of forty strings, which was called after his name, *Epigonium*. When he lived, is uncertain, but as it was in times of simplicity, we may suppose that these strings did not form a scale of forty different sounds, but that they were either tuned in Unisons and Octaves to each other, or accommodated to different Modes and Genera. The twelve Semitones of our three-stopt, octave-harpfichords, include thirty-six different strings. The *Magadis* of twenty strings, mentioned by Anacreon, had, probably, a series of only ten different sounds, the name of the instrument implying a series of octaves. *Magadizing* was a term used, when a boy, or a woman and a man, sung the same part (p). The *Simicum* of thirty-five strings, mentioned by Athenæus, must have been of this kind, like the arch-lute, double-harp, or double-harpfichord.

Crexus, perhaps, should have an honourable place here, being recorded by Plutarch as the author of a considerable Invention; that of *an instrumental accompaniment, under the song* (q): whereas, before, says Plutarch, the accompaniment was *note for note* (r).

Phrynis has already been mentioned (s) as the first who gained the prize on the Cithara at the Panathenæan Games. According to Suidas, he was originally king Hiero's cook; but this prince, chancing to hear him play upon the Flute, placed him under the instructions of Aristoclide, a descendant of Terpander. Phrynis may be regarded as one of the first Inno-

(o) P. 192.

(p) See p. 137.

(q) Κρησις ὑπο τὴν ᾠδὴν.

(r) Προσχορδα. As Plutarch plainly opposes this accompaniment to that which was in use before the time of Crexus, it can only be understood as a kind of

Bourdon, or *Drone-Base*, under the voice part. A sense which appears to be supported by the use of the same phrase, in a *Prob.* of Aristotle, (the 40th) where he speaks of the accompaniment, and the voice ending together.

(s) P. 415.

vators upon the Cithara in antiquity (*t*). He is said to have played in a delicate and effeminate style, which the comic Poets, Aristophanes and Pherecrates, ridiculed upon the stage. The former in his comedy of *the Clouds*, and the latter in the piece already mentioned (*u*). Plutarch, who frequently applies the same story and apophthegm to different persons, tells us (*x*), that when Phrynis offered himself as a candidate at the public Games in Sparta, he had two strings cut off his Lyre by the magistrates, in order to reduce them to the ancient number. A similar disgrace to that which had happened to Terpander before, and to which Timotheus was forced to submit soon after.

Having now given an account of the principal, and most celebrated Poet-Musicians of ancient Greece, it does not seem necessary to interrupt the history of the Musical art with more biographical articles, as too much or too little is known of all that have been omitted. For such as Anacreon, Æschylus, Sophocles, Euripides, and Theocritus, who all flourished before the total separation of Music and Poetry, though they must have been Musicians, are omitted by design, as their lives have been so frequently published in their works. And of such obscure names as Anthes, Polyides, Xenodemos, Xenocritus, Telephilla, Rhianus, Ibycus, and other Lyrics, no memorials remain that are sufficiently interesting to entitle them to a particular niche in the Delphic grove.

Between the time of Alexander the Great, and the conquest of Greece by the Romans, but few eminent Musicians are upon record. The Grecian states never enjoyed true li-

(*t*) See p. 410.

(*u*) In this piece, *Justice* gives the following account of the education of youth, in former times. "They went together to the house of the Citharædist.---Where they learned to sing hymns to the invincible Pallas, or some other Canticles, set to the simple Melody used by their ancestors.

If any one of them pretended to sing in a ridiculous manner, or to introduce such divisions and flourishes as abound at present in the *airs of Phrynis*, he was severely punished."

These flourishes are called, in the original, *δυσκολοκαμπτοι*, and *ἰωνοκαμπτοι*.

(*x*) In *Agid*.

berty and independence after the victory obtained over them at Cheronea, by Philip, the father of Alexander. The chief of these states remaining after the death of these princes, under the Macedonian yoke, till they called in the Romans to their assistance; who, under Flamininus, as already related, restored to them the shadow of liberty, which was gradually diminished by the victories and devastations of Mummius, Sylla, and other commanders, till the time of Vespasian, who reduced all Greece to a Roman province.

The result of such enquiries as I have been able to make, is, that Music was progressive in Greece, as well as Painting, Poetry, and Sculpture; though it advanced towards perfection by much slower degrees than any of the other arts. Our curiosity, however, concerning Greek Music is stimulated, and our patience is enabled to pursue its improvements through a dull detail of circumstances, by its being connected with those efforts of ancient genius, taste, and refinement in other arts, of which sufficient specimens remain to authenticate the accounts of what is lost. For if no more substantial proofs were now subsisting of the excellence of the Poetry, Eloquence, Sculpture, and Architecture of ancient Greece, than of its Music, we should, probably, be as incurious and incredulous about them, as we are, at present, concerning the Music of the Spheres.

Before I conclude this chapter, perhaps a short recapitulation of the most remarkable events in the history of this art in Greece, of which the chain has been often unavoidably broken by biographical articles, may save the reader the trouble of recollection.

It is natural to suppose that the first attempts at Music in Greece, as well as in other countries, must have been rude and simple; and that *Rhythm*, or *Time*, was attended to, before *Tone* or *Melody*. We accordingly find that instruments of percussion preceded all others, and that the *steps* in the dance, and the *feet* in Poetry, were regulated and marked with precision

cision long before sounds were sustained or refined. When these two circumstances first engaged attention, the Flute imitated, and the Lyre accompanied the voice in its inflexions of joy and sorrow. In singing poetry, as little more was at first attempted than to prolong the accents of the language, and of passion, the Flute required but few holes, and the Lyre but few strings. As the Flute was the eldest, and long the favourite instrument of the Greeks, its compass was first extended; and the Lyre was many ages confined to a Tetrachord, after the Flute had multiplied its sounds.

One of the most extraordinary circumstances in the history of this art, to modern comprehension, is, that the *Enharmonic Genus*, even with the *diesis*, or *quarter-tone*, was almost exclusively in use before the time of Aristoxenus, the cotemporary of Alexander the Great; in so much that it was customary with the old masters to give their scholars Diagrams to practise of *condensed scales*, divided into *quarter-tones*, as necessary exercises for the hand, or voice. Of these scales examples are still remaining in the writings of Aristoxenus, Euclid, and Aristides Quintilianus (y).

In the time of Aristoxenus, however, the Enharmonic was upon the decline, and the Chromatic daily encreasing in favour (z). But the most important event in the history of Music, was the establishment of *Instrumental* contests at the Pythic Games (a).

The Abbé Arnaud, in an excellent *Dissertation on the Ac-*

(y) My own astonishment, at the use of this Genus, and the execution of these Scales, in antiquity, is considerably abated by a letter which the zeal and kindness of Dr. Ruffel has lately procured me from Aleppo, in answer to some queries which he was so obliging as to send for me to that city, concerning the present state of Music in Arabia. In this letter, besides

many other curious particulars, I find that the Arabian Scale of Music is divided into *Quarter tones*; and that an Octave, which upon our keyed instruments is only divided into twelve Semi-tones, in the Arabian Scale consists of twenty-four, for all which there are particular denominations.

(z) Aristox. p. 23.

(a) See p. 382.

cents of the Greek Tongue (b), is of opinion, that the irregularities we find in the versification of the later Greek Poets, particularly the Lyric, of a redundancy, or deficiency of one or two syllables in a verse, were admitted in order to indulge the instrumental performer, who would naturally discover new measures, as his hand and instrument advanced towards perfection.

While instruments were confined to the measure of the verse, these liberties produced some variety in the Rhythm, without destroying the accent of the language; but as soon as Musicians were freed from the laws of Prosody and Metre, they multiplied the strings of the Lyre, and the holes of the Flute, introducing new movements more complicated and varied, with new intervals and uncommon modulations. Lasus, Melanippides, Timotheus, Phrynis, and some others, are mentioned by Plutarch among the first who dared to apply these licences to song. However, they could only have been suggested to them by great practice in instrumental Music, infinitely more free than vocal, in every country, be the language what it will, but especially in Greece, where the Measures and accents of the language were governed by such rigid laws.

“ I disapprove, says Aristotle, of all kinds of difficulties in the practice of instruments, and indeed in Music in general. I call artificial and difficult, such tricks as are practised at the public Games, where the Musician, instead of recollecting what is the true object of his talent, endeavours only to flatter the corrupt taste of the multitude (c).”

These were the sentiments of the learned, long after the separation of Music and Poetry, and these are the objections that still recur, and ever will recur, to those who regard Music as a slave to syllables, forgetting that it has a language of its

(b) *Mem. de Litterature*, tom. xxxii. p.

(c) *Repub. lib. viii. cap. 6.*

own with which it is able to speak to the passions, and that there are certain occasions when it may with propriety be allowed to be a free agent.

From this time Music became a distinct art; the Choruses, which till now had governed the melody of the Lyrist and Tibicen, became subordinate to both (*d*). Philosophers in vain exclaimed against these innovations, which they thought would ruin the morals of the people, who, as they are never disposed to sacrifice the pleasures of the senses to those of the understanding, heard these novelties with rapture, and encouraged the authors of them. This species of Music, therefore, soon passed from the Games to the Stage, seizing there upon the principal parts of the drama, and from being the humble companion of Poetry, becoming her sovereign.

With respect to the period of greatest perfection in the Music of Greece, it is a subject which merits some discussion.

Plato, Aristotle, Aristoxenus, and Plutarch, were for ever complaining of the corruption and degeneracy of Music. The pious Plato, indeed, regarded it as fit only for the Gods, and their celebration in religious ceremonies, or as a vehicle for religious and moral lectures in the education of youth; and with a methodistical spirit censured all such as was used in theatres, social festivity, or domestic amusement: but modern divines might, with equal propriety, declaim against the profane use of bread as an aliment, because it is administered in the most solemn rite of our religion. A line should certainly be drawn between the Music of the church and of the theatre; but totally to silence all musical sound, except upon solemn occasions, seems to border upon downright fanaticism.

(*d*) Athenæus has preserved a little poem by Pratinas, of the *Hyporchema* kind, where he gives vent to his indignation, on account of some theatrical performance, in which, instead of the *Tibicines* accompanying the Chorus, the Chorus

had accompanied the Tibicines; *τὴς αὐλητῆς μὴ συναυδεῖν τοῖς χοροῖς-- ἀλλὰ τῆς χορῆς συναυδεῖν τοῖς αὐληταῖς*: literally, "The Flute-players did not *play* to the Chorus, but the Chorus *sung* to the Flute-players."

With respect to perfection and depravity, there is nothing so common among musical disputants, as for the favourers of one sect to call that *Degeneracy*, which those of another call *Refinement*. But Plato seems to have been always too fond of ideal excellence in every thing, to be satisfied with any other (*e*).

It has been said by many writers, both ancient and modern, that Plato was deeply skilled in the Music of his time; but it does not appear that his claims to skill in this art extend further than to mere *Theory*, or very little more. Plutarch, indeed, in his Dialogue, *proves* his profound musical science; but how? By a long passage from his *Timæus*, in which he applies musical ratios to the soul (*f*)!

However this may have been, it is difficult to refrain from numbering this philosopher, together with Aristotle, Aristoxenus, and Plutarch, though such illustrious characters, and, in other particulars, such excellent writers, among the musical Grumblers and *Croakers* of antiquity. They all equally lament the loss of good Music, without considering that every age had, probably, done the same, whether right or wrong, from the beginning of the world; always throwing musical perfection into times remote from their own, as a thing never to

(*e*) His complaints of the degeneracy of Music, may be seen in his third Book of *Laws*. The Poets, indeed, never fail to charge the corruption of Music upon its professors, yet Plato throws the blame upon the Poets themselves. "The Music of our forefathers, says he, was divided into certain species and figures. Prayers to the Gods were one species of song, to which they gave the name of Hymns: opposed to this was another species, which, in particular, might be called Threni; another, Pæones; and another, the birth of Dionysius, which I hold to be the Dithyrambus: there were also Citharædic Nomi, so called, as being still another song. These, and some others,

being prescribed, it was not allowable to use one species of Melos for another. But, in process of time, the Poets first introduced an unlearned licence, being poetic by nature, but unskilled in the rules of the science, trampling upon its laws, over attentive to please, mixing the Threni with the Hymns, and the Pæones with the Dithyrambi, imitating the Music of the Flute upon the Cithara, and confounding all things with all." Plat. *de Legibus*, as translated by Sir F. H. E. Stiles.

(*f*) What connection is there between Dr. Smith's *Harmonics*, and his taste and knowledge in *Practical Music*?

be known but by tradition. The golden age had not its name from those who lived in it.

Aristotle, indeed, complains of degeneracy in a more liberal way: "Every kind of Music, says he, is good for some purpose or other; that of the theatres is necessary for the amusement of the mob; the theatrical transitions, and the *tawdry and glaring melodies* (g) in use there, are suited to the perversion of their minds and manners, and let them enjoy them."

The complaints of Aristoxenus are more natural than those of Plato and Aristotle; for he was not only less a Philosopher, but more a Musician; and, as a professor, and an author on the subject of Music, he must have had rivals to write down. Hesiod says, that bards hate bards, and beggars beggars (h). And it has been the practice for writers on Music, in all ages, to treat their cotemporaries with severity and contempt. Gaspar Printz (i) inserts in his book a canzonet in four parts, in which every rule of composition is violated, and calls it *modern*; as if error was always *new*. But besides a natural tendency in human nature, or at least in the nature of authors, towards envy and malignity, Aristoxenus had a *system* to support, which is usually done at the expence of moderation, truth, and every thing that stands in its way (k); for, like the tyrant Procrustes, the builder of a system, or the defender of an hypothesis, cuts shorter what is too long, and stretches to his purpose whatever is too short.

The music of the Greeks, in the time of Aristoxenus, was too remote from perfection to be much injured by innovation and refinement; and yet Athenæus (l) gives a passage from a work of this writer that is now lost, in which he makes the following complaints: "I, and a few others, recollecting what

(g) *Μελη παρακεχρωσμενα. Polit. 8.*

(h) *Life and Writings of Plato.*

(i) *Phrynidis, Dritter Theil. p. 26.*

(k) "Neither Gods nor men can stand before a system." *Div. Leg. vol. iii.*

(l) *Lib. xiv. p. 632.*

Music once was, and considering what it now is, as corrupted by the theatre, imitate the people of Possidonium, who annually celebrate a festival after the Greek manner, in order to keep up the memory of what they once were; and before they depart, with tears deplore the barbarous state into which they are brought by the Tuscans and Romans (*m*)."

Plutarch frequently speaks of Music having been corrupted by the Theatre, particularly in his *Dialogue*, where he says, "If we look back into remote antiquity, we shall find that the Greeks were unacquainted with theatrical music. The only use they made of this art, was in praising the Gods, and educating youth. The idea of a theatre had not then entered their thoughts, and all their Music was dedicated to sacrifices, and to other religious ceremonies, in which they sung Hymns in honour of the Gods, and Canticles in praise of great and good men."

It should be remembered here, that Plutarch was a priest of Apollo: and, moreover, that what he, Plato, and Aristoxenus say, concerning the injuries which Music had received from the theatre, favours very much of cant and prejudice. Athenæus, on the contrary, tells us, that notwithstanding the complaints of Aristoxenus against theatrical corruption, others were of opinion, that Music derived its principal improvements in Greece from the theatre: and it seems natural, that the hope of applause, and the fear of censure should operate more powerfully on the industry and faculties of a composer, or performer, than the idea of private praise, or blame. And, if we may judge of ancient times by the present, the theatre seems the place to develope all the powers of Music,

(*m*) Though Aristoxenus lived with Alexander the Great, with Plato, and with Aristotle, when all other arts and sciences had arrived at their greatest degree of force and refinement, yet Music, from whatever cause, does not seem, at that, or at any time, to have kept pace

with other arts in its improvements: at least, it did not in Italy; nor, indeed, in England or France, if we compare the Poetry of Milton with the Music of Henry Lawes, or the writings of Racine and Boileau, with the compositions of Lully.

and

and to expand the talents of its professors. For it is at the Musical Theatre, the modern *Temple of Apollo and the Muses*, that perfection of various kinds is more frequently found, than any where else. But *old things* do get violently praised, particularly Music, after it ceases to give pleasure, or even to be heard; and old people exclusively praise what pleased them in their youth, without making allowance, for their own want of judgment and experience at that time, which, perhaps, joined to the disposition of youth to be easily pleased, occasioned their former delight.

It is natural to suppose that Greek Music, like other arts, and other things, had its infancy, maturity, and decrepitude; and that in second childhood, as its effects were more feeble, its pursuits would be more trivial, than before its decline. Few great actions were achieved by the Greeks after their total subjection. However, they cultivated Music under the Roman emperors, under their own, and are still delighted with it under the Turkish government; but their Music is now so far from being the standard of excellence to the rest of the world, that none but themselves are pleased with it.

C H A P. V.

Of ancient Musical Sects, and Theories of Sound.

IN the *Dissertation* (a), the reader is promised a short history of *Temperament*, and of the *Philosophy of Sound*, commonly called *Harmonics*, as far as they appear to have been known to the Greeks; and this seems to be the place to treat of these matters.

No part of *Natural Philosophy* has, I believe, been more fruitful of different Theories, or presented a more perplexing

(a) Page 135.

variety of opinions to our choice, both in ancient and modern times, than that which has *Musical Sound* for its object. The Greeks were divided into numerous sects of Musical speculators before, and after, the time of Aristoxenus: the *Epigonians*, *Damonians*, *Eratoclians*, *Agenorians*, and many others enumerated by Porphyry, in his Commentary upon the Harmonics of Ptolemy. Of these, however, all we know is, that they *differed*; it is perhaps little to be lamented that we no longer know about *what*. The two great and principal sects were the Pythagoreans, and Aristoxenians: the founders of these, with Lafus, Euclid, and Ptolemy, were the most illustrious Musical Theorists of antiquity. Of these, therefore, and their doctrines, I shall speak separately.

P Y T H A G O R A S.

Posterity has been very liberal to this Philosopher in bestowing upon him such inventions as others had neglected to claim, particularly in Music; for there is scarce any part of it, as a science, with which he has not been invested by his generous followers and biographers. *Musical Ratios* have been assigned to him, with the method of determining the gravity or acuteness of sounds by the greater or less degree of velocity in the *vibrations of strings*; the *addition of an eighth string* to the Lyre (*n*); the *Harmony of the Spheres* (*o*); and the *Greek Musical Notation* (*p*). His right indeed to some of these discoveries has been disputed by several authors, who have given them to others with as little reason, perhaps, as they had been before bestowed upon him.

But there is one discovery, relative to Music, that has, at all times, been unanimously assigned to him, which, however, appears to me extremely doubtful, not only whether it

(*n*) Pliny, *lib. ii. cap. 22.* Censorinus, *cap. xiii. p. 82.*

(*o*) See p. 296.

(*p*) Diff. sect. V. and p. 389.

was made by him, but whether, in the manner it is related, it was ever made by any one.

We are told by Nicomachus, Gaudentius, Jamblicus, Macrobius, and all their commentators, -“ that Pythagoras, one day meditating on the want of some rule to guide the ear, analogous to what had been used to help the other senses, chanced to pass by a blacksmith's shop, and observing that the hammers, which were four in number, sounded very harmoniously, he had them weighed, and found them to be in the proportion of 6, 8, 9, and 12. Upon this, he suspended four strings of equal length and thickness, &c. fastened weights, in the above-mentioned proportions, to each of them respectively, and found that they gave the same sounds that the hammers had done; viz. the fourth, fifth, and octave to the gravest tone; which last interval did not make part of the musical system before; for the Greeks had gone no farther than the Heptachord, or seven strings, till that time (q).”

This is the substance of the account, as it has been lately abridged by Mr. Stillingfleet, who points out many incredible circumstances with respect to the weights, 6, 8, 9, 12, not giving the intervals pretended; but seems not to have seen the least difficulty in the fact, relative to *different hammers producing different sounds upon the same anvil* (r).

But, though both hammers and anvil have been swallowed by ancients and moderns, and have passed through them from one to another, with an ostrich-like digestion, upon examination and experiment it appears, that hammers of different size and weight will no more produce *different tones* upon the *same anvil*, than bows, or clappers, of different sizes, will from the *same string* or *bell* (s).

(q) *Principles and Power of Harmony*, p. 8.

(r) The frontispiece to M. Marpurg's *Hist. of Music*, represents the Samian sage in the act of weighing the hammers.

VOL. I.

(s) Indeed, both the hammers and anvils of antiquity must have been of a construction very different from those of *our degenerate days*, if they produced any tones that were strictly *Musical*. Of the

The long belief of this story proves that philosophers themselves have sometimes taken facts upon trust, without verifying them by experiment. And as the tone of the hammers was asserted without proof, so was the effect of their different weights, fastened to strings; this Galileo discovered (*t*). And Bontempi, in trying the power of weights upon strings in the Pythagoric proportions of 6, 8, 9, 12, found, that instead of giving the 4th, 5th, and 8th of the gravest tone, they produced only the minor 3d. major 3d. and tritonus; so that the whole account falls to the ground. But though modern incredulity and experiment have robbed Pythagoras of the glory of discovering musical ratios by *accident*, he has been allowed the superior merit of arriving at them by meditation and design. At least the invention of the *Harmonical Canon*, or *Monochord*, has been ascribed to him both by ancient and modern writers (*u*).

the millions of well-organized mortals, who have passed by blacksmith's shops, since the time of Pythagoras, I believe no one was ever detained by a *single note*, much less by an harmonious *concord*, from those Vulcanian instruments. A different kind of noise, indeed, will be produced by hammers of different weights and sizes; but it seems not to be in the power of the most subtle ear to discover the least imaginable difference, with respect to gravity or acuteness. But though *different noises* may be produced from different bodies, in proportion to their size and solidity, and every room, chair, and table, in a house, has a particular tone, yet these *noises* can never be ascertained like Musical Tones, which depend upon reiterated and regular vibrations of the aliquot parts of a string, or other elastic body; and in wind-instruments, upon the undulations of the air conveyed into a tube. *Noise* may, indeed, be *forced* from a musical string, or instrument, by violence; but *noise* proceeding from bodies non-elastic, or immusical, can never be *softened* into sound. M. Rousseau has in-

geniously imagined that *noise* is of the same nature as *sound*, with this difference, that to produce sound, the Harmonies of the whole tone itself should only be heard; such as the 8th, 12th, 15th, and 17th; whereas noise is the compound of a confused multitude of jarring sounds, of which the vibrations never coincide; such as the 7th, 9th, 11th, &c.

See *Dict. de Mus. Art. Bruit*.

(*t*) The numbers 6, 8, 9, 12, applied to different lengths of strings, would, indeed, give the intervals mentioned. But it is proved, that to produce those intervals, by the *tension* of different weights, the weights must be the squares of those numbers: that is, 36, 64, 81, 144. It is astonishing how the blunder had been echoed from author to author, without experiment, till the time of Galileo.

(*u*) Vide Aristid. Quint. p. 116. *Prin. and Power of Harm. Hist. des Mathem. par Montucla. Euler, Tentamen novæ Theor. Mus.* and all the writers upon *Harmonics* and *Temperament*.

The *Monochord* was an instrument of a single string, furnished with moveable bridges

I shall enter no deeper into this subject here, than is absolutely necessary to explain the nature of the discovery attributed to Pythagoras, to which Music is indebted for the honourable appellation of *Science*; reserving for the second volume what use has been made of it by modern theorists.

Pythagoras supposed the air to be the *vehicle* of sound, and the agitation of that element occasioned by a similar agitation in the parts of the sounding body, to be the *cause* of it. The vibrations of a string, or any other sonorous body, being communicated to the air, affected the auditory nerves with the sensation of sound; and this sound, according to him, was acute or grave, in proportion as the vibrations were quick or slow. It was also known, by experiment, that of two strings equal in every thing but length, the shorter made the quickest vibrations, and gave the acuter sound; in other words, that the number of vibrations made in the same time by two strings of different lengths, were inversely as those lengths; that is, the greater the length, the smaller the number of vibrations in any given time. By these discoveries it was that sound, considered in the vibrations that cause it, and the dimensions of the vibrating or sonorous body, was reduced to quantity, and as such, became subject to calculation, and expressible by numbers. Thus, for instance, the two sounds that form an octave, are expressed by the numbers 1 and 2; which represent either the number of vibrations in a given time, or the length of the strings; and mean nothing more mysterious than that the acuter sound vibrates twice, while the graver vibrates once; or, that the string producing the lower sound, is twice the length of that which gives the upper. If we consider the

bridges, and contrived for the measuring and adjusting the ratios of musical intervals, by accurate divisions. Arist. Quint. says, that this instrument was recommended by Pythagoras on his death-bed, as the musical investigator, the criterion of truth. It appears to have been in con-

stant use among the ancients, as the only means of forming the ear to the accurate perception, and the voice to the true intonation of those minute and difficult intervals which were then practised in Melody.

vibrations the higher sound is as 2, the lower as 1: the reverse, if we consider only the lengths. In the same manner, and in the same sense, the 5th is expressed by the ratio of 2 to 3, and the 4th by that of 3 to 4.

Such was the ancient philosophy of sounds, of which Pythagoras is recorded as the first teacher. But how much of this theory was founded on experiment and demonstration, and how much of it upon hypothesis; how much of it was known, and how much taken for granted, cannot certainly be determined. The story just now discussed is too much embarrassed with absurdities and impossibilities to guide us to any probable conjecture, as to the method by which Pythagoras *actually* arrived at his conclusions (x).

Indeed it was so late as the beginning of the present century (y), before this ancient theory of sound was fully confirmed, and the laws of vibrations, and the whole doctrine of musical strings, established upon the solid basis of mathematical demonstration.

The second musical improvement attributed to Pythagoras, was the addition of an eighth string to the Lyre, which, before his time had only seven, and was thence called a *Hep-tachord*. It is supposed by several ancient writers that the scale of this instrument, which was that of Terpander, consisted of two conjoint Tetrachords: EFGAB $\flat$ CD; and that Pythagoras, by adding an eighth sound, at the top, and altering the tuning of the fifth, formed this scale:

(x) The discovery, as far as it relates to the lengths of strings, was easily made, because it depended upon an obvious experiment. It was, likewise, easily perceived, that a short string vibrated with more velocity than a long one; but between the certainty of this general fact, and the certainty that the vibrations were in a ratio exactly the inverse of the lengths, there is a considerable gulph. (See Smith's Harmonics, sect. I. art. 7. and note f.) We have no account of the bridge upon

which Pythagoras got safely over. Experiment, here, is out of the question; for the slowest vibrations that produce musical sound are far too quick to be counted or distinguished. The inference, however, was natural, though it does not appear that the ancients were able to support it by strict and scientific proof.

(y) 1714. See Phil. Trans. and *Methodus incrementorum directa et inversa*, by Dr. Brook Taylor.

EFGA,

EFGA, BCDe, or a similar scale, consisting of two *disjunct Tetrachords* (z).

After musical ratios were discovered and reduced to numbers, they were made by Pythagoras and his followers, the type of order and just proportion in all things: hence virtue, friendship, good government, celestial motion, the human soul, and God himself, were *Harmony*.

This discovery gave birth to various species of Music, far more strange and inconceivable than Chromatic and Enharmonic: such as *Divine Music*, *Mundane Music*, *Elementary Music*, and many other divisions and subdivisions, upon which Zarlino, Kircher, and almost all the old writers, never fail to expatiate with wonderful complacency. It is, perhaps, equally to the credit and advantage both of Music and Philosophy,

(z) How this scale was generated by the *Triple progression*, or series of perfect 5ths, the Abbé Rouffier has lately very well discussed, in his *Memoire sur la Musique des Anciens*. I shall endeavour to explain what is meant by the *triple progression* in Music, which is the basis of this ingenious hypothesis; referring the reader to the *Memoire* itself for his proofs, as inserting them here would require too much time and space for a work of this kind, not purely didactic.

Let any sound be represented by unity, or the number 1; and as the 3d part of a string has been found to produce the 12th, or octave, of the 5th above the whole string, a series of 5ths may be represented by a *triple geometric progression* of numbers, continually multiplied by 3; as 1 3 9 27 81 243 729; and these terms may be equally supposed to represent 12ths, or 5ths, either ascending or descending. For whether we divide by 3, or multiply by 3, the terms will be in the proportion of a 12th, or octave, to the 5th, either way. The Abbé Rouffier, imagining that the ancients sung their scale backwards, as we should call it, by *descending*, annexes to his numbers the sounds following:

Term	I	II	III	IV	V	VI	VII
	1	3	9	27	81	243	729
	B	E	A	D	G	C	F

out of which series of 5ths, by arranging the sounds in Diatonic order, may be formed the Heptachord, or 7th, BCDEFGA; and to these, adding the duple of the highest sound, in the proportion of 2 to 1, the Abbé supposes Pythagoras acquired the octave, or *Proslambanomenos*. This is throwing a mite into the charity-box of poor Pythagoras, without, however, telling us in what reign the *Obolum* was coined; for I have met with no ancient author who bestows the invention of Proslambanomenos upon this philosopher. The Abbé does not let him or his followers stop here, but supposes an 8th term, 2187, added to the progression given above, by which a Bb was obtained, which furnished the minor semi-tone below B. The system of Pythagoras, according to the Abbé, was bounded by this 8th term, and the principle upon which it was built being lost, the Greeks penetrated no farther into the regions of modulation, where they might have enriched their Music, but contented themselves, in after times, with transpositions of this series of sound.

that

that they have long descended from these heights, and taken their proper and separate stations upon *earth*: that we no longer admit of Music that cannot be *heard*, or of Philosophy that cannot be *understood*.

Aristides Quintilianus assures us, that Music comprehends Arithmetic, Geometry, Physics, and Metaphysics, and teaches every thing, from *solfaying* the scale, to the nature and construction of the soul of man, and the soul of the universe. To confirm this, he quotes as a *divine saying*, a most curious account of the *end* and *business* of Music, from one master Panacmus, which informs us that the province of Music is not only to arrange musical sounds, and to regulate the voice, but to unite and harmonize every thing in nature (*a*). This writer, p. 102, in solving the question, whence it is that the soul is so easily affected by *Instrumental* Music, acquaints us, in the Pythagorean way, how the soul frisking about, and playing all kinds of tricks in the purer regions of space, approaches by degrees to our gross atmosphere; gets a taste for matter and solidity, and at length acquires a warm and comfortable body to cover her nakedness withal. Here she picks up nerves and arteries; there membranes; here spirit or breath; and all in a most extraordinary manner; especially the arteries and nerves: for what should they be made of, but the *circles* and *lines* of the spheres, in which the soul gets entangled in her passage, like a fly in a spider's web. Thus, continues he, the body becomes similar in its texture to instruments of the wind and stringed kind. The nerves and arteries are strings, and at the same time they are pipes filled with wind. "What wonder, then, says Arist. Quint. if

(*a*) Master Thomas Mace, author of a most delectable book, called *Musick's Monument*, would have been an excellent *Pythagorean*; for he sustains that the mystery of the Trinity is perspicuously made plain by the connection of the three Harmonical Concords, 1, 3, 5: that Music and

divinity are nearly allied; and that the contemplation of concord and discord; of the nature of the octave and unison, will so strengthen a man's faith, "that he shall never after degenerate into that *gross sub-beastical sin* of atheism." p. 268.

the soul, being thus intimately connected with a body similar in construction to those instruments, should sympathize with their motions."

Pythagoras is said, by the writers of his life, to have regarded Music as something celestial and divine, and to have had such an opinion of its power over the human affections that, according to the Egyptian system, he ordered his disciples to be waked every morning, and lulled to sleep every night, by sweet sounds. He likewise considered it as greatly conducive to health, and made use of it in disorders of the body, as well as in those of the mind. His biographers and secretaries even pretend to tell us what kind of Music he applied upon these occasions. Grave and solemn, we may be certain; and *Vocal*, say they, was preferred to *Instrumental*, and the Lyre to the Flute, not only for its decency and gravity, but because instruction could be conveyed to the mind, by means of singing at the same time that the ear was delighted. This was said to have been the opinion of Minerva. In very high antiquity, mankind gave human wisdom to their Gods, and afterwards took it from them, to bestow it on mortals (*b*).

L A S U S,

According to Suidas (*c*), was a native of Hermione, a city of Peloponnesus in the kingdom of Argos. He flourished in the 58th Olympiad, 548 B. C. and was the most ancient author known who had written upon the theory of Music. But he did not confine himself to theory; he became excellent in the practice of the art, which then included Poetry, and all

(*b*) In perusing the list of illustrious men, who have sprung from the school of Pythagoras, it appears that the love and cultivation of Music was so much a part of their discipline, that almost every one of them left a treatise behind him upon the subject. The life of this philosopher has been so frequently written, and the events

of it are so generally known, that it seems only necessary here to remind the reader of his having been in Egypt at the time when Cambyfes conquered that country; and that most chronologers place his death 497 years B. C. at the age of seventy-one.

(*c*) Suid. voc. Λαρτος.

its dependencies; he was likewise a great Dithyrambic Poet, according to Clemens Alexandrinus (*d*), and the first who introduced that species of composition in the public Games, where a premium was adjudged to him for his performance of it. He first established public conferences or disputations (*e*) upon scientific subjects, such as Philosophy, Poetry, Mathematics, and particularly Music, both speculative and practical. If he was not the inventor of the circular Choruses or Dances (*f*), which some have attributed to Arion, he improved them at least, as the scholiast on Aristophanes (*g*), who gives his vouchers, affirms (*h*).

As to the events of his life, which was rather a long one, but little is known: we read, however, in Herodotus, that by the advice of Lasus, the poet Onomacritus, to whom, by many, the poems that go under the name of Orpheus are attributed, was banished from Athens by Hipparchus, the son of Pisistratus. This poet, who was a fanatic, and a mythological quack, pretended to find predictions or oracles in the verses of Musæus, for those who were curious in futurity. Lasus having discovered that this pretended diviner had surreptitiously inserted into the text of Musæus a prediction that all the islands in the neighbourhood of Lemnos would be swallowed up, gave information of the forgery to Hipparchus, who sent the impostor into exile, though he had before honoured him with his confidence.

The productions of Lasus seem to have been numerous, both in Poetry and Music. But nothing of his writing is come down to us except a few fragments that have been preserved in Athenæus, whose book, like the moon in Ariosto,

(*d*) Stromat. lib. i.

(*e*) Εριστικοί λόγοι.

(*f*) Called εγκυκλιών χορών.

(*g*) In avib. vers. 1403.

(*h*) The composers of the Music and Poetry, for these kinds of dances, were

called κυκλιοδιδασκαλοι, which the same scholiast explains by the word Διθυραμβοποιοι, *Dithyrambic Poets*; for both the Poetry and Music of these dances, performed round the altar, were Dithyrambic.

has been the receptacle of *lost things*. This author speaks of a Hymn written by Lafus without the use of the *sigma*, or letter S. He likewise mentions one of his Odes, called the *Centaurs*, remarkable for the omission of the same consonant. These instances of his being a *Lipogrammatist*, or *letter-dropper*, and of his particular enmity to the hissing letter S, are greater proofs of his patience and delicacy of ear, than of his genius or good taste. The late Dr. Pepusch (*i*) gave rules for composing in all keys without the intervention of flats or sharps; but such is the obstinacy of the great poets and composers of this age, that all the letters of the alphabet are indiscriminately used, and flats and sharps are become more numerous than ever!

With respect to the musical discoveries of Lafus, both in theory and practice, all that we know of them may be reduced to three heads.

1st. Aristoxenus (*k*), in speaking of the nature of sound, attributes to him, in common with certain Epigonians, a heterodox opinion, that *sound had a latitude* (*l*). Meibomius is perplexed by the passage, but is inclined to think it means only that in sustaining a note, the voice varied a little up and down, and did not *strictly* keep to one *mathematical line* of tone. This explication, however, is not satisfactory; for the expression naturally leads to the *idea* of a *Temperament*; and seems to say that the intonation of the scale admitted of some variety; in other words, that the exact ratio of intervals might be departed from without offending the ear (*m*). And what is said of Lafus by Plutarch, in his Dialogue on Music, renders

(*i*) *Treatise on Harmony*, 1731.

(*k*) *Lib. i. p. 3.*

(*l*) Πλάτος ἔχειν.

(*m*) This idea is greatly confirmed by the same expression, *πλάτος ἔχειν*, occurring in a passage of Galen, quoted by Dr. Smith, p. 47, of his *Harmonics*, 1st Edit. "It is probable, says Galen, that in the Lyre,

the accurate tuning is one, and individual; but the practical tuning, *πλάτος ἔχειν*, admits of latitude." This passage, which is curious throughout, is quoted by Salinas, to prove that the ancients had in practice a temperament, though it did not come in the way of theorists to speak of it in their scientific books.

this idea still more probable. He is there mentioned as a great innovator, who imitated the *compass* and *variety* of wind-instruments; as well as Epigonius, who was the inventor of the instrument of forty strings (*n*). Among the corruptions complained of in the *new* Music, the frequent and licentious transitions from one mode and genus to another, was not the least. If therefore the object of this multiplication of strings may be supposed to have been the convenience of having an instrument ready tuned for all the modes, like our Harpsichords, it seems probable that both Lafus and Epigonius might have been *Temperers*, and have accommodated their *doctrine* to their *practice*.

2dly. Theon of Smyrna testifies that Lafus, as well as the Pythagorean Hippafus of Metapontus, made use of two vases of the same size and tone, in order to calculate the exact ratio or proportions of concords. For by leaving one of the vases empty, and filling the other half full of water, they became Octaves to each other: and filling one a 4th part full, and the other a 3d, the percussion of the two vessels produced the concords of 4th and 5th: from which process resulted the proportions of these three concords contained in the numbers 1, 2, 3, 4 (*o*).

3dly. Lafus, according to Plutarch, introduced a dithyrambic licence, or irregularity into Musical Measure, or Rhythm; and upon his Lyre imitated the compass and variety of the Flute.

A R I S T O X E N U S.

This is the most ancient writer on the subject of Music, of whose works any tracts are come down to us. He was born

(*n*) See p. 430.

(*o*) This assertion, which has been taken upon trust, like the Anvil story of Pythagoras, is equally false: to tune glasses by water has been lately practised, and thought a new discovery; but that their

tones are altered in the proportions given above, is by no means true. Most glasses are lowered about a whole tone, by being half filled with water, and not more than a major 6th if quite filled.

at Tarentum, a city in that part of Italy called *Magna Græcia*, now Calabria. He was the son of a Musician, whom some call Mnesias, others Spintharus. He had his first education at Mantinæa, a city of Arcadia, under his father, and Lampus of Erythræ; he next studied under Xenophilus, the Pythagorean; and lastly under Aristotle, in company with Theophrastus. Suidas, from whom these particulars are transcribed, adds, that Aristoxenus enraged at Aristotle having bequeathed his school to Theophrastus, traduced him ever after. But Aristocles the Peripatetic, in Eusebius (*p*), exculpates Aristoxenus in this particular, and assures us that he always spoke with great respect of his master Aristotle.

From the preceding account it appears that Aristoxenus lived under Alexander the Great, and his first successors.

His *Harmonics* in three books, all that are come down to us, together with Ptolemy's *Harmonics*, were first published by Gogavinus, but not very correctly, at Venice, 1562, in 4to. with a Latin version. John Meursius next translated the three books of Aristoxenus into Latin, from the MS. of Jos. Scaliger, but, according to Meibomius, very negligently. With these he printed at Leyden, 1616, 4to. Nicomachus and Alypius, two other Greek writers on Music. After this Meibomius collected these musical writers together, to which he added Euclid, Bacchius senior, Aristides Quintilianus; and published the whole, with a Latin version and notes, from the elegant press of Elzevir, Amst. 1652. The learned editor dedicates these ancient musical treatises to Christina, queen of Sweden.

Aristoxenus is said by Suidas to have written 452 different works, among which those on Music were the most esteemed; yet his writings upon other subjects are very frequently quoted by ancient authors, notwithstanding Cicero, and some others, say that he was a bad philosopher, and had nothing in his head

(*p*) *Præpar. lib. xv.*

M m m 2

but

but Music. The titles of several of the lost works of Aristoxenus, quoted by Athenæus and others, have been collected by Meursius in his notes upon this author; by Tonsius and Menage, all which Fabricius has digested in alphabetical order (q). I shall here only mention such as concern Music, which are upon subjects so interesting to enquirers into the merits of ancient music, that their loss is much to be lamented.

1. *Of Performers on the Flute, and concerning Flutes and other Musical Instruments* (r).

2. *Of the Manner of boring, or piercing Flutes* (s).

3. *Of Music in General*. In this work, which was different from his *Harmonics*, he treated not only of the Rhythmical, Metrical, Organical, Poetical, and Hypocritical parts of Music, but of the *History of Music*, and *Musicians* (t).

4. *Of the Tragic Dance* (u).

With respect to the tracts of Aristoxenus that are come down to us, they are cited by Euclid, Cicero, Vitruvius, Plutarch, Diogenes Laertius, Athenæus, Arist. Quintilianus, Ptolemy, and Boethius. And as a musical writer he is so much celebrated by the ancients, and so frequently mentioned by the moderns, that his works which are extant, seem to deserve a particular attention. They are given by all his editors as divisions of one and the same work; but the two first books are evidently independent fragments. The second book is not a *second*, but *another first part*. It is surprising that Meibomius should regard it as a *continuation*, and wonder in his notes, that Porphyry should quote the *second book* as the *first*. The second book is plainly the opening of another work, as appears by its beginning with an explanation of the subject, and a sketch of the order in which the author proposed to treat it,

(q) Bib. Græca, lib. iii. cap. 10.

(r) Περὶ αὐλητῶν ἢ περὶ αὐλῶν καὶ ὀργάνων.

(s) Περὶ αὐλῶν τροπῆως.

(t) Περὶ Μουσικῆς.

(u) Περὶ τραγικῆς ὀρχήσεως.

all which is done in the *first* book. It is likewise full of repetitions. There appears, however, through the cloud of bad readings, and all kinds of corruptions in the text, to be an accuracy and an Aristotelian precision in these old books, which are not to be found in later writers, who seem to have all the negligence and inaccuracy of compilers.

As Pythagoras and Aristoxenus were heads of the two most numerous and celebrated musical sects in antiquity, I shall endeavour to make such of my readers as are curious in these matters, acquainted with their different tenets.

The *Pythagoreans*, by their rigid adherence to *calculation*, and the accurate divisions of the Monochord, may be said to have trusted more to the judgment of the *Eye*, concerning the perfection of consonance, than to that of the *Ear* (*x*). Intervals, according to them, were *consonant* or *dissonant*, in proportion as the ratios of the vibrations were simple or complex. Thus the octave was more perfect than the 5th, because the ratio of 1 to 2 is more simple, and more easily perceived, than that of 2 to 3: and the 5th, for the same reason, was more perfect than the 4th, $\frac{3}{2}$. It was upon this principle that they allowed of no deviation from the strict ratios of sounds. They left nothing to the uncertain judgment of the ear, which they thought no more able to determine a *perfect* consonance without a Monochord, than the *eye* to form a perfect circle without compasses.

Aristoxenus, on the contrary, referred every thing to the *ear*. He thought the senses sufficiently accurate for *Musical*, though not for *Mathematical* purposes (*y*); and that it was absurd to aim at an artificial accuracy in gratifying the ear, beyond its own power of distinction. The philosophy of the Pythago-

(*x*) The Pythagoreans were distinguished in antiquity, by the appellation of *Canonici*, as being governed by the *Monochord*, or *Harmonic-Canon*; and the *Aristoxenians* by that of *Musici*, on account of

their taking only the ear and practice for their guides. *Porphyr. ex vers. Wallis, Oper. Mathem. tom. iii. p. 207.*

(*y*) *Aristox. p. 33.*

reans, their velocities, vibrations, and proportions he rejected with contempt (z), as being *foreign to the subject*; substituting *abstract* causes in the room of *experience*, and making Music less the object of *sense* than of *intellect*.

According to these principles, his doctrine maintained, that concords were to be taken by the judgment of the ear only, and other intervals of which the ear was less able to determine the perfection, by the *difference*, or sum total of concords (a). Thus the *Tone* was the difference between the 4th and 5th: the *Ditone* was taken by alternate 4ths and 5ths, as Ea, aD, DG, GC (b). Had he stopped here, nothing could reasonably have been alledged against him. But taking the *Tone* as a well known interval, of which the ear from the comparison of 4th and 5th, could judge with sufficient exactness, he made it the measure of all other intervals; of the greater by addition, and of the less by division. Thus the 4th contained, according to him, two *Tones* and a half; the 5th, 3 and $\frac{1}{2}$; the *Octave*, consequently, 5 *Tones* and 2 semi-tones, or 6 *Tones*. And, further, the *Tone* he divided into 2, 3, and 4 *equal* parts. By this process, as it is justly objected to him by Ptolemy, he acted inconsistently with his own principles; pretending to trust solely to the *ear*, and to exclude *reason* and *calculation*, at the same time that he was making a parade of both, in a way either totally useless and nugatory, or more complicated and difficult than that which he had rejected. If the ear is unable to determine the exact ratio of a concord, still less is it able accurately to bisect a tone; and that a tone cannot be numerically divided into two, or more *equal* parts, has long been demonstrated (c). It can only be done

(z) *Ibid.* p. 32.

(a) *Ibid.* 55.

(b) This was not our consonant major 3d, but a dissonant interval, composed of two major tones $\frac{8}{5} \times \frac{8}{5}$.

(c) This was demonstrated by Euclid, in his *Señio Canonis*, though a close fol-

lower of Aristoxenus, in his *Introductio Harmonica*. To divide the tone $\frac{9}{8}$ into two equal parts, is to find a mean proportional between 8 and 9; which mean, being the square root of 72, is an *irrational*, or *surd* quantity. See Dr. Smith's *Harm.* p. 100, note (y). And *Elem. de Mus.*

by geometrical and lineal methods, more operose than the calculations of Pythagoras, and which, if accomplished, would give only false, incommensurable, and tempered intervals (*d*). Aristoxenus seems to have been led into this inconsistency by his desire of distinguishing himself from the mere practical Musicians of his time, of whose inaccuracy and want of science he frequently speaks with great contempt.

The Pythagoreans, on the other side, were not without their errors. Their principles were right, but they carried them too far, and forgot that they could no otherwise be *known* to be right, than as they were confirmed by the pleasure of the ear. How, for instance, did they know that the ratio from 2 to 3 was that of a perfect fifth but by the ear, which, upon repeated trial, found that interval most harmonious when produced by strings in *that* proportion? But it was the peculiar character of the Pythagorean philosophy, to erect abstract numbers and proportions into physical causes. Not content with pursuing their principle of the simplicity of ratios, as far as experience warranted, and the ear approved, they set it up as an *à priori* principle, and rejected intervals which the ear pronounces to be concords, merely because they did not fall within the proportions which they chose to admit. The compound interval, for instance, of the 8th and 4th, though undoubtedly concord, they would not admit as such, because its ratio 3 : 8, is neither *multiple*, nor *superparticular*, the only proportions they admitted as consonant, on account of their simplicity (*e*).

They are, besides, charged both by Ptolemy and Aristoxenus, with sometimes assigning such ratios to intervals as the ear did not approve; but no instance is given. It would be

Mus. par M. D'Alembert, Part I. Chap. vii.

(*d*) See Differt. p. 135.

(*e*) *Multiple* is, where the greater term

contains the less, a number of times, as 1 : 2, 1 : 3, 1 : 4; *superparticular*, where the difference is only 1; as 2 : 3, 3 : 4, &c.

injustice, however, to quit these famous musical theorists without acknowledging that their physical doctrines concerning the production of sound, and the causes of gravity and acuteness, have been confirmed, by modern philosophy, and their metaphysical speculations concerning the causes of consonance, adopted by modern writers of no inconsiderable reputation (*f*).

E U C L I D.

As Pythagoras was the first who found out musical ratios, by the division of a Monochord, or single string, a discovery which tradition only had preserved (*g*), *Euclid* was the first who wrote upon the subject, and reduced these divisions to mathematical demonstration.

This great geometrician flourished in the time of Ptolemy Lagus, that is, about 277 B. C. His *Elements* were first published at Basil, in Swisserland, 1533, by Simon Grynaeus, from two MSS. the one found at Venice, and the other at Paris. His *Introduction to Harmonics* (*h*), which in some MSS. was attributed to Cleonidas, is in the Vatican copy given to Pappus; Meibomius, however, accounts for this, by supposing those copies to have been only two different MS. editions of Euclid's work, which had been revised, corrected, and restored from the corruptions incident to frequent transcription by Cleonidas and Pappus, whose names were, on that account, prefixed. It first appeared in print with a Latin version, in 1498, at Venice, under the title of *Cleonidæ Harmonicum Introductorium*: who Cleonidas was, neither the editor, George

(*f*) Descartes, *Euler*, *Tent. præf.* p. 11, 12. Buffon, tom. vi. p. 54, 55, 8vo.

(*g*) Indeed it is more than probable that Pythagoras acquired all his musical philosophy in Egypt, where he resided twenty-two years; and the numbers 6, 8, 9, 12, which are exactly right, applied to lengths

and vibrations, being known to the Chaldeans, as Plutarch informs us, *de Proc. Anim.* is a strong proof that the Pythagoreans did not first discover those proportions.

(*h*) Εισαγωγὴν ἀρμονικὴν.

Valla, nor any one else pretends to know. It was John Pena, a mathematician in the service of the king of France, who first published this work at Paris, under the name of Euclid, in 1557. After this, it went through several editions with his other works.

His *Section of the Canon* (i) follows his *Introduction*; it went through the same hands, and the same editions, and is mentioned by Porphyry, in his Commentary on Ptolemy, as the work of Euclid. This tract chiefly contains short and clear definitions of the several parts of Greek Music, in which it is easy to see that mere *Melody* was concerned; as he begins by telling us, that the science of *Harmonics* considers the nature and use of Melody, and consists of seven parts: Sounds, Intervals, Genera, Systems, Keys, Mutations, and Melopœia; all which have been severally considered in the Dissertation.

Of all the writings upon ancient Music, that are come down to us, this seems to be the most correct and compressed: the rest are generally loose and diffused; the authors either twisting and distorting every thing to a favourite system, or filling their books with metaphysical jargon, with Pythagoric dreams, and Platonic fancies, wholly foreign to Music. But Euclid, in this little treatise, is like himself, close, and clear; yet so mathematically short and dry, that he bestows not a syllable more upon the subject than is absolutely necessary (k).

According to Dr. Wallis (l), Euclid was the first who demonstrated that an octave is somewhat less than *six whole tones*; and this he does in the 14th Theorem of his *Section of the Canon*.

(i) Κατατομή κανόνος.

(k) His object seems to have been the compressing into a scientific and elementary abridgment, the more diffused and speculative treatises of Aristoxenus. He was the D'Alembert of that author; explaining his principles, and, at the same time, seeing and demonstrating his errors. The musical writings of Rameau were dif-

fused, obscure, and indigested; but M. D'Alembert extracting the essence of his confused ideas, methodized his system of a *Fundamental Base*, and compressed, into the compass of a pamphlet, the substance of many volumes. See *Elements de Musique, suivans les Principes de Rameau*.

(l) *Phil. Trans.* No. 242, and Lowthorp's *Abridg.* vol. i.

In the 15th Theorem, he demonstrates that a fourth is less than two tones and a half, and a fifth less than three and a half; but though this proves the necessity of a temperament upon fixed instruments, where one sound answers several purposes, yet he gives no rules for one, which seems to furnish a proof that such instruments were at least, not *generally* known or used by the ancients.

What Aristoxenus called a *half-tone*, Euclid demonstrated to be a smaller interval, in the proportion of 256 to 243. This he denominated a *limma*, or *remnant*; because giving to the *fourth*, the extremes of which were called *Soni Stabiles*, and were regarded as fixed and unalterable, the exact proportion of 4 to 3, and, taking from it two major tones $\frac{8}{9} \times \frac{8}{9}$, the *Limma* was all that remained to complete the *Diateffaron*. This division of the *Diatonic Genus* (*m*) being thus, for the first time, established upon mathematical demonstration, continued in favour, says Dr. Wallis, for many ages. But this will be further explained under the subsequent articles.

D I D Y M U S

Was an eminent Musician of Alexandria, and, according to Suidas, cotemporary with the emperor Nero, by whom he was much honoured and esteemed. This proves him to have been younger than Aristoxenus, and more ancient than Ptolemy, though some have imagined him to have preceded Aristoxenus. He wrote upon Grammar and Medicine, as well as Music; but his works are all lost, and the whole that we know at present of his harmonical doctrines is from Ptolemy, who preserved and disputed them. However, this author confesses him to have been well versed in the canon and harmonic divisions, and if we may judge from the testimony

(m) See *Dissert.* sect. II.

even of his antagonist, he must have been not only an able theorist in Music, but a man of considerable erudition. As this Musician preceded Ptolemy, and was the *first* who introduced the *minor tone* into the scale, and, consequently, the practical major 3d. $\frac{4}{3}$, which harmonized the whole system, and pointed out the road to counterpoint, an honour that most critics have bestowed on Ptolemy, he seems to have a better title to the *Invention* of modern *harmony*, or *music in parts*, than Guido.

“The best species of Diapason, says Doni, and that which is the most replete with fine harmony, and chiefly in use at present, was invented by Didymus. . . . His method was this: after the major semitone EF. $\frac{1}{1}\frac{6}{5}$, he placed the minor tone in the ratio of $\frac{1}{9}$, between FG, and afterwards the major tone $\frac{2}{3}$, between GA (*n*); but Ptolemy, for the sake of *innovation*, placed the major tone where Didymus placed the minor (*o*).” Ptolemy, however, in speaking of Didymus and his arrangement, objects to it as contrary to the judgment of the ear, which requires the major tone below the minor. The ear certainly determines so with us: is it not therefore probable, that in Ptolemy’s time the major key was gaining ground? Upon the whole, however, it appears, that these authors only differ in the *order*, not the *quality* of intervals.

P T O L E M Y.

This great Astronomer and Musician seems the most learned, close, and philosophical writer upon the subject of Music among the younger Greeks (*p*). He appears to have been more a free agent, and a more bold and original thinker on the

(*n*) There is a fashion, we find, not only in *Melody*, but *Harmony*: modern ears are best pleased with Ptolemy’s arrangement, though Doni tells us, that in the last century, the Diapason of Didymus was

most in vogue.

(*o*) Doni, *Oper. Omnia*, tom. i. p. 349.

(*p*) He flourished about 130 years after the Christian æra.

subject, than most of his predecessors; indeed he was not insensible of his own force and superiority, for he treats all former musical writers and their systems with little ceremony. Some parts of his disputes and doctrines are now become unintelligible, notwithstanding all the pains that our learned countryman Dr. Wallis bestowed on him near 100 years ago, particularly his third book, which forms a very striking contrast with the scientific solidity and precision of the two first. The instant he sets his foot within his beloved *circle*, the magic of it transforms him at once from a philosopher to a dotard. He passes suddenly from accurate reasoning and demonstration, to dreams, analogies, and all the fanciful resemblances of the Pythagorean and Platonic schools: discovers Music in the human soul, and the celestial motions: compares the rational, irascible, and concupiscent parts of the soul, to the 8th, 5th, and 4th; makes the sciences, and the virtues, some Diatonic, some Chromatic, and some Enharmonic: turns the zodiac into a Lyre, making the equinoctial the key-note of the Dorian mode: sends the Mixolydian to Greenland, and the Hyperdorian to the Hottentots!

He seems to have been possessed with an unbounded rage for constructing new scales, and correcting those of former times. He gives us no less than eight different forms of the diatonic scale, three of which were his own; the other five went under the names of more ancient Musicians of great renown; such as Archytas of Tarentum, Aristoxenus, Eratosthenes, and Didymus. Most of these scales seem but to differ in deformity, according to our present ideas of harmony and temperament. Indeed there is only one of them which modern ears could suffer, and concerning that it is necessary to be somewhat explicit.

Euclid, who first discovered that six major tones in the ratio of $\frac{2}{3}$ were more than sufficient to fill up the octave, gave two major tones and a *Limma* to his Tetrachord; which made the
major

major thirds intolerable. Didymus was the first who discovered that whole tones were of two kinds, major and minor; and, giving to his minor tone the ratio of $\frac{10}{9}$, divided his Tetra-chord into *major semitone* $\frac{16}{15}$, *minor tone* $\frac{10}{9}$, and *major tone* $\frac{9}{8}$, including the whole series in the usual bounds of a true fourth $\frac{4}{3}$ (q).

Ptolemy, near two centuries after Didymus had suggested the *major semitone*, and *minor tone*, adopted them in one of his divisions of the Diatonic 4th, but changed the place of the *minor tone*, arranging his intervals, suppose them to be these, B C D E, in the following order and proportions: major semitone $\frac{16}{15}$, major tone $\frac{9}{8}$, minor tone $\frac{10}{9}$, which, together, completed the fourth in the usual, perfect, constant, and true ratio of $\frac{4}{3}$; and these are the famous proportions of the intervals proposed in that system of Ptolemy which is known to theorists by the name of *Diatonum Intensum*, or *Sharp Diatonic*; and which, long after his time, was received in our counterpoint, and is pronounced by Dr. Wallis, Dr. Smith, and the most eminent writers on Harmonics, to be *the best division of the musical scale* (r).

(q) This arrangement has been censured by Padre Martini, and with reason, if a *Major Key* and *Counterpoint* had been in question; but, as the Abbé Rouffier justly observes, a *Minor Key*, and *Simple Melody*, were alone considered at that time. The minor tone, from C to D, therefore, had this convenience, that it rendered D a true 5th below *Mese*, the central string of the Lyre, which regulated the whole system, and to which all the other strings were tuned, as well as the octave above *Proslambanomenos*, the fundamental note of every Mode. (See *Differt.* p. 9.) When the *Major Tone* is from C to D, and the minor from D to E, as in Ptolemy's arrangement, this cannot be the case; for then the 5th from D to a, will contain only two minor tones, one major, and a major semi-tone, instead of two major tones, one minor, and a major semi-tone, of which every perfect 5th, in the ratio $\frac{3}{2}$

is composed.

(r) The intervals in our key of C natural, when made perfect, are in the following proportions, ascending: 1, $\frac{9}{8}$, $\frac{10}{9}$, $\frac{16}{15}$, $\frac{9}{8}$, $\frac{10}{9}$, $\frac{9}{8}$, $\frac{16}{15}$; that is, giving to the octave three major tones, two minor tones, and two major semi-tones, arranged in this order: from the key note to the 2d of the key, a major tone; from the 2d to the 3d of the key, a minor tone; from the 3d to the 4th, a major semi-tone; from the 4th to the 5th, a major tone; from the 5th to the 6th, a minor tone; and from the 7th to the octave, or 8th, a major semi-tone. And no sharp key can be perfect, but by being tuned in the same manner; and yet, where to place the *Minor Tone* has occasioned endless disputes among writers on Temperament. De Moivre, in his *Doctrine of Chances*, gives 210 permutations to these intervals T, T, T, t, t, H, H.

This

This arrangement of Ptolemy has been considered by some writers as a *Temperament* (s), on account of his departing from the just proportion of some of the 5ths, in order to give perfection to 3ds and 6ths. This temperament, however, if it may be so called, is become to us the standard of perfection, and every deviation from it, in the modern sense of the word, is now called temperament (t). If "*temperament* implies *imperfection*," and the alteration of intervals from those proportions which best satisfy the ear; and if those scales are the *most*, though not the *best* tempered, which most offend the ear, the word is in that sense chiefly applicable to the old Pythagorean Diatonic, adopted by Euclid, and to the other numerous divisions above mentioned.

The scale of the Pythagoreans was indeed founded upon some *principle*; being, as the abbé Rouffier has shewn, produced by a series of perfect 5ths; but the other divisions seem to have been the produce of random experiment, and *unmusical* calculation, and were as various and unfit for use, as want of principle could make them. Scarce any rule seems to have been observed, but that of keeping the *Soni Stantes*, the boundaries of the Tetrachords, unmoved from their just ratio of $\frac{4}{3}$. The ancient theorists revenged themselves, however, for this confinement by every kind of licence in the disposition of the two remaining sounds: the various tunings of which constituted what they called the *χρῶμα*, the *colours* or *shades* of the three genera. In these, all kinds of intervals seem to have been admitted, provided they were but *rational*, that is, *expressible by numbers* (u).

(s) Padre Martini, *Storia Musica*, quoted by the Abbé Rouffier, *Mém. sur la Mus. des Anc.* p. 162.

(t) In what manner this deviation became necessary, will be related in the second vol. of this work, where the subject of Temperament will be more particularly explained.

(u) To justify this account, and to give the reader some idea of the licentiousness of these ancient *Tunings*, or *Temperaments*, I shall only mention, that, instead of the two tones, and two semi-tones, to which modern theory is confined, the ancients admitted four kinds of tones, and eleven semi-tones; and, of these fifteen different ratios,

Aristoxenus did not confine himself even to this rule; for his equal divisions were neither reducible to rational numbers, nor were the vibrations of his intervals, if they could have been put in practice, commensurable. Music, however, was more obliged to him for the invention of a method which it must be allowed left every thing to the guidance of the ear, uncertain as it may be, than to those mathematical speculators who furnished it with so many accurate and demonstrable rules for being *infallibly* out of tune (x).

Ptolemy having a facility, and perhaps a pleasure, in calculating, seems to have sported with the scale, and wantonly to have *tried confusions*, by dissecting and torturing it in all possible ways; and though one of his many systems suits our present practice, it is not to be imagined that it was designedly calculated for the use of *counterpoint*, which was far from his thoughts (y). It seems, however, as if *Music in parts* was first suggested by this arrangement of the intervals; for the 3ds and 6ths, which were before so harsh and crude as to be deservedly ranked among the discords, were now softened and sweetened into that grateful coincidence with which

ratios, eleven are impracticable in Harmony, and rejected by theory, and by the ear: but, says M. Rousseau, *c'est perdre son tems, & abuser de celui du lecteur, que de le promener par toutes ces divisions*. Art. Syntonique.

(x) Indeed, it is probable, that among the ancients, as well as the moderns, many such untuneable divisions, served more to amuse Theorists, than to guide practical Musicians.

(y) That he was not the only one, however, who broke the scale on the wheel, appears from a note of M. Burette, upon a passage in Plutarch's *Dialogue on Music*; for the divisions of the Tetrachord upon the Flute, without the Enharmonic, in very high antiquity, were five.

1. The *flat Diatonic*, consisting of a semi-tone, three quarters of a tone, and

five fourths of a tone.

2. The *sharp Diatonic*, of which the three intervals were a minor semi-tone, and two major tones.

3. The *flat Chromatic*, of one third of a tone; another ditto; a tone and a half; and a third of a tone.

4. The *sesquialterate Chromatic*, of a Diesis, or quarter tone and half; ditto; and seven Dieses, or quarter tones.

5. The *sharp Chromatic*, of a semi-tone; a semi-tone, and a tone and half.

It has been already remarked, p. 135, that the numbers and proportions of the ancients are inadmissible in our counterpoint; and I beg leave to ask the learned in Harmonics, as well as practical Musicians, what pleasing effects can possibly be produced, even in *Melody*, from such strange intervals as these?

modern.

modern ears are so much delighted. It was impossible, after hearing them, for lovers of music not to feel the charms arising from the combination and succession of these consonances; and it was from this time that the seeds of that harmony which may be said, in a less mysterious sense than that of Pythagoras, to be implanted in our nature, began to spring up. They were certainly of slow growth, as no good fruit was produced from them for more than 1000 years after: but arts, like animals to whom great longevity is allowed, have a long infancy and childhood, before adolescence and maturity come on.

C H A P. VI.

Of the SCOLIA, or SONGS, of the ancient Greeks.

VOCAL Music is of such high antiquity, that its origin seems to have been coeval with mankind; at least, the lengthened tones of pleasure and pain, of joy and affliction, must long have preceded every other language, and Music. The voice of passion wants but few articulations, and must have been nearly the same in all human creatures; differing only in gravity or acuteness, according to age, sex, and organization, till the invention of words, by particular conventions, in different societies, weakened, and, by degrees, rendered it unintelligible. This primitive and instinctive language, or cry of nature, is still retained by animals, and universally understood, while our artificial tongues are known only to the small part of the globe, where, after being learned with great pains, they are spoken. “We talk of love and of hatred, says M. de Voltaire, in general terms, without being able to express the different degrees of those passions. It is the same with respect to pain and pleasure, of which there are such innumerable species.

species. The shades and gradations of volition, repugnance, or compulsion, are equally indistinct for want of colours." This censure should, however, be confined to written language; for though a word can be accurately expressed in writing, and pronounced but one way, yet the different tones of voice that can be given to it, in the utterance, are infinite. A mere negative or affirmative may even be uttered in such a manner, as to convey ideas diametrically opposite to the original import of the word.

Music, considered then as the language of the passions, is most expressive when its movements are least impeded by difficult articulations; and this accounts for the preference of one language to another, for musical purposes, and for the pleasure we receive from instrumental Music, of the most exquisite kind, and from divisions in airs that are well executed by the voice.

It has already been observed, that *Songs* preceded the use of letters, and served not only for amusement, but supplied the place of history in after-ages. Laws were originally *sung*, to be the better retained in memory, and prayers offered up to the Gods were chanted, in order to add to their solemnity and energy. The first *public* use, therefore, of Music, was in the service of religion; and the first *private* use, to alleviate labour and care, or to express hilarity during social happiness.

Theurgic *Hymns*, or *Songs of Incantation* such as those ascribed to Orpheus, which were performed in the mysteries upon the most solemn occasions, were the *first* and most ancient of which we have any account in Greece; and these are supposed to have originated in Egypt.

The *second species* consisted of poetical and *popular Hymns*, that were sung at the head of an army, or in praise of some divinity, during the public worship of the Gods in temples; and these were distinguished by particular appellations, according to the personages to whom they were addressed; as Pæans to Apollo and Mars, and Dithyrambics to Bacchus. These, however, in process of time, were lavished upon heroes, kings, and generals,

There was still a *third class*, distinct from these, which may be denominated *philosophic*, or *allegorical Hymns*, in which the attributes of the supreme Being, as the apologists for Paganism pretended, were celebrated under some fable or virtue personified.

Of all the different kinds of *Scolia*, or *festive Songs* that were in use among the inhabitants of Greece, and that were distinct from religious Hymns, those of which we have any remains, are chiefly such as were sung *at table*, during the time of banquets, or repasts. We are told, however, by Plutarch, Athenæus, Lucian, and other Greek writers, that in the *first use* of these, they were real *Pæans*, sacred Canticles, or Hymns, sung by the whole company to some divinity (z). It afterwards was the custom for each of the guests to sing alone, alternately, one of these songs, holding a branch of myrtle in his hand, which he passed about to his next neighbour, as we do the bottle; and this may be called the *second manner* of performing these songs (a). The *third* was to the accompaniment of the Lyre, and required professed Musicians, Singers, and Citharædists; for Music was now arrived at a greater degree of perfection among artists, who made it their chief employment, than gentlemen who applied themselves to it, among other exercises in the general course of education, only as an amusement (b).

As there were three several ways of performing these *Scolia*, the subjects upon which they were composed may be likewise arranged under *three Classes*. The *first class* consisted of moral Songs, of which several are preserved by Athenæus.

(z) The Gods were not then, says M. Rousseau, regarded as kill-joys, and shut out of convivial meetings; the Greeks were not afraid to let them be of the party.

(a) In process of time, to *Sing to the Myrtle*, became a proverbial expression for ignorance; as those who had a hand employed in holding the branch were unable to accompany themselves on the Lyre, which required application and talents.

(b) Aristotle, *Prob.* xv. mentions *Enharmonic Melodies* being formerly preferred

to all others, for their *ease* and *simplicity*, when it was customary for *gentlemen* to perform in Dithyrambic Choruses; which Problem not only shews that there was a time when Music in Greece, from its simplicity, and being made part of a liberal education, did not require professors who should make it their sole employment, and distinguish themselves by their execution of difficulties; but likewise fortifies the opinion advanced in the Dissertation, relative to *easy Enharmonic*.

In

In the following Scolium, Timocreon gives his opinion of riches.

Vile riches should no favour find,
By land or sea, among mankind;
But should be sent with fiends to dwell,
Down in the deepest, blackest hell:
For 'tis from them, ere since the world began,
The greatest ills have sprung, which torture man.

And Plato, Athenæus, and Lucian, have all quoted a Song upon the pre-eminence of worldly blessings:

The first of human gifts is *health*,
The next on *beauty's* pow'r attends;
The third, possessing well-earn'd *wealth*;
The fourth is *youth*, enjoy'd with friends.

Phocylides has given the same sentiment, in different words. And Aristotle, having brought it from Delphos, has done it the honour to place it at the head of his Moral Writings. Anaxandrides, however, according to Athenæus, was not so partial to it; but, on the contrary, disputed the sentiments it contained.

That health is the *first* of all blessings below,
Is a truth which no logic can fairly confute;
But the *second* on personal charms to bestow,
And on riches the *third*, I beg leave to dispute:
Next to *health*, give me *riches*; for *beauty*, though bright,
In hunger and rags is a villainous sight.

The *second Class* of Scolia, comprehends mythological hymns, and historical songs. Of these I shall give the following, from Athenæus, as specimens merely of the sentiments which these kinds of compositions contained; for as to the Measure and Music, they are now equally irrecoverable.

To the Divinities that preside over Riches and Abundance.

At the genial board I sing,
Pleasures which from plenty spring :
While the wreath adorns our brows,
Ceres well deserves our vows.
Plutus too, thy name I'll join,
And thy sister Proserpine.
Ye our social joys augment,
From your bounty flows content.
Bless our city with increase,
And our song shall never cease.

On LATONA and her Offspring.

Latona once, on Delos' isle,
Gave to the world a shining pair ;
Apollo, who makes nature smile,
Whose shoulders glow with golden hair :
And Dian', goddess of the chace,
Whose shafts unerring ever fly,
Sole sov'reign of the female race,
Nocturnal empress of the sky.

ON PAN.

O Pan, delight of nymphs and swains,
Protector of Arcadian plains,
Who lead'st the frolic dance ;
The laughing fair, who play the prude,
But fly from thee to be pursu'd,
Their favours to enhance.
They love thy rustic oaten reed ;
They know thy vigour, force, and speed,
And feign a modest fear.
Our jocund strains shall swell for thee,
And render, by their mirth and glee,
Thy name for ever dear.

Among

Among the historic, or patriotic Songs, there are none more frequently mentioned by ancient authors, than those upon Harmodius and Aristogiton, who signalized their courage against Hipparchus and Hippias, the sons and successors of Pisistratus, king of Athens. Hipparchus having publicly insulted the sister of Harmodius, he, in conjunction with his friend Aristogiton, slew him at the Panathenæan Games, which event was the signal to the natives of Athens for recovering their liberty. The following are fragments of popular songs, in honour of Harmodius.

1st Fragment.

Cover'd with myrtle-wreaths I'll wear my sword,
Like brave *Harmodius*, and his patriot friend
Aristogiton, who the laws restor'd,
The tyrant slew, and bade oppression end.

2d Fragment.

Harmodius dear ! thou art not dead,
Thy soul is to Elysium fled ;
Thy virtue there a place has won,
With Diomede, great Tydeus' son ;
With swift Achilles, too, thou art join'd,
And ev'ry friend of human kind.

Aristotle honoured his friend and kinsman, Hermias, prince of Atarneus, with a Hymn, or Canticle, which is preserved in Athenæus (*d*), and in Diogenes Laertius (*e*), for which he is said to have been arraigned at a court of justice, where he was accused of impiously lavishing upon a mortal such honour and praise, as were due only to the Gods.

(*d*) *Lib. xv.*(*e*) *In Aristot.*

ARISTOTLE'S Hymn to HERMIAS.

Virtue! thou source of pure delight,
 Whose rugged mien can ne'er affright
 The man with courage fir'd;
 For thee the sons of Greece have run
 To certain ills, which others shun,
 And gloriously expir'd.

Whene'er thy sacred seeds take root,
 Immortal are the flow'rs and fruit,
 Unfading are the leaves;
 Dearer than smiles of parent kind,
 Or balmy sleep, or gold refin'd,
 The joys thy triumph gives.

For thee the Twins of mighty Jove,
 For thee divine Alcides strove,
 From vice the world to free;
 For thee Achilles quits the light,
 And Ajax plunges into night,
 Eternal night, for thee.

Hermias, the darling of mankind,
 Shall leave a deathless name behind
 For thee untimely slain;
 As long as Jove's bright altars blaze,
 His worth shall furnish grateful praise,
 To all the Muse's train.

The offence given by Aristotle in this Poem, which his enemies denominated a Pæan, seems to have been the saying that the actions of his friend would be sung by the Muses, as long as the worship of Jupiter Hospitalis continued. Athenæus, however, did not regard it as a true Pæan, because the characteristic exclamation *Io Pæan* did not occur in any part of it.

The

The *third*, and last *Class* of *Scolia*, concerning which I shall speak, was upon common and miscellaneous subjects, peculiar to no age or country. The greatest number, and the best of these, were upon love and wine. *Love inspires Music and Poetry*; this was a memorable maxim among the Greeks, and the subject of one of Plutarch's *Symposiacs* (*f*).

Scolia written by the greatest Poets of antiquity, are mentioned by ancient authors; and Athenæus has preserved specimens and fragments of a great number. It must, however, be owned, that most of them appear now to be unmeaning and insipid. And Athenæus, either has not selected them with taste and judgment, or it would encourage a belief that the genius of the Greeks could not stoop to elegance in trifles. Indeed, with respect to Songs upon the subjects of love and drinking, those of *Anacreon* have been long regarded as standards of excellence. They are distinguished, by their native elegance and grace, from every other kind of poetical composition; and the voluptuous gaiety of all his songs is so characteristic, that his style and manner have had more imitators than Pindar. *Anacreontics* are expected to be as joyous and sportive, as Pin-

(*f*) The reasons which he alleges in proof of this passion giving birth to Verse and Melody, suit still better with *Song*, in which both are united, than with mere Music or Poetry.

"Love, says he, like wine, inspires vivacity, cheerfulness, and passion; and in these dispositions it is natural to *sing*, and to give energy and emphasis to our expressions. Besides, adds he, when any one is in love, he naturally uses a figurative and measured language, in order to enforce his sentiments, as gold is used in embellishing statues. Whenever a beloved object is mentioned, her perfections and beauties are published in *Songs*, which impress them in the memory in a more lively and durable manner. If we send our mistress either letters or presents, we try to augment their value, by a copy of *verses*, or a *Song*. In short, continues Plutarch, from Theophrastus, there are three provocatives to *Song*; pain, joy, and enthu-

siasm. During pain, our complaints are expressed in lengthened tones which resemble those of Music: thus the voice of an orator, humbly bespeaking, in his peroration, the favour of an audience, is modulated into a kind of *Song*; as is the sorrow and lamentation of actors in tragedy. Joy causes violent agitations, and stimulates the vulgar to skip and dance; while persons more decorous, and better educated, are inclined to *sing*. Enthusiasm agitates and transports to a degree of madness and fury, witness the cries of the Bacchanals, and the agonies of the Pythia, both of which are uttered in measure and cadence. Now there can be no doubt but that the passion of love occasions exquisite pain, as well as pleasure. This passion, therefore, concludes the philosopher, uniting all the three propensities of *Song*, must at all times have been regarded as the most proper to excite a desire of *singing*."

darics.

darics daring and sublime. “His smiling and flowery images, says M. de la Nauze (g), are the more certain to please, as they are all selected with taste and discernment, and faithfully copied from nature.” Much less can be said, however, in behalf of the moral purity of his sentiments; for it must be owned, that their licentiousness is the more dangerous, in proportion to the art and insinuating delicacy with which they are cloathed.

Unfortunately, the miscellaneous and moral Scolia have the least merit of all those that are preserved in Athenæus. Indeed, the simplicity of many of them will not bear an English dress, unless it be very much laced and embroidered by the translator; for so little of the ancient genius of Greece appears in them, that nothing but a mixture of modern poetical images is likely to procure them a perusal. The following Scolium, for instance, when literally and fairly translated, can afford no pleasure to a modern reader. “Son of Telamon, warlike Ajax! They say you are the bravest of the Grecians who came to Troy, next to Achilles (h).”—And this is called a *Song*!

Nor is either the poetry or morality very exalted of this: “He who does not betray his friend, has great honour both with Gods and men—in my opinion (i).”

To pursue this subject through all the different classes of Poetry, that might be comprehended under the word *Scolia*, belongs more immediately to a history of Poetry, than of Music; especially as the Melodies to which they used to be sung have been so long irretrievably lost, that nothing seems left to say concerning them, that can afford musical enquirers the least satisfaction.

H I S T O R Y OF THE MUSIC of the ROMANS.

IN describing the Music and musical instruments of the Greeks, those of the Romans have been included; yet, in order to preserve a kind of historical chain, and to connect distant times together, it is as necessary to give a chapter to Roman Music, as, in visiting distant regions, it is, sometimes, to pass through large tracts of desert country, in order to arrive at places better worth examining. But though the Romans were obliged to the Greeks for most of their arts, sciences, and refinements; yet, as there is no country so savage, where men associate together, as to be wholly without Music, it appears that the Romans had in very high antiquity a rude and coarse Music of their own, and had imitated the Etruscan Musical Establishments, both in their army and temples.

Dionysius Halicarnassensis (a), speaking of the antiquity of the Pelasgians, the inhabitants of Falerii and Fescennia, two ancient cities of Etruria, built in the Greek form, says, “the manner of their religious ceremonies was the same as those of Argos. Holy women served in the Temple, and a girl unmarried, called *Canephoros*, or basket-bearer, began the sacrifice, besides *Choruses* of virgins, who hymned the Goddess in songs of their country.” Now as the

(a) *Lib. i.*

Romans had an earlier communication with the Etruscans than with the Greeks, this passage renders it very probable that they were obliged to the people of Etruria for their religious ceremonies, and for *vocal Music* (b). And the same author informs us, that “the Arcadians were the first who brought into Italy the use of Greek letters (c), and *instrumental Music*, performed on the Lyre, and those instruments called the Trigon and the Lydian (d): for the shepherd’s pipe was the only instrument in use before that time. They are said, also, to have instituted laws; to have brought mankind over from the savageness which then generally prevailed, to a sense of humanity; and likewise, to have introduced arts and sciences, and many other things conducive to the public good.—This was the second Greek nation, that came into Italy after the Pelasgi; and living in common with the Aborigines, fixed their habitation in the best parts of Italy (e).”

Dionysius likewise says (f), many old authors asserted that Romulus and Remus, after they were weaned, were sent by those who had the charge of their education to Gabii, a town not far from Palatium, to be instructed in Greek learning; and that there they were brought up by some persons with whom Faustus the shepherd had a private intercourse of hospitality,

(b) Strabo, *de bello Punico*, says in express terms, that the public music, especially such as was used in sacrifices, came from Etruria to the Romans. See also Livy, *lib.* xxxix.

(c) The late Mr. Spelman, whose translation is used here, was of opinion, as many others have been, that the Roman language was originally Greek. And as the Arcadians were one of the first Greek colonies that settled in Italy, the Æolic dialect must have been brought thither by them. Mr. Spelman in proof of this opinion compares the following words of the Latin language with its mother Greek: *Fama*, φάμα; *plaga*, πλάγα; *machina*, μηχανή; *malum*, μάλον; *mater*, μάτηρ; *tu*, τυ. And yet, though many more instances are

to be found of Greek words incorporated in the Latin language, they no more prove it to have been originally Greek than those to be found, in perhaps greater number, in the English language, will give to our tongue so honourable an origin. The Romans had an intercourse with Greece, and an acquaintance with the literature of the Greeks, long before the time of Dionysius, and in adopting their arts they could not help adopting the language in which they received them from the original inventors.

(d) This was probably an instrument for which the Greeks were indebted to their Asiatic neighbours, the Lydians.

(e) Dionysius Halic. *Antiq. Rom. lib.* i.

(f) *Ibid.*

and

and where they employed their time, till they arrived at manhood, in literature, *Music*, and the use of Greek arms.

Plutarch (g) mentions it as a prevailing opinion, that the Greek language which was spoken by the Romans in the time of Romulus, was not corrupted by Italian words. From these accounts it appears that the Romans had not only vocal and instrumental music as well as other arts and sciences from Greece, but even their alphabet, language, religion, and all the learning of which they were possessed during the time of their kings, and the first ages of their republic, these having been originally Greek, though the Romans had them through Etruscan strainers.

The first Roman triumph, according to Dionysius (h), was that of Romulus over the Cæninenses; in which, clad in a purple robe, he was drawn in a chariot by four horses. The rest of the army both horse and foot followed, ranged in three several divisions, *Hymning* their gods in songs of their country, and celebrating their general with *extemporary Verses*: this account affords a very venerable origin to the *Improvvisatori* of Italy; as the event happened in the fourth year of Rome, 749 years before Christ, and fourth year of the seventh Olympiad.

The same author says that the Roman prætors, in worshipping the Idæan goddess, performed annual sacrifices and celebrated annual games in her honour, according to the *Roman, not Grecian*, customs: though the priest and priestess of the goddess were Phrygians. These carried her image in procession about the city, asking alms in her name, according to their custom, and wearing figures upon their breast, and striking their *Cymbals*, while their followers *played Tunes* upon their Flutes, in honour of the mother of the gods.

These are the chief instances to be found in ancient history of original *Roman Music*; or at least of music that was not im-

(g) *Vita Romuli.*

(h) *Lib. ii.*

mediately derived from Greece. M. Rousseau, speaking of the *Scolia*, or Grecian Songs, says, "This kind of songs passed from the Greeks to the Romans, and many of the odes of Horace are Bacchanalian and love songs. But this nation, more military than sensual, for a long while made but a very mean use of Music and songs, and never approached in these particulars the voluptuous grace and elegance of the Greeks (i). It seems as if Melody always remained in a coarse and rude state among the Romans. Their Hymenæal odes were rather noise and clamour than songs, and it is hardly to be presumed that the satirical songs of the soldiers, in the triumphs of their generals, consisted of a very agreeable melody (k)." I shall, however, endeavour to trace the progress of Music among the Romans, by collecting the chief passages to be found in their best historians, relative to the subject.

Numa began his reign in the middle of the sixteenth Olympiad, 715 years before Christ, about the time when Pythagoras was in Italy. And, according to Dionysius, the sixth branch of his religious institutions was the establishment of the *Salii*, whom Numa himself appointed out of the patricians, choosing twelve young men of the most graceful appearance. These *Salii* were a kind of dancers and singers of hymns in praise of the god of war. The festivals were celebrated about the time of the Panathenæa at Athens, in the month of March, and at the public expence; they continued several days, during which they proceeded dancing through the city to the Forum, and the Capitol, and to many other public and private places, beating time upon the *Ancilia*, or sacred shields (l). The Romans called them *Salii* from their violent motions. And, for the same rea-

(i) It has been shewn, however, in the preceding chapter, that though the Greeks had many elegant Lyric Poets, and numbered Sappho and Anacreon among the writers of songs upon the subjects of love and wine, yet some of their vulgar and popular *Scolia* seem to have been furnished

with as little Poetry, grace, and refinement, as the Roman *military* Pæans.

(k) *Dict. de Mus.* art. CHANSON.

(l) This performance must very much have resembled that of modern morrice or morisque dancers.

son, they called all other dancers *Saltatores*, because their dancing, also, was attended with frequent springing and leaping, in imitation of the *Salii* (*m*): "In the motions which they perform in arms, keeping time to a Flute, says Dionysius, sometimes they move altogether, sometimes by turns; and in dancing, sing certain Hymns, after the manner of their country (*n*). They seem to be the same as the Greek Curetes."

Servius Tullius, who began his reign 578 B. C. in forming the people into classes and centuries, is related by the Roman historians to have ordained that two whole centuries should consist of *Trumpeters, blowers of the horn, &c.* and of such as, *without any other instruments, sounded the charge* (*o*). This shews the number, and the importance of military Musicians in the Roman state near 600 years before Christ.

And in the laws of the Twelve Tables, instituted about the time that the power of the Decemvirs was abolished, 450 B. C. among those concerning religious rites, we find the two following:

I. Let the cryer proclaim the funeral. Let the master of the funeral, in the games, make use of a public officer, and lictors. Let it be lawful for him to make use of three square mantles in the funeral, a purple fillet for the head, and *ten players on the Flute*. Let him do no more than this (*p*).

(*m*) The modern Italians are still fond of *Saltatori*, and employ them in their Operas.

(*n*) This account affords no very splendid idea of the Roman dancing, any more than it does of their Music. Singing and dancing together during such violent exertions of activity and agility, must have infebled both.

XII. Let the praises of honoured men be displayed in an assembly of the people; and let mournful Songs, accompanied with a Flute, attend those praises (*q*).

According to Servius, Macrobius, and Horace, Nuptial Songs, which were afterwards refined and polished into Epithalamiums, were first used by the people of Fescennium, a city of Etruria, and therefore called *Versus Fescennini*. This kind of Poetry, in its original, was gross and obscene, though long authorized by custom. Young people, instead of throwing the stocking, in the manner of our villagers, sung the *Fescennia* before the apartment of the new married pair.

Livy (*r*) gives a kind of history of the Roman Drama, which, as well as the Grecian, was inseparable from Music. The passage is so full and curious, that I shall insert it entire.

“ The plague continued, says Livy, to rage this year (*s*), and the following, during the consulate of C. Sulpicius Petiscus, and C. Licinnius Stolo. The most remarkable occurrence during this period was, that, in order to obtain mercy of the Gods, a public feast called *Lectisternium* was celebrated for them, which was the third entertainment of this kind that had been made since the building of the city (*t*). But the magistrates finding that the violence of the pestilence was neither abated by human prudence nor Divine assistance, and having their minds filled with superstition, among other means which

(*r*) *Lib. vii. cap. 2.*

(*s*) 364 B. C.

(*t*) The word *Lectisternium* is derived from *sternere*, to spread or make, and *lectus*, a bed. The statues of the Gods were taken down from their niches, and laid on

beds, placed about a table, and covered with magnificent carpets, purple cushions, and hangings of tapestry. *Duumviri*, *Triumviri*, and in process of time *Septemviri*, named *Epulones*, presided at these feasts, and eat the meat that was served up before the statues. Yet not by stealth, in the sneaking manner that was practised at Babylon, by the priests of Bel (see History of *Bel and the Dragon*) but openly, and in the face of day. In the first of the three beds lay Apollo, Diana, and Latona; in the second, Hercules and Mercury, and in the third, Neptune.

were

were tried in order to appease the incensed Deities, they are said to have instituted the games called *Scenici* (u), which were amusements entirely new to a warlike people, who, before this time, had none but that of the Circus. These theatrical representations, like the beginnings of most other things, were at first inconsiderable, and borrowed from foreigners: for actors were sent for from Etruria, who, without verses, or any action expressive of verses, danced, not ungracefully, after the Tuscan manner, to the Flute. In process of time the Roman youth began to imitate these dancers, intermixing raillery in unpolished verses, their gestures corresponding with the sense of the words. Thus were these plays received at Rome, and being improved and refined by frequent performances, the Roman actors acquired the name of *Histriones*, from the Tuscan word *Hister*, which signifies a stage-player. But their dialogue did not consist of unpremeditated, and coarse jests, in such rude verses as were used by the *Fescennini*, but of satires, accompanied with Music, set to the Flute, and recited with suitable gestures (x). And some years after, Livius Andronicus first ventured to abandon satires, and write plays with a regular and connected plot (y). After satires, which had afforded the people subject of coarse mirth and laughter, were, by this regulation, reduced to form, and acting, by degrees, became an art, the Roman youth left it to players by profession, and began, as formerly, to act farces at the end of their regular pieces. These dramas were soon after called *Exodia*, and were generally interwoven with the *Atillane* comedies (z).

(u) These scenic shews took their name from the Greek word *σκηνή*, which signifies a shady place, or arbor, made with branches or boughs of trees, with which the ancients covered their stages. Afterwards, the scene of the theatre of the ancients implied all those buildings which were represented to the spectators on the stage, when it was adorned with such decorations as Vitruvius calls *scenae*.

(x) These *Satura* or *Satira* were a kind of wild, miscellaneous drama, without regular plot, or subject. The reader may see the word well explained in an elegant note of Mr. Harris's *Philosophical Arrangements*, p. 460.

(y) See *Dissert.* p. 159.

(z) *Atilla*, according to Cluver, was situated near Aversa, in Campania, between Capua and Naples.

They

They were borrowed from the *Ofci* (a), and always acted by the Roman youth, who would not allow them to be disgraced by professed actors. Hence it has been a rule for those who performed in such pieces not to be degraded from their tribe, and they were allowed to serve in the army as if they never had appeared on the stage."

The circumstance of these plays having been first represented on account of the plague, proves theatrical exhibitions to have been originally *religious institutions* among the Romans, as well as the ancient Greeks; and the importance of Music in religious ceremonies is put out of all doubt by another curious passage in Livy (b), where he has recorded the effects of resentment in the Roman Musicians, who used to perform at sacrifices, and who, upon an imaginary affront, left the city in a body. The relation of the historian seems to merit a place here, without abridgment.

"I should omit a circumstance, says he, hardly worth mentioning, if it did not seem connected with religion. The *Tibicines*, or Flute-players, taking offence at the preceding censors refusing them the privilege of eating in the Temple of Jupiter, according to traditional custom, withdrew in a body to Tibur (c), so that there were no performers left to play before the sacrifices. This created religious scruples in the minds of the senators, and ambassadors were sent to Tibur to endeavour to persuade the fugitives to return to Rome. The Tiburtines readily promised to use their utmost endeavours to this end, and first summoning them before their senate, exhorted them to return to Rome; but finding them deaf to reason or intreaty, they had recourse to *an artifice well suited to the dispositions of these men*. For upon a certain festival, they were all invited

(a) The original inhabitants of Campania. They were anciently called *Opisci*, and, by contraction, *Ofci*; whence, say the Etymologists, the word *Obscænus* came, as these people had the character of being as licentious in their discourses, as they

were loose in their manners. Tacitus tells us that some pieces called *Atillanae*, written in the spirit and language of the old *Ofci*, were acted in his time.

(b) *Lib. ix. cap. 30.*

(c) *Tivoli.*

by different persons, under pretence of their assisting in the celebration of a feast. As men of this profession are generally much addicted to wine, they were supplied with it, till being quite intoxicated, they fell fast asleep, and in this condition were flung into carts, and carried to Rome; where they passed the remaining part of the night in the Forum, without perceiving what had happened (*d*). The next day, while they were full of the fumes of their late debauch, upon opening their eyes they were accosted by the Roman people, who flocked about them, and having been prevailed upon to stay in their native city, they were allowed the privilege of strolling through all the streets in their robes (*e*), three days in every year, playing upon their Instruments, and indulging themselves in those licentious excesses which are practised upon the same occasion to this day (*f*). The privilege of eating in the temple was also restored to such of them as should be employed in playing before the sacrifices." This adventure happened 309 years B. C. while the Romans were preparing for two very dangerous wars (*g*).

(*d*) The Tibicines were frequently celebrated by ancient writers, not only for their love of good cheer, but for their corpulency. Virgil, *Georg.* ii. 193. says, *Inflavit cum Pinguis ebur Tyrrhenus ad Aras.*

When the fat Tuscan's horn has call'd the God,

This, according to the commentators, and old scholiasts, was owing to the good dinners they obtained at sacrifices. And as the Greeks had a proverb, see p. 425. relative to persons of this profession living at the cost of others, so, *to run about like a Flute-player*, was a proverbial expression, among the Romans: *Transire Tibicinis Latini modo*—says Cic. *pro Muræna*; from their attendance at different sacrifices on Festivals.

(*e*) These Musicians had a long gown peculiar to their profession; Horace speaks of their trailing it along the stage (*Art. Poet.*) and this is what Ovid means by the *stola longa*.

VOL. I.

(*f*) Livy was cotemporary with Augustus. Ovid, *Fasti*, Lib. vi. relates the same story, and tells us further, that the Tibicines celebrated the anniversary of their return to Rome on the 13th of June; at which time they disguised themselves in women's apparel, and marched through the streets in procession to the Temple of Minerva, inventress of the Flute, and protectress of such as played upon it, singing jovial Songs. *Et canere ad veteres verba jocosa modos.* See, likewise, Plutarch's *Roman Problems*.

(*g*) The Roman Flute-players were incorporated and formed into a College, or Company, and had, it may be imagined, their *Common-Halls*, or meetings, their bye laws, and privileges. Val. Max. Lib. ii. cap. 5. and Plut. in *Numa*, both speak of the College of Pipers. Ovid likewise has expressed their importance, and different provinces in the *Temple*, the *Theatre*, and at *Funerals*, in the following lines,

Q 1 1

Temporibus

But notwithstanding the importance of these Flute-players to the celebration of religious rites, Music seems to have arrived at no very great degree of refinement or perfection, or to have been much in use on other occasions, till after the conquest of Antiochus the Great, King of Syria; and it is mentioned by Livy (*h*), as a memorable æra of luxury, that the custom was then first introduced at Rome of having *Psaltria*, or female Musicians, to attend and perform at feasts and banquets in the Asiatic manner (*i*).

Indeed the Romans were later in cultivating Arts and Sciences, than any other great and powerful people; and none of them seem to have been the natural growth of the soil, except the art of war; all the rest were brought in by conquest. For it has been shewn already, that before their acquaintance with the Greeks they had all their refinements from the Etruscans, a people very early civilized and polished. Cicero, in his second Book of Laws, tells us that before Greece and her arts were well known to the Romans, it was a custom for them to send their sons for instruction into Etruria. And thence they had the first ideas, not only of Religion, but of Poetry, Painting, and Music, according to the confession even of their own historians.

With respect to Etruscan Music, whoever regards the great number of instruments represented in the fine collection of antiquities published under the patronage and inspection of Sir William Hamilton, as well as in that lately published at Rome by Passerio, must be convinced that the ancient inhabitants of Etruria were extremely attached to Music; for every species of musical instrument that is to be found in the remains of

(*i*) *Psaltria* was a general appellation for a girl that sung, and played upon some stringed-instrument: a Minstrel. And the luxury of which Livy complains, was the addition of this entertainment to feasts; *Addita epulis.* See p. 429.

ancient

ancient Greek sculpture is delineated on the vases of these collections; though the antiquity of some of them is imagined to be much higher than the general use of the instruments represented upon them was, even in Greece.

Yet, with all the advantages of vicinity to Etruria, and intercourse with its inhabitants, it is well known how ignorant the Romans were of Painting, Sculpture, and all the fine arts, long after they were arrived at the highest perfection in Greece. For when Mummius had put Rome in possession of some of the finest productions of art which had rendered Greece so famous, after laying waste a great part of that country, and, like a true barbarian, wantonly burning Corinth, the capital of Achaia, though he entered it without resistance; this rude conqueror, according to Pliny, being offered by king Attalus 600,000 sesterces, a sum equal to 4843*l.* 15*s.* for a picture of Bacchus painted by Aristides, had so little of the connoisseur about him, that imagining the picture must contain some secret virtue, by the price that was set on it, would not part with it, but sent it to Rome among other spoils: exposing, however, his own ignorance in these matters by telling the commander of the ship, that he had best take care of this piece, for if it was either lost or spoiled, he should oblige him to furnish such another.

Besides the obligations which the Romans had to the Etruscans and Greeks for their taste and knowledge in the fine arts, the conquest of Sicily 200 years before the Christian *Æra*, contributed greatly to their acquaintance with them. Indeed there was no state of Greece which produced men of more eminence in all the Arts and Sciences, than Sicily, which was a part of *Magna Græcia*, and which having been peopled 719 years B. C. by a colony of Greeks from Corinth, their descendents long after cherished and cultivated Science of all kinds, in which they greatly distinguished themselves, even under all the tyranny of government with which they were oppressed. Fa-

bricius (*k*) gives a list of 70 Sicilians who have been celebrated in antiquity for learning and genius, among whom we find the well known names of Æschylus, Diodorus Siculus, Empedocles, Gorgias, Euclid, Archimedes, Epicharmus, and Theocritus. To the Sicilians is given not only the invention of Pastoral Poetry, but of the Wind Instruments with which the shepherds and cowherds used to accompany their rural Songs.

After the conquest of Greece, the Romans had the taste to admire and adopt the Grecian arts. And the president Montesquieu remarks, with respect to the military art, that one of the chief causes of the Roman grandeur, was their method of abandoning their ancient customs, and adopting those of the people whom they had vanquished, whenever they found them superior to their own (*l*).

In the time of Cicero, though the chief part of Greece was subdued by the Romans, and rendered tributary to them, yet the Greeks preserved a kind of sovereignty over the minds of their masters; and the greatest of the Romans, even of consular dignity, whose power was so unbounded in the several provinces under their command, chearfully submitted to go to school at Athens, and to become disciples of Greek tutors, in philosophy, mathematics, and the polite arts.

During the reign of Augustus, except Vitruvius, it does not appear that the Romans had one Architect, Sculptor, Painter, or Musician: those who have been celebrated in the arts at Rome, having been Asiatics, or European Greeks, who came to exercise such arts among the Latins, as the Latins had not among themselves: this custom was continued under the successors of Augustus, and those Romans who were prevented by more important concerns from going into Greece, contrived in a manner to bring Greece to Rome, by receiving into their ser-

(*k*) *Bib. Græc.* Vol. xiv. p. 27.

(*l*) On doit remarquer que ce qui a le plus contribué à rendre les Romains les maîtres du monde, c'est, qu'ayant combattu

successivement contre tous les peuples, ils ont toujours renoncé à leurs usages sitôt qu'ils en ont trouvé de meilleurs. *Grand. et Decad. des Romains, chap. 1.*

vice the most able professors of Greece and Asia, in all the arts. We find too, not only that each of the best Roman writers was an imitator of some great Grecian model, but are certain that the finest remains in painting, sculpture, and architecture, which still subsist in Italy, were either brought thither from Greece, or were the works of Greek artists, who had left their own ruined and oppressed country, to bask in the warm sunshine of power and affluence, at Rome.

It cannot be dissembled, or passed over in silence here, that arts and sciences have been frequently charged with contributing to precipitate both the Roman and Grecian states into ruin, by rendering the minds of the people effeminate, involving the Great in idle and useless expence and luxury, and by calling off their attention from military and political concerns, which alone can acquire and preserve dominion. In the infancy of a state, or in times of danger and calamity, this may be true: but that man was designed for no other purposes than to enslave or destroy his fellow creatures, or to live a gloomy life of inanity and penance, never composed a part of my creed. A nation become affluent by conquest and commerce, must have amusements in time of peace. The question is, whether these amusements shall be merely corporeal and sensual, or whether elegance, refinement, and mental pleasure, shall bear a part in them (*m*)? Another question may still be asked: whether any other efforts of Greek and Roman genius are still so much admired and imitated, as those which are seen in the remains of their works in literature and the polite arts?

It is difficult to acquire wealth by fair means, but it is much more difficult to use it rationally. And, in our own country, and times, there are at least ten men who have talents of accumulation sufficient to amass great riches, to one who distributes

(*m*) *L'Amusement est un des besoins de l'homme*, says M. de Voltaire. The first consideration with a legislator is, that this

amusement should be innocent: the next, that it be not below the dignity of a rational creature.

them

them among his fellow citizens, with benevolence, taste, and judgment.

Permanence is not allowed to human institutions : and the longevity of a state has its bounds, as well as the life of man. It is more consonant with our duty to endeavour, than with experience to expect to keep all corruption and depravity from our own. The Spartan virtue, and self-denial, could not preclude them.

The cultivation of Arts and Sciences in a great and flourishing kingdom is expected by its neighbours, and a debt to posterity. It was long the fate of our own country, like that of the ancient Romans, to admire the polite arts more than to cultivate them. We imported the productions of foreign painters, sculptors, and musicians, at an enormous expence, without conceiving it possible to raise a school for the advancement of those arts at home. With respect to the two first, all Europe now allows that genius, diligence, and travel, under the auspices of royal protection and public patronage, have made wonderful strides within the last ten years towards perfection, and the forming a school in our own country ; but, as for Music, we have little that we can call our own, and though more money is expended upon this favourite art in England, than in any other kingdom upon the globe, we acquire by it neither honour from our neighbours, nor profit to our natives. Both take wing together ! and without a scarcity of genius for contributing to the pleasures of the ear, we purchase them with as little necessity as we should corn at a dear and foreign market, while our own lands lay fallow.

With respect to the musical instruments used by the Romans, as they invented none themselves, all that are mentioned by their writers, can be traced from the Etruscans and Greeks, Indeed the Romans had few authors who wrote professedly upon the subject of Music, except St. Augustine, Martianus Capella, Boethius, and Cassiodorus ; who, though they lived
in

in the decline of the empire, yet made use of Greek principles, and explained those principles by Greek musical terms (*n*).

Vitruvius, in his Treatise upon Architecture, has inserted a chapter upon Music, in which he has given the Harmonical System of Aristoxenus; but he introduces it with a complaint of the unavoidable obscurity of musical literature, on account of the deficiency of terms in the Latin tongue, to explain his ideas. "The science of Music, in itself obscure, says he, is particularly so to such as understand not the Greek language (*o*)."

This writer, therefore, who seems to have been the first that had treated of Music in the Roman language, confesses the necessity he was under of using Greek appellatives, not only for the notes, but for other parts of the art; which shews, if not the low state of Music at Rome when he wrote, which was in

(*n*) *St. Augustine* was born in Africa, A. C. 354, and died 430. Besides the six books written by him upon Music, which are printed in the fol. edition of his works at Lyons, 1586, there is a MS. tract of his writing, in the Bodleian Library at Oxford, entitled *De Musica*; but it is nothing more than a sermon in praise of Church Music, nor do his six books contain any other rules than those of Metre and Rhythm.

Martianus Capella, who flourished in 470, was likewise an African. He, as well as *St. Austin*, wrote upon the Seven liberal Arts. His ninth Book, the only one which concerns Music, has been commented by *Meibomius*, at the end of the third Book of *Aristides Quintilianus*, from whom it is almost wholly taken, blunders and corruptions excepted. Yet, however deficient *Martianus Capella* may appear in the eyes of musical enquirers, *Hugo Grotius*, at the age of sixteen, chose the book of this author as an exercise for his critical talents, and published it with a dedication to the prince of Condé, at Leyden, 1599.

Boethius was born at Rome, in 470, and put to death by order of *Theodoric*, the Goth, in 525. He wrote five books on Music, which were first printed in

black letter, with his Treatises on Arithmetic and Geometry, at Venice, 1499. I am greatly obliged to the unsolicited kindness and liberal communication of *Dr. Jos. Warton*, for a long possession of this rare edition, as well as for a very scarce Treatise by *Franchinus Gafforius*, of equal antiquity. It is remarkable, that in this copy, the Greek of the famous *Senatus-Consultum*, against *Timotheus*, at *Lacedæmon* is omitted; though I found it in a beautiful MS. of *Boethius*, *De Musica*, 15 B. ix. of the 11th century, in the British Museum, where the word *ὑαυπονία* occurs, in the same manner as it is printed in the Oxford edition of *Aratus*. See *Dissert.* p. 45, and 407.

Cassiodorus flourished in the time of *Theodoric*, in the 6th century, and died in 562, at the age of 93. He wrote of the Seven liberal Arts, *De septem Disciplinis*. The whole of his musical work, which is hardly the skeleton of a treatise, is a repetition of what his predecessors have said on the subject, and all these Latin Musical Treatises are but bullets of the same caliber. They teach no part of Music but the alphabet, nor can any thing be acquired by the most intense study of them, except despair and the head-ach.

(*o*) *Lib. v. cap. 4.*

the

the Augustan age, at least, whence their Music came; and *borrowing* implies *inferiority*. Indeed, the writings of Cicero shew that philosophy, and all the arts and sciences, were wholly furnished to the Romans from Greece, even in the most enlightened times.

Music was, however, in great favour at Rome, during the latter end of the republic, and the voluptuous times of the emperors; the stage then flourished; the temples were crowded; festivals frequent; and banquets splendid: so that we may suppose it to have been very much used both upon public and private occasions, in so rich, populous, and flourishing a city as Rome, the mistress of the world. But this Music must have differed as little from that of the Greeks, as the descriptions of it in Horace and Virgil differ from those to be found in Homer, and the Greek Lyric Poets. A passage in Cicero (*p*) would incline us to imagine that the laws of contrast, of light and shade, of loud and soft, of swelling and diminishing sounds, were understood by the Musicians of his time, as well as by those of the present. For, after speaking of the use of *contrast* in oratory, poetry, and theatrical declamation, he adds: "even Musicians who have composed Melody, have known its power; as is manifest from the care they take to lessen the sound of instruments, in order to augment it afterwards: to diminish, to swell, to vary, and to diversify (*q*)."

It is imagined too, that ancient vocal Music had its *Ritornels*, or *Symphonies* (*r*), which were expressed by the term *Mesaulicis*, a figurative word, implying an entry or passage, leading to something else (*s*).

And according to Apuleius, who discovers himself in many parts of his writings to have been an excellent judge of Music, it

(*p*) *De Oratore*, lib. iii.

(*q*) *Quàm denique illi etiam qui fecerunt modos, à quibus utrisque summittitur aliquid, deinde augetur, extenuatur, inflatur, variatur, distinguitur.*

(*r*) *Mesaulici Toni*. See Marpurg's *Kritische Einleitung in die Geschichte der Musik*, p. 192.

(*s*) *Vitruv*, lib. vi. cap. 10.

must have been much cultivated, and well understood, in his time, which was the second century. He describes the several parts of a musical entertainment in the following manner: "She ordered the Cithara to be played, and it was done: she asked for a concert of Flutes, and their melodious sounds were immediately heard: she lastly, signified her pleasure that Voices should be joined to the instruments, and the souls of the audience were instantly soothed with sweet sounds (t)."

The same author (u), likewise, describes a musical performance at the celebration of a great festival in honour of Ceres, or Isis, at the time of his own initiation into the Eleusinian Mysteries, in such a manner as would suit many modern performances.

"A band of Musicians now filled the air with a melodious concert of Flutes and Voices. They were followed by a chorus of youths, dressed in white robes, suitable to the solemnity, who alternately sung an ingenious Poem, which an excellent Poet, inspired by the Muses, had composed, in order to explain the subject of this extraordinary festival. Among these marched several players on the Flute, consecrated to the great Serapis, who performed many airs dedicated to the worship of the God in his Temple. After this, the venerable ministers of the true religion, shook with all their force the Sistrums of brass, silver, and gold, which produced tones so clear and sonorous, that they might have been heard at a great distance from the place of performance (x)."

(t) *Metam. lib. v.*

(u) *Ibid. lib. xi.*

(x) That Music was both cultivated and heard in some ages of antiquity, with a greater degree of enthusiasm than others, is certain; and it is equally difficult to resist the torrent of eloquence and panegyric with which its effects are described by respectable historians or philosophers, and to refrain from a seeming credulity concerning its powers; but though I am not convinced that the ancient Music with

VOL. I.

respect either to Harmony, or Melody, in their present acceptation, was equal to the modern, yet I can easily believe that, with the assistance of Poetry, religious veneration, the pomp of public exhibition, joined to native sensibility and passion in the hearers, great effects may have been produced by this Music, whatever it was, and however it may essentially have differed from our own.

In speaking, therefore, of a Musician of past times, as it has been my constant

R r r

rule

As Apuleius, after Lucian, whom he imitates, lays the scene of his *Metamorphosis* in Greece, we may imagine that his ideas of Music and musical performances were Greek. One great impediment to the progress of Music among the Romans, was that they wholly abandoned to their slaves the practice of the liberal arts; and the greater their talents, the more severely were they in general treated. Whereas the Greeks, on the contrary, confined the exercise of those arts, as the epithet *liberal* implies, to *free men*, and persons of birth and rank, forbidding their slaves the study and use of them. Whence it is easy to imagine which of these two nations would bring them to the greatest degree of perfection.

“What nature was to the Greeks, says the Abbé Gedoy (x), the Greeks were to the Romans, as the natives of Greece had no other example than nature herself to follow, for no nation, with which they had any intercourse, was learned and policed before them. The Romans, on the contrary, had the Greeks for models.” This representation is not to be admitted without reserve. For the first learned Greeks, as has been already shewn, had travelled into Egypt; and the first Romans had received information, upon several subjects, from Etruria, and even from Sicily, before the conquest of Greece. It is

rule to compare him with his cotemporaries; so in describing the Music in general of remote ages of the world, it has been my wish that the reader should mount up to each particular period of which I write, and consider the Music of antiquity as relative to the knowledge and ideas of those who heard it. Nothing is more certain, than that the best Music of the time, in all ages, has greatly delighted its hearers. But notwithstanding the great difference between that of one age and another, the same terms have been constantly used in describing it. However, from a *similitude* of description, we must not infer a *similitude* of the thing described. Words are vague and fallacious; and the excla-

mations, *admirable! fine! exquisite!* represent nothing fixed or certain. The utmost weight we ought to give them, is to suppose that the Music or Musician, upon which they were bestowed, was the *best within the knowledge of the writer*. This kind of merit is all comparative. No terms can be devised to express the last refinements, and even excesses of opera singing, more strong than those which Strada uses to describe the musical refinements of the sixteenth century. Yet, if examples of these refinements could now be heard, their dissimilitude would sufficiently prove the fallacy of verbal description.

(x) *Mem. de Litt.*

true,

true, that from the period of their conquest of that country, may be dated the rapid progress they made in luxury, and their admiration of the fine arts. About the year 601 of the city, and 153 B. C. the Romans saw their first Poets flourish, such as Nævius, Livius, Andronicus, Ennius, Accius, Pacuvius, and Lucilius.

They were long more renowned as a military, than an elegant and learned people. At length, however, they imitated the Greeks in the institution of musical and poetical contests, at their public Games; but it was not till the time of Augustus, that the glory of their writers, in prose and verse, bore any proportion to that of their military commanders. In the times of the emperors, who reigned before the establishment of the Christian religion, the Greeks and Asiatics were servilely imitated by the Romans, not only in the liberal arts, but in all those of luxury and refinement, particularly in public shews and games, with which the people were amused by their tyrants, who endeavoured to make them forget, during these expensive moments of idleness and dissipation, the slavish and degenerate state to which they were reduced.

Nero, in the year 60 after Christ, instituted exercises of Music, Poetry, and Eloquence, to be performed at Rome every 5th year. In the 63d year A. C. he mounted the stage himself at Naples as a public singer. This was his first appearance as a strolling Minstrel. His second was in Greece, in 66, where he pretended, in imitation of Flamininus, to restore to the Grecian States their ancient liberties. After entering the lists with common musicians at the Olympic Games, and acquiring the prize of Music by corrupting the judges or his competitors, he travelled through Greece, not prompted by the laudable curiosity of visiting the antiquities of that once celebrated country, but by the low ambition of displaying his skill in singing and playing upon the Cithara. He every where challenged the best performers, and, as may be imagined, was always declared vic-

tor. And that there might remain no memorials of other victors, he commanded all their statues to be pulled down, dragged through the streets, and to be either broken in pieces, or thrown into the common sewers (y).

At his return from Greece he entered Naples, Antium, Albanum, and Rome, through a breach in the wall of each city, as an Olympic victor, carrying with him in triumph, like spoils of an enemy, 1800 prizes which he had extorted from the judges in musical contests: in the same Car in which kings used to be brought in triumph, who had been vanquished by Roman generals, and with the same splendor, pomp, and solemnity, was Diodorus, a celebrated Greek performer on the Cithara, with other eminent musicians, brought through the streets of Rome, leaving it doubtful, which was the greatest, the vanity of Nero, in imagining himself superior to these professed musicians, or their adulation in confessing themselves to have been vanquished by Nero.

The solicitude with which this emperor attended to his voice, as related by historians, is curious, and will throw some light upon the practices of singers in ancient times. Suetonius informs us, that to preserve his voice, he used to lie upon his back, with a thin plate of lead upon his stomach; took frequent emetics and cathartics; and abstained from all kinds of fruit, and such meats as were thought to be prejudicial to singers; and, at length, from the apprehension of hurting his voice, he ceased to harangue the soldiery or senate, contenting himself with issuing his orders in writing, or by the mouth of some of his friends or freed-men. After his return from Greece, he established about his person a *Phonascus*, or officer, to take care of his voice: he would never speak but in the presence of this vocal governor, who was first to admonish him, when he spoke too loud, or strained his voice; and afterwards, if the emperor, transported by some sudden emotion, did not listen to his re-

(y) Suet. cap. 24.

monstrances,

monstrances, he was to stop his mouth with a napkin. The most effectual means of acquiring his favour was to commend his voice, which, according to Suetonius, was both thin and husky; to pretend raptures while he sung, and to appear dejected and very importunate, if, like many other singers, through caprice he desisted from doing what he himself most ardently desired.

Encouraged by the applause of the multitude, he appeared almost every day on the stage, inviting not only the senators and knights, but the whole populace and rabble of Rome, to hear him, generally in the theatre which he had built in his own palace. He frequently detained the audience not only the whole day, but the whole night: for till he was tired himself, and desisted, no one was on any account suffered to depart: so that women are said to have been delivered in the theatre, and several persons were so tired and disgusted with the performance, that finding the gates of the palace shut, they either leaped over the walls at the hazard of their lives, or counterfeited death, in order to be carried out to their funeral (z). Some by continuing night and day in the same posture were seized with mortal distempers; these, however, they dreaded less than the resentment of the prince, which they would have unavoidably incurred by their absence. Besides the great number of secret observers employed to watch the countenances and behaviour of the audience, there were many open spies, who publicly set down the names of such as discovered the least symptoms of dissatisfaction: the vulgar were instantly punished by the soldiery for the least inattention; and upon persons of rank the vengeance of the emperor was vented in a still more dreadful manner. Vespasian, afterwards emperor, greatly provoked the anger of Nero, by escaping from the theatre during the time of performance: however, fearing the consequences of the offence which he had given, he returned, in order

(z) *Suet.* cap. 23.

to make reparation; but, unfortunately, falling asleep while the emperor was singing, this male syren was so enraged at his inattention, that it would have cost him his life, if his friends, men of the highest rank and merit, had not employed their prayers and mediation in his behalf (a).

The successors of Nero encouraged public games and dramatic representations in all the great cities of the empire. Adrian, who had been educated at Athens, was much attached to Grecian customs, and in a particular manner favourable to that city. In the year 126 A. C. he presided there in the public games: in 132 he instituted new games, and built temples in Egypt to the honour of his favourite Antinous: and in 135 he celebrated at Athens the great Festival of Bacchus. His successor, Antoninus, 142 A. C. likewise instituted new games called *Pia* and *Pialia*, in honour of his predecessor, which were appointed to be exhibited at Puteoli on the 2d year of every Olympiad.

The emperor Commodus, little less a monster than Nero, was equally fond of appearing on a public stage, not only as a dancer and an actor, who of course was a singer, but as a gladiator, a profession which seems to have been peculiar to the Roman thirst of blood. In modern times the duellists plead provocation, and the wounds which honour has received; and in the combats of our own prize-fighters for the amusement of the public, death was not a certain consequence of being vanquished; but the Romans, not content with casting captive kings into dungeons, and deliberately putting them to death after pride and avarice had been satiated, made one of their most delightful amusements consist in seeing the blood of their fellow-creature, and often of their fellow-citizen, spilt on a stage. The public games and contentions which they had from the Greeks, either promoted manly strength and activity, or some ingenious and ornamental art; but the combats of gladiators could only

(a) *Idem. in Vespasiano, cap. 4. Tacit. Annal. Lib. xiv. cap. 5.*

steel the hearts of the spectators, and render them insensible to every feeling of humanity.

Notwithstanding all the assistance which the Romans received from the Greeks in the Polite Arts, and all the encouragement of these institutions, they never advanced so far in them as the modern Italians have done; who, without any foreign help, have greatly surpassed not only their forefathers the ancient Romans, but even the Greeks themselves, in several of the arts, and in no one so much as that of Music, in which every people of Europe have, at different times, consented to become their scholars.

* * * * *

I shall here terminate my enquiries concerning the Music of the ancients, and the present volume; reserving for the next, the History of such Music as more modern times have been delighted with, beginning with its *Introduction into the Church*: and it is hoped that the narrative will become more interesting to the reader in proportion as he advances towards Certainty, and the account of things that we are not only sure *have* existed, but of many, though of ancient origin, which *still* exist; including whatever the moderns have retained, improved, or invented, relative to the ART and SCIENCE of MUSIC.

find the basis of the question, and render them intelligible to every feeling of humanity. I have here reviewed my captivities concerning the Music of the ancients, and the present volume; referring for the rest to the history of each time as more modern times have been delighted with, beginning with its introduction into the Church: and it is hoped that the narrative will become more interesting to the reader in proportion as he advances towards certainty; and the account of things that we are not only sure have existed, but of many, though of ancient origin, which still exist; including whatever the moderns have retained, improved, or invented, relative to the Art and Science of MUSIC.

I have here reviewed my captivities concerning the Music of the ancients, and the present volume; referring for the rest to the history of each time as more modern times have been delighted with, beginning with its introduction into the Church: and it is hoped that the narrative will become more interesting to the reader in proportion as he advances towards certainty; and the account of things that we are not only sure have existed, but of many, though of ancient origin, which still exist; including whatever the moderns have retained, improved, or invented, relative to the Art and Science of MUSIC.

ADDITIONAL NOTES.

PAGE 6. AND POETIC, OR THE COMPOSITION OF VERSES.] To these divisions, Aristides Quintilianus, and some other musical writers, add *Odicum*, or the *Art of Singing*; which, indeed, seems of more importance to Music, than either the *Organic* or *Hypocritic* art.

P. 15. AND THE LOWER FOR THE LYRE.] We are told, not only by Alypius, but by Gaudentius, p. 23, that of the two rows of letters used for musical characters, the upper is for the words, that is, *to be sung*, and the under to be played.

P. 27. LET US AFTER THIS CONSIDER THE DIFFERENCE OF INTONATION, &c.] These differences are certainly distinctions and difficulties in our notation, as C# and D b are not only different sounds upon perfect instruments, but expressed by different characters in our tablature.

P. 38. BORE A STRONG RESEMBLANCE TO THE OLD SCOTS TUNES.] Since the Dissertation was printed, I have been favoured by Dr. Ruffel with twelve Chinese airs, that were brought from China by his brother, the late Dr. Alexander Ruffel, author of the Natural History of Aleppo, all which confirm what has been said of the want of semitones in the Chinese scale, and of the strong resemblance between these airs, and those of Scotland, by the omission of the 4th and 7th of the key. These airs are all in common time, and have words to them.

P. 41. TRITE OMITTED GIVES STILL A STRONG SCOTTISH TINCTURE, &c.] If we suppose the key note to be G instead of E; a major key instead of a minor, this omission gives precisely the Scots scale.

P. 47. AND LEAVE NO NATURAL OUTLINE OF MELODY FOR THE EAR TO SEIZE, LIKE THE ENHARMONIC.] The artificial and difficult Enharmonic seems to have been lost soon after the time of Alexander the Great. Damascenus, in his Life of Isidor, tells us, that during the reign of the emperor Athemius, about 470 years A. C. Asclepiodotus the philosopher, a curious and learned musician, from the great fame in which the Enharmonic Genus had been formerly held, endeavoured to recover it; but after much

time, labour, and study of the canon, dividing a single string into 220 parts by moveable bridges, he was obliged to abandon the enterprize.

P. 54. OR THE CHANGES ACCORDING TO DIFFERENT KEYS OR SPECIES OF DIAPASON.] Perhaps the following is a more accurate and clear definition of Sir F. H. Stiles's double doctrine of the modes, than that inserted in the text.

By the *harmonic* doctrine, the modes were all one and the same series of intervals, such as the general system furnishes, only at different pitches; by the *musical*, they consisted of so many different arrangements of intervals, or species of octave. Sir Francis regarded the harmonic doctrine as only a *tuning trick*, to produce more readily the different species of octave between the fixed sounds. His own hypothesis is too complicated and incomprehensible to be clearly explained here, I must therefore refer the curious reader to the Memoir itself.

P. 58. RECEIVED INTO GENERAL PRACTICE.] Martianus Capella, who flourished 300 years after Ptolemy, and Cassiodorus, a still younger writer, tell us, that there were *fifteen* modes; a proof that his *reform* had not been submitted to, universally.

P. 76. PARTICIPATES OF THE QUALITIES OF BOTH THESE LAST MENTIONED.] In giving an account from Aristides Quintilianus of the many different kinds of time used by the ancients in their vocal music, the reader should have been informed, that, besides our common and triple time, they had measures of 5, and of 7 *equal notes* in a bar; circumstances which must appear very extraordinary to modern musicians. By *double time*, Arist. Quint. means *triple time*, that is, in which the *down* part of the bar was to the *up*, as 2 to 1; or in which one *time* of the bar was *double* to the *other*. So *common* time they called *equal*, because the bars admitted a division into two equal parts. In the same manner, the measure of 5 notes in a bar, was called *Sesquialter*, that is, of 2 to 3; and that of 7 notes, *Epitritus*, or of 3 to 4, from the bars being divided in those proportions.

P. 77. UPON WHICH THE ANCIENTS LAID SO MUCH STRESS.] That the knowledge of poetical feet, and even rhetorical, was by the ancients thought necessary to a musician, is certain from the pains that have been taken, especially by Roman musical writers, to explain them in all the treatises that are come down to us.

P. 81. OR CROTCHETS AND QUAVERS.] Modern "Music, says Mr. Harris, *Disc. on Mus. Paint. and Poet.* p. 73, 1st Edit. has *many different lengths of notes* in common use, all which may be *infinitely compounded*, even in
any

any *one* time or measure.—Poetry, on the other hand, has but *two lengths* or *quantities*, a *long* syllable and a *short*, which is its half; and all the *variety of verse* arises from such feet and metres, as these *two species* of syllables, by *being compounded*, can be made to produce.” What is here said of *verse*, is equally applicable to *ancient* music, which was *strictly* confined to verse: and it seems as if whole pages could not place the difference between the *Rhythm* of ancient and modern music, in a clearer point of view.

P. 83*. SUCH AS ARE THE SUBJECT OF THIS SCENE (Note (f)). Mr. Gray, in his Ode on Poesy, has three times admitted this measure in the three epodes; in the first epode, where Venus and the Graces are dancing, it is certainly used with great propriety and beauty, after

“ Frisking light in *frolic measures*.”

In the other two epodes it was matter of necessity, the subject would hardly have led him to it.

P. 109. DR. BROWN, OR WHOEVER WAS AUTHOR OF THE LETTER, &c.] Since the Dissertation was printed, the letter to Mr. Avifon has been advertised among the writings of the late Dr. Jortin.

P. 130. MR. ADDISON TALKS OF AN HARMONIOUS VOICE.] This is speaking *à la Grec*, and preserving the ancient and original import of the word *harmony*, which implied precisely what the moderns mean by *melody*. The following definitions, with which I was some years since favoured by Mr. Mason, in consequence of a conversation on the subject of ancient music, are too applicable to the present purpose, not to excite in me a desire of communicating them to the reader; to whom they will appear the more important, as Mr. Mason, however he may have wished it, has not been able to conceal from his friends, how little his genius and taste have been confined to poetry, or how great a progress he has made in the knowledge and practice of music. I hope, therefore, that he will pardon my vanity in thus divulging the interest he has kindly taken in the subject of these enquiries.

MUSICAL DEFINITIONS.

“ *Harmony* of the Ancients.

The succession of simple sounds, according to their Scale, with respect to acuteness or gravity.

Harmony of the Moderns.

The succession of combined sounds, or chords, according to the laws of counterpoint.

MELODY.

“The succession of these harmonical sounds, according to the laws of Rhythm or Metre, or, in other words, according to Time, Measure, and Cadence.

MELODY.

What the ancients meant by *Harmony*, Rhythm and Metre being excluded.

AIR.

What the ancients understood by Melody.

“According to these definitions it appears, that Harmony, as we call it, was unknown to the ancients; that they used that term as we use simple melody, when we speak of it as a thing distinguished from modulated air; and that their term Melody, was applied to what we call air, or song. If this be true, much of the difficulty in understanding ancient musical writers will vanish.

“If an ancient Tibicen used an improper tone or semitone, or transgressed the rule of the mode or key in which he was playing, he committed an error in Harmony; yet notwithstanding his melody might be perfect, with respect to the laws of Rhythm and Measure. We should rather say of a modern musician, in the same instance, that he transgressed the laws of melody, yet preserved the air.

“A man ignorant of music, but of a good natural ear, that heard a single voice or instrument committing this fault, would only say, that *the performer sung or played out of tune, yet he kept his time*. The man in this case judges by that taste, which the ancients would call a good harmonical ear, and which we call an ear for *Melody*. I put this familiar instance only to make the difference of the definitions more clear.”

P. 136. NEVER THE UNION, OR SIMULTANEOUS USE OF THEM.] Theocritus, Idyll. xviii. describes the bride-maids of Helen in the act of dancing and singing altogether, *one and the same melody or tune*.

Αἰδον δ' ἀρὰ πασαι ἐς ἑμῆλος ἐγκροτεῖσθαι.

P. 152. A VERY SLOW, SONOROUS, AND ARTICULATE UTTERANCE.] Quintilian, lib. i. cap. 8. says, that “children should be taught to read verse differently from prose; for verse is a kind of music; and the poets tell us themselves *that they sing*; but this must not be overdone, in a whining effeminate tone, as if they were really singing a song.—Some, he continues, will

will have it, that children should recite verses *like actors on the stage*; but this is not my opinion; nothing more is necessary than a gentle inflection of voice, merely to distinguish what the poet says himself, from what he makes others say."

P. 153. TO BE AUDIBLE AT A GREAT DISTANCE, OR IN A WIDE SPACE.] The theatre built by Augustus, and dedicated to the memory of his nephew Marcellus, though one of the smallest in Rome, contained 22,000 people; and, according to Pliny, *lib. xxxvi. cap. 15.* the theatre of Pompey was sufficiently spacious to admit 40,000 people, and that of Scaurus 80,000.

Ib. Note (a). EXAGGERATED GESTURE BECOMES DANCING.] The late M. Marmontel, in the *Encyclopedie*, Art. DECLAMATION, says, that the whole merit of speaking on the stage consists in being natural; and of acting, in being well acquainted with the customs and manners of the world; now nature cannot be taught, nor can the manners of society be learned from books; yet I shall give here an excellent reflection from this author, which seems to approximate parties, by making allowance for a small deviation from the nature of common life, in favour of the poet and the actor, whose writings and speech are somewhat more inflated when the buskin is on, than at other times. "For the same reason as a picture, which is to be seen at a distance, requires bolder strokes and higher colouring, the theatrical voice must be pitched higher, the language be more lofty, and the pronunciation more accentuated, than in society, where we communicate our ideas with more facility, but always in proportion to the perspective; that is to say, in such a manner that the tone of voice should be softened and diminished to the degree of nature, before it arrives at the ear of those to whom it is addressed."

P. 154. FOR MANY AGES BEEN ACCUSTOMED.] Julius Pollux, *lib. iv. cap. 19.* Περὶ προσωπῶν τραγικῶν, Σατυρικῶν, καὶ Κωμικῶν, is still more ample in his account of theatrical masks, used in Tragedy, Satyr, and Comedy.

P. 155. Note (c). IT WAS DUG OUT OF POMPEII.] That the mask was an Egyptian invention seems certain, by one that is preserved in the Brandenburg collection, and a drawing of it published by Berger. It represents Isis, is gigantic, and covered with hieroglyphics, some of which have extended wings, like those to be seen in the Isiac table.

P. 156. THEATRIC VASES.] Kircher, however, whose pen was never impeded by doubts or difficulties, has not only described, but given them imaginary forms, resembling bells. See *Musurgia*, tom. ii. p. 285.

P. 158.

P. 158, Note (m). A MORE MODERN TERM.] Notwithstanding this assertion, the word *νομος* does occur in Homer's Hymn to Apollo, v. 20. though not in the Iliad or Odyssey.

P. 160. AND THENCE CAME THE CUSTOM OF MAKING SINGING AND DANCING TWO DIFFERENT PROFESSIONS.] Upon a more deliberate examination of this passage in Livy, it clearly appears, that the *separation* in question was that of the *singing* from the *dancing*, according to the opinion of M. Duclos ; the story which, when applied to *speaking* and *acting*, is absurd and incredible, becomes both natural and probable, in the other sense. It has just been observed in the text, that *acting* and *dancing* were frequently confounded in ancient authors, and perhaps Livy meant no other *acting* than what *dancing* literally implied.

P. 161. BUT OF A DIFFERENT POET.] That the Tibicines exhibited between the acts seems evident from a passage in Plautus, who makes one of his characters say, at the conclusion of the first act of the *Pseudolus* ; I must go in : “ *Tibicen vos interea hic delectaverit.*”

P. 163. NO KIND OF BASE ACCOMPANIMENT WAS KNOWN TO THE ANCIENTS.] Though the idea of a *base* part to mere declamation is not probable, yet the supposition of its being played upon a Flute is perhaps less absurd than it will at first appear to those, who regard all Flutes as *treble instruments*. Arist. Quint. who gives a kind of scale of Lyres, (see Description of Plates) gives likewise one for wind instruments. The *σαλπιγξ*, or Trumpet, at the grave, or, as he calls it, *masculine* extremity ; and the Phrygian *αυλος*, or Flute, at the *feminine*. Of the middle class he mentions the *Pythic* Flute as of a masculine character, on account of its *gravity* : *διὰ το βαρος*. Now, according to Diomedes, this *Pythic* Flute was the very instrument used in the *Cantica*, or declamation. The *melos* of tragedy is said to be *Hypatoides* (Arist. Quint. p. 30.) ; that is, of the *lowest* pitch. Accordingly, Aristotle tells us, expressly, in his Problems, that the modes appropriated to declamation, were the Hypodorian and Hypophrygian ; that is, the two lowest in the system. The Flute that accompanied these could not well be a *treble instrument*, without playing in octaves, or double octaves, to the voice. However, if we were to suppose a *base* accompaniment to these low modes, different from the voice part, it must have been performed on a Flute of an enormous size.

Ibid. AFTER THE MANNER IN WHICH ARCHILOCHUS HAD ACCOMPANIED HIS IAMBICS.] As to the recitation of tragedy being accompanied by the *Cithara*, there is a strong support for the opinion in Aristotle's 49th Problem, where

where he calls the Hypodorian mode used in declamation, καθαρωδιωτικη των αρμονιων; that is, *the most adapted to the Cithara of all the modes*. And Athenæus, *lib. i. cap. 17. p. 20.* speaks of Sophocles *playing the Cithara himself*, in his tragedy of *Thamyris*.

P. * 219. AND FIGURE OF THE SHELL OF A TORTOISE.] Pausanias, *In Arcad. ad Calcem*, says, that "there was an excellent breed of tortoises, for the purpose of making the *bellies of Lyres*, upon Mount Parthenius; but that the inhabitants supposing these animals sacred to Pan, would neither use them, nor suffer strangers to take them away." This is a proof that the practice of applying the shell of the tortoise to the Lyre, was once common in Greece, as well as Abyssinia and Egypt.

P. * 226. NO OTHER MERIT THAN THE DIFFICULTY OF FORMING THEM.] Another conjecture concerning the tuning of the thirteen strings of the Theban Harp, is, that they furnished the four tetrachords, *Hypaton*, *Meson*, *Synemmenon*, and *Diezeugmenon*, with *Proslambanomenos* at the bottom. Thus :

P. 222. VATES, IN LATIN, IS A COMMON TERM FOR PROPHET, POET, AND MUSICIAN.] Clemens Alexandrinus, *Strom. v. p. 634*, describing the different kinds of Egyptian priests, and their functions, says, that the principal of them were called *Prophets*.

P. 237. WITHOUT INJURING THE SENSE OF THE TEXT.] M. Fourmont, *Mem. de Litt. tom. iv.* has not only discovered that the Psalms, and other pieces of Hebrew poetry, are in *rhyme*, but that *Sela* had the same force in *Hebrew Music*, as *bis*, or a double bar pointed, has in modern Christian music. This perspicacious critic, with equal sagacity, has found out, that in order to make matters even in the versification, in which he unwillingly allows the lines to be of different lengths, the Hebrews sung their poetry in *Fugue*!

P. 238. THE FIFTH PART GOLD, AND THE FOURTH PART SILVER.] This passage was hastily taken from l'Estrange's translation of Josephus, who, in the original, only says, that the Trumpets were made of *Electrum*; a metal, of which, according to Pliny, *lib. 33. cap. 4.* four parts were gold, and the fifth part was silver.

P. 246. AS THE HEBREW LANGUAGE HAD ORIGINALLY NO VOWELS.] This assertion must appear very bold, without the support of authority; for it seems impossible for any language to subsist without vowels. "The Hebrew alphabet, say the authors of the *Encyclopedie*, Art. HEBRAIQUE, is composed of twenty-two letters, all regarded as consonants, without excepting even the *aleph*, *he*, *vau*, and *jod*, which we call vowels, but which among the Hebrews have no fixed sound or power, without punctuation; for that alone contains the true vowels of this language." Now as *points* are generally allowed to be of modern invention, if, in times anterior to their use, it was doubtful to which of the consonants the power of a vowel was given, or, indeed, whether any such power existed, the language must have been very harsh and unmusical; which is all that I intended to say on the subject.

P. 277. THE SEVEN-TONGUED LYRE.] Though Pindar calls the Lyre *seven-tongued*, yet we are told that Pythagoras, who lived before him, added an eighth string to that instrument. But, perhaps, this new string was not in general use, in Pindar's time.

P. 294. CLIO THE HISTORIAN.] The literal translation of these inscriptions would run thus: Clio *invented* History; Thalia *invented* Comedy, &c.; the accusative case in them all being elliptic. ΘΑΛΕΙΑ ΚΩΜΟΔΙΑΝ, should be Κωμωδιαν. The word, however, has been faithfully transcribed from the plate in the Antiquities of Herculaneum, where it is said to be erroneously written in the original inscription upon the base of the statue; a proof that there were artists among the ancients who could not *spell*, as well as among the moderns.

P. 330. ALLOWS HIM TO HAVE BEEN THE INVENTOR.] It was too hastily said that almost all antiquity agreed in allowing to Pythagoras the invention of the sound *Proflambanomenos*; an eighth sound to the Heptachord, which made the scale consist of two disjunct, instead of two conjunct Tetrachords, is all that antiquity allows him.

Another consequence of haste appears in the same page, in speaking of the *writings of Orpheus*: Pindar only says that he was one of the Argonauts; and Herodotus by *Orphics*, τὰ Ὀρφικά, means only the *Orphic mysteries*, not a poem so called.

The passage in Pindar concerning Orpheus, is, however, curious: in speaking of the Argonauts, he says, "Orpheus joins these heroes; Orpheus father of the Lyre and of song; Orpheus whom the whole universe celebrates, and whose sire is Apollo."

P. 338, Note (d). ARISTOPHANES IS THE OLDEST GREEK WRITER, IN WHOSE WORKS *Λύρα* APPEARS.] This likewise was too hastily said, by trusting to the diligence and exactitude of lexicographers; for since this note was printed, I have found the word in the Hymn to Mercury, which is attributed to Homer; in a fragment of Alcæus; and in the first Ode of Anacreon.

P. 340. WHICH WERE SOUNDED LIKE TRUMPETS.] “Nothing was more useful, says Plutarch, than music, to stimulate mankind to virtuous actions, particularly in exciting that degree of courage, which is necessary to brave the dangers of war. To this end some have used the Flute, and others the Lyre. The Lacedæmonians played upon the *Flute*, in approaching the enemy, the air or melody that was set to the song or hymn, addressed to Castor; and the Cretans played their military marches for many ages on the *Lyre*.” The Thebans and Lacedæmonians had a Flute upon their ensigns, the Cretans, a Lyre; and many ancient nations and cities have impressed the Lyre upon their coins, as their particular symbol. The city of Rhegium, for instance, had a woman’s head on one side, and on the reverse a *Lyre*. In a medal inscribed *Caleno*, the Minotaur is seen, with the addition of the *Lyre*. The Thespians had one of the Muses and a *Lyre*; the Lapithæ, a Diana, and on the reverse a *Lyre*; the isle of Chios, Homer on one side, and on the other a Sphinx, with a Lyre in its paw. The isle of Tenedos had on one side of their coins a head with two faces, and on the reverse an ax with a bunch of grapes, the symbol of Bacchus, near it on one side; and a Lyre, the symbol of Apollo, on the other. The Lyre with thirteen strings is likewise to be seen on two Roman coins in Montfaucon, Suppl. p. 74.

P. 369. A WRITTEN MELODY.] Casaubon tells us, in his annotations upon Athenæus, *lib. viii. cap. 12.* that Stratonicus, a musician whom Athenæus frequently celebrates for his wit and humour, invented *Diagrams*, or *Gamuts*, and gives for his authority Eresius Phantias, the Peripatetic; but the invention of musical characters seems to include the formation of a scale, and Stratonicus flourished long after both Terpander and Pythagoras, to whom different writers have ascribed the first use of alphabetic characters, as types of musical sounds.

P. 377. AND WITHOUT A CAPISTRUM OR MUZZLE.] I shall insert here, for the satisfaction of the learned reader, the original epigram from the *Onomasticon* of Julius Pollux, *lib. iv. cap. 12.* as it is not, I believe, in the Anthologia of Stephens, nor has it been cited by any modern author that I know of, except Isaac Vossius.

Ἰβλαιο κηρυκε τοδ' Αρχια Ευκλεος υιω
 Δεξαι αγαλμ' ευφρων, Φοιβε' επ' απημοσυνη.
 Ὅς τρις εκαρυξεν τον Ολυμπιας αυτος αγωνα,
 Ουθ' υποσαλπιττων, ετ' αναδειγματ' εχων.

Ibid. AND DIED ON THE SPOT.] This account is so extraordinary, that it seems to require the testimony of the author's own words : *εναπεπνευσετω αυλω*, *breathed his last breath into the Flute* ; and *εν τη σκηνη απεθανε*, *he died upon the stage*.

P. 396. O LULL TO REST! MY TORTUR'D SOUL.] The translation of these lines is neither so faithful nor poetical as I could wish for the public eye ; for though I had read myself into a feeling of the story, and a desire to give it to the reader, yet the MS. was called for by the printer before I had time to endeavour at expressing it in a manner resembling the simplicity of the original.

Perhaps the fourth couplet, at the bottom of p. 395, would convey the sense of the author better thus :

While in pale glimm'ring, interrupted light
 The moon but shows the horrors of the night.

P. 416. TO WHOM THE CARE OF YOUTH WAS TO BE CONFIDED.] It was thought disgraceful for a gentleman not to be able to play upon the Flute. Cornelius Nepos ranks it among the accomplishments of Epaminondas that he could dance well, and play on the Flute. But he was a *Theban*. It seems that *Theban Flute-players*, and *Lesbian Lyrists*, were always the most celebrated throughout Greece.

P. 426. *Εκλυσις & εκβολη*.] These are most perplexing words, as all Greek technical terms are now become. At the time they were used, they could only have been familiar to artists ; few else, at present, know the modern terms of art. Since the passage concerning them was printed, I have considered the definitions of Bacchius, and Arist. Quint. and am now convinced that these terms were peculiar to the *Enharmonic* ; that *εκλυσις* was a particular kind of tuning in the *Enharmonic Genus*, in which, from a certain sound, the finger or player fell by an interval of three quarter-tones ; and *εκβολη*, when he rose by five quarter-tones. The words, at least, express something very violent and unusual ; *εκλυσις*, *dissolution* ; *εκβολη*, *throwing out, disjoining* ; it was the technical term in ancient surgery for *dislocation*.

P. 430. SUNG THE SAME PART.] Athenæus, *lib. xiv. p. 635*, has fully discussed the use and properties of the *Magadis*, and confirmed the opinion,

opinion, that *magadizing* is *singing*, or *playing in reciprocal sounds*, or in the octave, as Casaubon understands it. Ψαλμον αντιφθον. Δια πασων.

P. 436. Note (e). CONFOUNDING ALL THINGS WITH ALL.] Though it was Plato's opinion that the government of a state, and the morals of a people, would be affected by a change in the national music, yet this was not the opinion of Cicero, who in many other particulars is a rigid Platonist: "Change, says this orator, the government or customs of a city, and it will certainly change the music." *De Legib. lib. iii.*

P. 445. Note (z). WITH TRANSPOSITIONS OF THIS SERIES OF SOUNDS.] The abbé Rouffier imagines, however, that though Pythagoras went no farther than the eighth term in the triple progression, yet the Egyptians, in very high antiquity, extended the series to twelve terms, which would give every possible Mode and Genus perfect. A curious circumstance is observed by the same author, p. 28. § 47. with respect to the musical system of the Chinese, which well deserves mention here. "In collecting, says he, what has already been advanced concerning the original formation of the Chinese system, it appears to begin precisely where the Greek left off, that is, at the VIIIth term of the triple progression, which is pursued as far as the XIIth term, by which series, arranged diatonically, the Chinese acquire their scale, eb, Db, Bb, Ab, Gb, Eb, in descending: or as Rameau expresses the same intervals, in sharps, ascending, G#, A#, C#, D#, E#, g#." —It is observable that both these scales, which are wholly without semitones, are Scottish, and correspond with the natural scale of the old simple Enharmonic, given p. 41. M. Janard, a late French writer on Music, pushing calculation still further, than either the Egyptians or Chinese, has obtained, by pursuing the harmonic series, 1, 2, 3, 4, &c. &c. not only the enharmonic diesis, but even the minute intervals in the warbling of birds; it is wonderful he did not apply his ratios to human speech.

P. 458, Note (m). SAYS M. DE VOLTAIRE.] The more rigid moralist, Plato, *de Legib.* says, that the Gods allowed festivals to be instituted to their honour, at which the Muses, with Apollo their leader, and Bacchus, were to preside: these were intended as relaxations to mankind, who otherwise would sink under the pressure of toil and sorrow, to which they are subjected by nature. Οι θεοι οικτειραντες τοτων ανθρωπων επιπονου πεφυκος γενε, αναπαυλας τε αυτοις των πονων εταξαντο, τας των εορτων αμοιβας τοις θεοις και Μεσας, Απολλωνα τε Μεσηγετην, και Διανεσον, ξυνεορτασας εδωσαν.

R E F L E C T I O N S

U P O N T H E

Construction and Use of some particular MUSICAL INSTRUMENTS of
A N T I Q U I T Y.

THE musical instruments of the ancients were of three kinds ; *wind instruments* ; *stringed instruments* ; and instruments of *Percussion*. Of the FIRST kind the principal were the Flute, Horn, Syrinx, Trumpet, and water Organ, under the several denominations of *Αυλος*, *Tibia* ; *Κερας*, *Cornu* : *Σαλπιγξ*, *Tuba*, *Buccina*, *Lituus* ; *Συριγξ*, *Fistula*, *Calamus* ; and *Υδραυλος*, *Hydraulicon*. The SECOND class included the *Φορμιγξ*, *Κιθαρα*, *Cithara* ; *Χελυς*, *Chelys*, *Testudo* ; *Λυρα*, *Lyra*, *Fides* ; *Ψαλτηριον*, *Psalterium*, &c. which, in English, are indiscriminately called Harp, Cithara, Lyre, and Psaltery. The THIRD class comprehended the *Τυμπανον*, *Tympanum* ; *Τυμπανιον*, *Parvum Tympanum*, *Tympanulum* ; *Κυμβαλον*, *Cymbalum* ; *Κροταλον*, *Crotalum*, *Κοδομειον*, *Campanum æs*, or Drums, Cymbals, Crotola, and Bells.

Of these three genera the species were innumerable ; however, I shall speak only of the principal of each genus, and first of *wind instruments*.

The two instruments of this kind which nature has constructed, and from which mankind, taught perhaps by the whistling reeds, first tried to produce musical sounds, seem to have been the shells of fishes, and the horns of quadrupeds ; and the *Μοναυλος*, or single pipe, appears in sculpture to have been a mere *horn* in its natural form. (See p. 211.) Then succeeded the *Avena*, or single oaten stalk ; the *Calamus*, or single reed, or cane ; and afterwards the *Syrinx*, or *Fistula*, composed of a number of reeds of different lengths tied together. These simple instruments preceded the invention of *Foramina*, or holes, by which different sounds could be produced from the same pipe. The *Tibia* was originally a Flute made of the shank, or shin-bone of an animal ; and it seems as if the wind instruments

of

of the ancients had been long made of such materials as nature had hollowed, before the art of *boring* Flutes was discovered. That once known, they were formed of box-tree, laurel, brass, silver, and even of gold.

There are certain epithets applied to theatrical Flutes in the titles to the Comedies of Terence, which have extremely embarrassed the critics: such as *Pares*, *Impares*, *Dextræ*, *Sinistræ*; and it has long been doubted whether *Pares* and *Impares* meant double and single Flutes, or equal and unequal in point of length and size. But though in preferring either of these acceptations, some sense and meaning is acquired, yet I should incline to the latter. For in none of the representations in ancient painting or sculpture, which I have yet seen, does it appear that the Tibicen, either at sacrifices or in the theatre, plays on a *single* Flute, though we as often see double Flutes of *different* lengths in his hands, as of the *same* length; and as harmony or music in different parts, does not appear to have been practised by the ancients, the Flutes of *equal* length may naturally be supposed to imply *unisons*; and *unequal*, such as are *octaves* to each other. But as to the distinction between *right-handed* and *left-handed* Flutes, I must own myself far from being possessed of any clear and decisive idea concerning it. The first, and most obvious meaning of the words *right* and *left*, applied to the hands that hold the Flutes, cannot afford a satisfactory explanation: for as all the theatrical Flutes that I have ever seen are *double*, the holding them in the right or left hand can make no difference to the audience.

It has been imagined by the abbé du Bos, that when the theatrical Flutes were unequal, a drone base was performed on the largest; an idea to which I can by no means subscribe: for the necessity of a clear and undisturbed elocution on the stage, joined to the tenderness of the ancients for poetry, would have rendered the noise and confusion of a drone base more offensive to such as attended to the interest of the drama, than the most florid and complicated counterpoint. It is no uncommon thing to see one of the unequal Flutes used upon these occasions strait, and the other curved at the end. (See Plate VI.) Hesychius, as quoted by Bartholinus, (p. 46.) says, that the horned Flute was for the left hand, the strait one for the right. That the *longest* of the two instruments was for the left hand, Pliny seems to prove, when he speaks of cutting the reeds with which they were made; for he says the part next the ground being the widest, serves for the left-hand Flutes, &c. These passages, however, furnish no proofs of their being destined for different parts, or any thing more than *octaves* to each other. Most of the double Flute-players represented in sculpture, appear to grasp the in-
struments,

struments, without any motion of the fingers; nor indeed in many of them are there any holes in sight to employ them, which makes it probable that they were modulated by the mouth like trumpets and horns.

Another difficulty occurs about these Flutes being *always double*, that is, two single tubes held in different hands, or uniting in one mouth-piece. But as I have never seen more than *one* performer at a time represented in painting or sculpture, accompanying the actors on the stage, or the priest at the altar, where these *double*, or *Phrygian Flutes* were chiefly used, they may perhaps have been preferred for their superior loudness; for force must not only be necessary to the voice in a large temple or theatre, but also to the instruments that accompanied it, in order to the being heard by such a numerous audience as was usually assembled there. Just as the actor's voice was augmented by a mask, and his height encreased by stilts*.

The muzzles, and bloated cheeks in representations, corresponding with verbal descriptions, prove that *quantity* of sound was the principal object of the ancients. This might be confirmed by stories of Flute-players and Trumpeters bursting themselves in trials of skill, and even in the common exercise of their profession. Heliodorus, *Æthiop. lib. ii.* as Bartholinus translates the passage, p. 97, describes a Flute-player with eyes inflamed, and starting out of their sockets. *Oculis incensis, ac suâ sede excedentibus*; and this is analogous to the whole system of the ancient theatre.

The defects, however, peculiar to wind instruments, seem to have been as well known to the ancients as the moderns; and Aristoxenus complains of them in strong terms. Among many expedients to which he says performers had recourse, in order to palliate these defects in the intervals, the use of *wax*, occasionally, in the holes of their instruments was one. This expedient must, however, have been used, in order to supply the want of skill in boring Flutes; and the wax, in warm climates, would be too subject to fusion for a performer to depend much upon its assistance in the *heat* of action. An instrument of the Bassoon kind, called the *Courtaut*, with two rows of projecting apertures, resembling those in No. 3. Pl. VI. is described by Merfennus, *De Instrum. Harmon. lib. ii.* who tells us that the *Tetines*, as he calls the projections, were not moveable, but fixtures, and when those on one side were used, those on the other were *stopt with wax*. The pipes of the *Fistula Panis*, being composed of reeds or canes cut just below the joint, were all *stopt-pipes*, like those in the stopt diapason of the Organ, in which

* See *Dissert. sect. IX.*

the wind is emitted at the same place where it enters ; and as it has a double motion to make, twice the length of the tube, the tone is an octave lower of a *stopt-pipe*, than of an open one of the same length and diameter. The *Fistula Panis* of the island of New Amsterdam in the South Seas, is made of canes cut below the joints, and consequently of *stopt pipes* ; and the pipes of an Arabian instrument of the same kind, which I have lately received from Aleppo, are all stopt at the end *with wax*.

In all my researches I have not been able to discover that the ancients had *Reeds* for any of their *wind instruments*. They had Flutes made of natural reeds, and of canes ; but no such *artificial* reeds as we use for our Bassoons, Hautbois, and Clarinets. They had indeed a small pipe or fistula which they applied to their Flutes occasionally, in order to alter the tuning, like the crooks, or mouth-pieces, which we use for Trumpets and Horns. These were fixed higher or lower, in order to lengthen or shorten the whole tube as the middle-pieces of German Flutes are sometimes *drawn out* to flatten, and *pressed into* the sockets, to sharpen the tone of the whole instrument. The proofs for this use of the Syrx, or little pipe, are, first, a passage in Plutarch's dialogue, which informs us that Telephanes (see p. 426.) had such an aversion to the use of these pipes that he would never suffer the Flute-makers to apply them to his instruments ; and this was the principal reason why he never entered the lists at the public games, where these crooks or mouth-pieces were much in use ; and if their effect rendered the intervals of his instruments as false as those of our Flutes are by drawing out the middle-pieces, it was a proof of his judgment and delicacy of ear. A second proof that it was a *single* pipe, and very *small*, appears from all the uses and applications of the word Συριγξ. It was merely a little Flageolet, or *whistling* pipe. The *Fistula Panis* was composed of a number of syringes fastened together ; each of which was properly a συριγξ. Third proof, that its use was to alter the pitch of the instrument to which it was applied appears from a passage in another work of Plutarch, *Ne suaviter quidem vivi posse Secund. Epicuri decreta*, who there gives it as a musical problem, " Why the Flute when the Syrx is *drawn up*, is *sharpened in all its sounds*, or its whole pitch raised, and when it is *let down* is again flattened ?" These passages are sufficient proofs that the word συριγξ could not mean a *Reed*, though M. Burette has translated it *Hanche*, which is equivalent to the word *reed* in English. These γλωττιδες, *lingulae*, tongues, or Fipples, were carried about by the performers in boxes, γλωττονομεια, *tongue-cases*, as reeds are at present, Barthol. p. 344.

The

The last wind instrument of which I shall speak is the *Hydraulicon*, or Water-Organ, that was played, or at least blown, by a cataract, or fall of water. Indeed it has been much disputed whether it was played with *fingers*, by means of levers or *keys*; and yet the description of it by Claudian seems such a one as would suit a modern Organ, only blown by water instead of bellows.

*Vel qui magna levi detrudens murmura tactu
Innumeras voces segetis moderator aënae
Intonet erranti digito, penitusque trabali
Veste laborantes in carmina concitet undas.*

In Athenæus, *lib. iv. p. 174.* there is a history and description of this instrument. He tells us that it was invented in the time of the Second Ptolemy Euergetes, by Ctesibius, a native of Alexandria, and by profession a barber; or rather, it was improved by him, for Plato furnished the first idea of the Hydraulic Organ, by inventing a night-clock, which according to Perrault, Vitruv. *lib. 10.* was a *Clepsydra*, or water-clock, which played upon Flutes the hours of the night at a time when they could not be seen on the index.

The anecdote in Athenæus concerning the mechanical amusements of the great ideal philosopher is curious. What a condescension in the *divine* Plato to stoop to the invention of any thing useful! This musical clock must have been wholly played by mechanism. But neither the description of the Hydraulic Organ in Vitruvius, nor the conjectures of his innumerable commentators, have put it in the power of the moderns either to imitate, or perfectly to conceive the manner of its construction; and it still remains a doubt whether it was ever worthy of the praises which poets have bestowed upon it, or superior to the wretched remains of the invention still to be seen in the grottos of the vineyards, near the city of Rome.

In the collection of antiquities bequeathed by Christina Queen of Sweden to the Vatican, there is a large and beautiful medallion of Valentinian, on the reverse of which is represented an *Hydraulic Organ*, with two men, one on the right, and one on the left, who seem to pump the water which plays it, and to listen to its sound. It has only eight pipes, placed on a round pedestal, and as no keys or performer appear, it is probable that it was played by mechanism. The Organ blown by *bellows*, and furnished with *keys*, such as are in present use, though a descendant perhaps of the *Hydraulicon*, does not so properly belong to this place as to the second volume, where its invention will be discussed, and its improvements traced among those of *modern instruments*.

Second

Second genus, or Stringed instruments. The idea of producing sound from a string, ascribed to Apollo, was, according to Censorinus, *De Die Nat. cap. 22.* suggested to him by the twang of his sister Diana's bow. Ψαλλειν is strictly to twang a string, and Ψαλμος the sound which the bow-string produces at the emission of the arrow. Euripides in *Bacch. v. 782.* uses it in that sense,

————— τοξων χειρι
Ψαλλεσι νευρας.

Who twang the nerve of each elastic bow.

Father Montfaucon says it is very difficult to determine in what the Lyre, Cithara, Chelys, Pfaltery and Harp differed from each other; as he had examined the representations of 600 Lyres and Citharas in ancient sculpture, all which he found without a neck, and the strings open as in the modern Harp, played by the fingers. *Antiq. Expl. tom. iii. lib. 5. cap. 3.* But though ancient and modern authors usually confound these instruments, yet a manifest distinction is made by Arist. Quintil. in the following passage, p. 101. After discussing the characters of wind instruments, he says, "Among the stringed instruments, you will find the Lyre of a character analogous to *masculine*, from the great depth or gravity, and roughness of its tones; the *Sambuca* of a *feminine* character, *weak* and *delicate*, and from its great *acuteness*, and the smallness of its *strings*, tending to *dissolve* and *enervate*. Of the intermediate instruments, the *Polyphongum* partakes most of the feminine; but the *Cithara* differs not much from the *masculine* character of the *Lyre*." Here is a scale of stringed instruments; the *Lyre* and *Sambuca* at the extremes; the *Polyphongum* and *Cithara* between; the one next to the *Sambuca*, the other next to the *Lyre*. He afterwards just mentions that there were others between these. Now it is natural to infer, that as he constantly attributes the manly character to gravity of tone, the *Cithara* was probably the more acute instrument of the two; less loud and *rough*, and strung with smaller strings. Concerning what difference there might be in the form and structure of the instruments, he is wholly silent. The passage, however, is curious as far as it goes, and decisive. The *Cithara* may perhaps have been as different from the *Lyre* as a single Harp from a double one; and it seems to be clearly pointed out by this multiplicity of names, that the Greeks had *two* principal species of stringed instruments; one, like our Harp, of full compass, that rested on its base; the other more portable, and slung over the shoulder like our smaller Harp and Guitar, or like the ancient Lyres represented in sculpture.

The use of the *Phorminx* in Homer leads rather to the rough, manly, Harp-like character (a). But a line in Orpheus, *Argon.* 381. seems to make *Phorminx* the same as *Chelys*, the Lutiform instrument of Mercury. It is said of Chiron, that he "sometimes strikes the Cithara of Apollo; sometimes the shell-resounding *Phorminx* of Mercury." This line is curious; and if the Argonautics were not written by Orpheus himself, they have all the appearance of great antiquity.

The belly of a Theorbo, or Arch-Lute, is usually made in the shell-form, as if the idea of its origin had never been lost; and the etymology of the word Guitar seems naturally deducible from Cithara: it is supposed that the Roman C was hard, like the modern K, and the Italian word *Chitarra* is manifestly derived from *Κίθαρα*, *Cithara*.

In the hymn to Mercury, ascribed to Homer, Mercury and Apollo are said to play with the Cithara *under their arms*. ver. 507. ὁ δ' ὑπὸ ὤλεϊον κιθαρίζεν, *sub ulna Citharâ-ludebat*. "played with the Cithara *under his arm*." So in ver. 432. ἐπὶ ὤλεϊον, *at his arm*, should, according to the critics, be ὑπὸ ὤλεϊον, as it is afterwards. This seems to point out a Guitar more than a Harp; but the ancients had Lyres, Citharas, and Testudos of as different shapes from each other, as our Harp, Spinnet, Virginal, and Piano Forte.

These passages in old authors are a kind of antique drawings, far more satisfactory than those of ancient sculpture; for I have seen the Syrx, which had a regular series of notes ascending or descending, represented with seven pipes, four of one length, and three of another, which of course would furnish no more than two different sounds. The Cymbals too, which were to be struck against each other, are placed in the hands of some antique figures in such a manner, that it is impossible to bring them in contact with the necessary degree of force, without amputating, or at least violently bruising the thumbs of the performer. And it is certain that artists continued to figure instruments in the most simple and convenient form for their designs, long after they had been enlarged, improved, and rendered more complicated. An instance of this in our own country will confirm the assertion. In the reign of George the Second a marble statue was erected to Handel in Vauxhall gardens. The musician is represented playing upon a Lyre. Now if this statue should be preserved from the ravages of time and accident 12 or 1400 years, the Antiquaries will naturally conclude that the instrument upon which Handel acquired his reputation was the

(a) See p. 344.

Lyre; though we are at present certain that he never played on, or even saw a Lyre, except in wood or stone.

In one of the ancient paintings at Portici, I saw a Lyre with a Pipe or Flute for the cross-bar, or bridge, at the top; whether this tube was used as a wind instrument to accompany the Lyre, or only as a pitch-pipe, I know not; nor, within the course of my enquiries, has any example of such a junction occurred elsewhere.

There are two expedients for producing sound from the strings of modern instruments with which the ancients seem to have been wholly unacquainted: these are the *Bow* and *Keys*. It has long been a dispute among the learned, whether the Violin, or any instrument of that kind, as now played with a *bow*, was known to the ancients. The little figure of Apollo, playing on a kind of violin, with something *like* a bow, in the Grand Duke's *Tribuna* at Florence, which Mr. Addison and others supposed to be antique, has been proved to be modern by the Abbé Winckelmann, and Mr. Mings. So that, as this was the only piece of sculpture reputed ancient, in which any thing like a bow could be found, nothing more remains to be discussed relative to that point.

With respect to an instrument *with a neck*, besides that on the broken obelisk at Rome, see p. 204, and one from a sepulchral grotto in the ancient city of Tarquinia, which will be described hereafter, there is in an antique painting in the collection of William Locke, Esq. which consists of a single figure, supposed to be a Muse, an instrument nearly in the form of a modern Violin, but the neck is much longer, and neither *bow* nor *plectrum* are discoverable near it. This may have been a *Chelys*, which was a species of Guitar, either thrummed by the fingers, or twanged with a quill. The painting was stolen out of the Navoni sepulchre, commonly called Ovid's tomb, and had been near 200 years in the *Massima* palace at Rome, when Mr. Locke purchased it. Bianchini, *De Instrum. vet.* gives only one instrument in this form. Tab. iv. No. 7. but never mentions the use of a bow. He calls it the *Chelys*, or reformed Lyre of Mercury, which, says he, p. 28. "having the power of shortening the strings by means of a neck, varied the sound of the same string, like several *magades*. Its form may be seen on an ancient vase, which is now in the *Giustiniani* palace at Rome; it was published by Boissard, tom. ii. p. 145. and in the new edition of Gruter, p. 816. It was played on sometimes by the hand, and sometimes with a *plectrum*. See Scalig. in *Manil.* p. 384."

Indeed, the ancients had, instead of a *Bow*, the *Plectrum*, but in all the representations which painting and sculpture have preserved of this implement, it appears too clumsy to produce from the strings tones that had either the sweetness or brilliancy of such as are drawn from them by means of the *bow* or *quill*. But notwithstanding it is represented so massive, I should rather suppose it to have been a quill, or piece of ivory in imitation of one, than a stick or blunt piece of wood or ivory. Indeed Virgil tells us, *Æn.* vi. 647. that it was made of ivory. (See note *m*, p. 329.)

Third genus : Instruments of percussion. Among these it does not appear that the ancients had the long Cylindrical Drum, such as is now used in our armies ; nor had they Tymbals or Kettle Drums, an invention which came from the Turks. All the antique Drums seem of the flat *Tambour de Basque* form ; but the side Drum is so inconvenient for sculpture that it may have existed without being copied by artists. Lampe *De Cymb. Vet.* slightly glances at the subject, *lib.* ii. *cap.* 12. where he gives a curious passage from the *Bacchæ* of Euripides, to prove that antiquity ascribed the invention of the Drum to the *Corybantes* : the description he uses is an exact definition of a Timbrel, or Tabor. He calls it *βυρσοτονον κυκλωμα*, “ a circle with a skin or parchment stretched over it,” which points out the Timbrel form as well as the drawing.

With respect to bells, though small ones were certainly known in very high antiquity, as frequent mention is made of them in the Bible ; yet those of a large size, hung in towers, and rung by ropes, were unknown till about the sixth century. The modern Greeks have none in their churches, not from principle, but compulsion, having been prohibited the use of them by their conquerors, the Turks. A bell is called by Thucydides *κωδων* ; by Diodorus Siculus and Suidas *Πλαταγη* ; Aristophanes has *κωδονιζω*, *I ring* ; and other Greek writers call it *Ἡχειον*, a vase. Plautus, Ovid, Tibullus, Statius, and several other Latin writers mention bells under the denominations of *Tintinnabula* and sounding brass. An account of the introduction of Bells into churches will be given in the second volume.

A

LIST AND DESCRIPTION

OF THE

PLATES TO VOL. I.

PLATE I.

APOLLO and the Nine Muses. To face the Title.

PLATE II.

Mercury presenting the Lyre to Apollo, whom a Muse is crowning. To face p. 275.

PLATE III.

Orpheus and Eurydice. The instrument with a neck, in the hand of Orpheus, though delineated from fancy, very much resembles that in an ancient painting, in the possession of William Locke, Esq. see p. 515.

These exquisite engravings by Mr. Bartolozzi, from the elegant designs of Mr. Cipriani, though they may have been seen by a few of my subscribers, while they were the property of Mr. Giardini, yet, as far as I have been able to learn, that transient view of them produced no other effect than what it is usual for beauty to excite: a desire not only to view, but to appropriate.

With respect to mere embellishments, it is hoped, as none were promised in the proposals, that those which my ambition to render the work as acceptable to the public as I was able, has tempted me to add, at a considerable expence, will be the more welcome to my readers, from their appearing unexpectedly.

After each of these plates had fulfilled its destination of serving as a concert ticket for one performance only, it seemed a hardship upon the admirable artists who designed and engraved them, as well as upon the public, that such productions should be buried in oblivion. This idea, and the want of sufficient time to have others executed, suggested to me a desire of ornamenting my History with them, and a wish to publish and preserve them in a work to which they seem naturally to belong.

PLATE IV.

No. 1, 2, and 3. Antique *Masks*, described p. 154, and 155, Note (c).

4. A Bacchanal playing on two Flutes of the same pitch, *Tibiae Pares*. From an ancient vase in the Giustiniani palace, at Rome.

5. The figure of a Cupid playing on two Flutes with *Stopples*, or plugs. From an ancient painting in the *Museo* at Portici. The use of these stopples seems to have been to stop,

stop or open the holes of a Flute before a piece began, in order to accommodate the scale to some particular mode or genus. See further account of them, No. 2, Plate VI.

6. Pan playing on the Syrinx, from an ancient *Basso Relievo* of Greek sculpture, in the Giustiniani palace at Rome, representing the nursing of Jupiter by Amalthea. This figure holds in one hand the Syrinx, and in the other a Horn, resembling the *Sbarum* represented upon the Arc of Titus, among the Hebrew instruments, supposed to have been copied from those which this emperor had brought from Jerusalem.

7. A *Citharistria*, or female minstrel, from an ancient picture representing a marriage, in the Aldobrandini palace at Rome. The instrument is slung over the shoulder of the performer by a ribbon, and is played without a plectrum. This celebrated painting was found during the time of Pope Clement VIII. in the gardens of Mæcenas.

8. The *Tuba*, or long trumpet, called by the Hebrews the *Trumpet of the Jubilee*. It may be seen in several pieces of ancient sculpture at Rome, particularly on the Arc of Titus, and on Trajan's Pillar. The drawing, whence this was engraved, was made from a *Basso Relievo* at the Capitol, representing the triumph of Marcus Aurelius.

9. A *Timbrel*, or *Tambour de Basque*.

10. A double *Lituus*. The *Lituus* was a crooked military instrument, in the form of the augural staff, whence it had its name. It was a species of Clarion, or octave Trumpet, made of metal, and extremely loud and shrill, used for horse, as the strait Trumpet was for foot. Horace distinguishes it from the *Tuba* or Trumpet :

Multos castra juvant, et Lituo Tubæ

Permistus sonitus, ———

Od. i. 1. 23.

as Claudian does from the Flute.

Tibia pro Lituus, & pro clangore Tubarum

Molle Lyræ, faustumque canant.

The two last instruments were taken from an ancient bas-relief in the Vitaleschi palace at Rome, representing a sacrifice.

11, 12, and 13, are all taken from the same piece of ancient sculpture, or bas-relief, in the Ghigi palace at Rome, representing a group of musicians singing an epithalamium. Of these, 11 and 12 are Lyres or Harps of different construction, but both furnished with too great a number of strings to have been of very high antiquity. There is something singularly animated and pleasing in the position of the performer's right arm, No. 12; where it seems as if, after having touched a string with some force, she was carrying it round with a kind of flourish. The difficulty of expressing motion in a drawing is so great, that without suggesting this idea the action of the figure may be misunderstood, and appear awkward as a *fixed* attitude or position, though as a *transient* attitude and moving position, it is very easy, light, and graceful. 13, is a *double Flute*, or two tubes in unison with each other, blown with one mouth-piece. It may be necessary to apprise the reader that all the figures and instruments on this plate are, as usual, *reversed* in printing, and that the business which appears to have been performed by the right hand in the original, and drawings made from it, seems now to have been done by the left.

PLATE V.

No. 1, and 2, are representations of the *Testudo*, or Lyre of Amphion, in front and profile, as it appears on the base of the celebrated *Toro Farnese* at Rome. See page 268, and 269. This admirable work, consisting of four figures bigger than the life, besides the

the *Toro*, or bull, was found in Caracalla's baths, where the *Farnese Hercules* was likewise discovered; and, except the *Laocoon*, is the only piece of Greek sculpture mentioned by Pliny, that is now remaining. The two projections near the bottom of No. 1, seem to have been fastenings for the strings, and to have answered the purpose of tail-pieces in modern instruments.

3. The *Lyre* held by *Terpsichore*, in the picture of that Muse, dug out of Herculaneum.

4. The *Psaltery*, as it is delineated in the ancient picture of the Muse *Erato*, dug likewise out of Herculaneum. See p. 294. Don Calmet says the *Psaltery* was played upon by a *Bow*, or plectrum: now, besides the almost certainty of the bow being unknown to the ancients, the form of this *Psaltery* is such as makes it impossible to be played upon with a bow. The Hebrew *Psaltery*, however, must have been an instrument of a different form from this. It had originally ten strings, and is called frequently the Ten-stringed Harp, by David in the Psalms. The Hebrew name for it is *Nebel*, or *Nebel Naffor*, whence the Greek *Ναβλιον*, and Latin *Nablium*. Vide Bianchini *De Tribus Gen. Inst. Mus. Vet. Org.* p. 35. Kircher imagines it to have been a horizontal Harp, played with a plectrum, and that it furnished the first idea of a Harpsichord. But there must have been two kinds of *Psaltery* in antiquity, as Athenæus, *lib. v. cap. 25.* mentions the *ψαλτηριον ορθιον*, the upright *Psaltery*, of which kind must have been that under consideration in the hands of the Muse *Erato*.

5. A *Trigonum*, or *Triangular Harp*. It is taken from an ancient painting in the Museum of the king of Naples, in which it is placed on the shoulder of a little dancing Cupid, who supports the instrument with his left hand, and plays upon it with his right. The *Trigonum* is mentioned by Athenæus, *lib. iv.* and by Julius Pollux, *lib. iv. cap. 9.* According to Athenæus, Sophocles calls it a *Phrygian* instrument, and one of his Diphosophists tells us, that a certain musician of the name of Alexander Alexandrinus was so admirable a performer upon it, and had given such proofs of his abilities at Rome, that he made the inhabitants *μωσομαανειν*, musically mad. It may not be unworthy of remark, that this little instrument resembles the *Theban Harp*, Pl. VIII. in the circumstance of wanting one side to complete the triangle. The performer too, being a native of Alexandria, as his name implies, makes it probable that it was an *Egyptian* instrument upon which he gained his reputation at Rome.

6. The *Abyssinian Testudo*, or Lyre in use at present in the province of Tigrè. From a drawing of Mr. Bruce. See p. 217*.

7. The *Cymbalum*, or *Crotalo*. This instrument is frequently to be seen in the Bacchanalian sacrifices and processions represented in ancient sculpture. It is still in general use in eastern countries, and has lately been introduced among the troops of almost all the princes of Europe, on account of its utility in marking the steps of the soldiers, with force and precision during their march. The present engraving was made from an ancient painting at Portici, in which it is placed in the hands of a *Baccante*, who beats time upon it to her own dancing. Though *Crotalo* is the modern Italian name for this instrument, *κροταλον* in Greek, and *Crotalum* Latin implied one that was different from the *Cymbalum*; a kind of *Castanet*. Vide Cic. in *Pison.* 9.

8. A *Hexachord*, or Lyre of six strings, in the hand of a Grecian Apollo, in the Capitoline Museum, at Rome. The three openings at the bottom seem designed to answer the purpose of *sound-holes* in the belly of the instrument.

9. A *Dichord*, or instrument of two strings, with a neck, resembling that upon the great Egyptian obelisk in the Campus Martius at Rome. See page 204. and fig. VII. facing page 205. The present representation was taken from an antique painting, which

still

still subsists in a sepulchral grotto, near the ancient *Tarquiniæ*, and obligingly communicated to me for the use of this work by Mr. Byers of Rome, who intends publishing the antiquities of that city.

10. An *Etruscan Lyre*, with seven strings, in the collection of Etruscan, Greek, and Roman Antiquities, published from the cabinet of the Hon. Sir William Hamilton, Vol. I. Naples 1766. Pl. CIX. With respect to this instrument, it is worthy of observation, that though the vase upon which it is represented is of such indisputable and remote antiquity, the tail-piece, bridge, belly, and sound-holes have a very modern appearance, and manifest a knowledge in the construction of musical instruments among the Etruscans superior to that of the Greeks and Romans, in much later times. The lower part of the instrument has much the appearance of an old Base-Viol, and it is not difficult to discover in it more than the embryo of the whole Violin family. The strings lie round, as if intended to be played on with a *bow*; and even the cross lines on the tail-piece are such as we frequently see on the tail-pieces of old Viols.

11. The Tripodian Lyre of Pythagoras the Zacynthian, from a bas-relief in the Maffei palace at Rome, representing the whole choir of the Muses. Athenæus gives the following account of this extraordinary instrument, *lib. xiv. cap. 15. p. 637.*

“Many ancient instruments are recorded, says Artemon, of which we have so little knowledge, that we can hardly be certain of their existence; such as the Tripod of Pythagoras the Zacynthian, which, on account of its difficulty, continued in use but a short time. It resembled in form the Delphic Tripod, whence it had its name. The legs were equidistant, and fixed upon a moveable base that was turned by the foot of the player; the strings were placed between the legs of the stool; the vase at the top served for the purpose of a sound-board, and the strings of the three sides of the instrument were tuned to three different modes, the *Doric*, *Lydian*, and *Phrygian*. The performer sat on a chair made on purpose. Striking the strings with the fingers of the left hand, and using the plectrum with the right, at the same time turning the instrument with his foot to whichever of the three modes he pleased; so that by great practice he was enabled to change the modes with such velocity, that those who did not see him, would imagine they heard three different performers playing in three different modes. After the death of this admirable musician, no other instrument of the same kind was ever constructed.”

12. A Lyre in the famous ancient picture dug out of Herculaneum, upon which Chiron is teaching the young Achilles to play. See p. 317.

13. The *Sistrum*, an Egyptian instrument of sacrifice; and one that is still used in religious ceremonies by the inhabitants of Abyssinia. See p. 217*. This representation was drawn from an ancient *Sistrum* preserved in the library of *St. Genevieve* at Paris. It has been disputed by the Abbé Winckelmann whether the *Sistrum* was of very high antiquity in Egypt, because it did not appear in the hands of such Egyptian statues as he had seen at Rome; but as there is one in the hand of a very ancient statue of Isis which Doctor Pococke brought into England from Egypt, it puts that point of musical history out of all dispute. The *Sistrum* appears in the *Isiac Table*; and Apuleius makes an old Greek invoke an Egyptian priest “by the stars in the firmament; by the infernal divinities; by the elements which compose the universe; by the silence of the night; by the sanctuary in the temple of Coptos; by the increase of the Nile; by the mysteries of Memphis; and by the *Sistrum* of Pharos.” By *Pharos*, an Egyptian island, was here figuratively meant, all Egypt.

14. A *Lyre* richly ornamented: it is placed on the stump of a tree, by the side of an antique statue of Apollo, formerly in the Salviati collection at Rome, but now in the possession of General Valmoden, in Germany. The Apollo leans on the *Lyre*.

P L A T E VI.

No. 1. The head of a *Tibicen*, or *Flute-player*, to shew the *φορσεα*, *Capistrum*, or *Bandage*, used for the purpose of augmenting the force of the wind, and for preventing the swelling of the cheeks of the performer. See p. 278. These Flutes are equal in diameter and length, and as no holes are visible in them, they must have been of the Trumpet kind. The drawing of this number was made from a vase in Sir William Hamilton's collection of Etruscan antiquities, Vol. I. Pl. 124.

2. A *double Flute*, of an uncommon kind, on a *Bas-relief* in the *Farnese* collection at Rome. These tubes of different lengths and keys or stoppels, are blown at once by a female bacchanal. Vossius, *De Poemat. Cant.* p. 110. says from Proclus, that every hole of the ancient Flute furnished at least three different sounds, and if the *παρατρύπηματα*, or holes, were opened, still more than three. Arcadius Grammaticus says, that the inventors of the holes of the Flute contrived a method of stopping and opening them at pleasure, by certain horns, or pegs, which, by turning them in and out, and moving them up and down, multiplied sounds, according to Vossius, like different strings upon a *Lyre*. But that could not be the case in this instrument, at least, during performance, as most of the plugs or stopples were out of the reach of the musician's hand; besides, the hands were employed in supporting the instrument; and though, in our Bassoon, and even Hautbois and German Flute, we are able, by means of keys, to open and close holes which the fingers cannot reach, yet, as no such expedients appear in the representations of ancient wind instruments, it is difficult to assign any other use to these plugs or stopples than that already mentioned, of adjusting the scale to some particular mode or genus before performance, as our Trumpets and Horns are tuned to keys of different pitch by means of *crooks*, and our Flutes by *middle pieces* of different lengths. It seems as if the longest of the two tubes in this number had a Horn joined to the end of it, which gives it the form of a *Lituus*. Bartholinus, *De Tib. Vet.* makes this curvature at the end the characteristic of the Phrygian Flute. P. 48, he gives two Flutes of this kind, with plugs; one strait and the other curved, and tells us from Aristotle that *loudness* and *clearness* were acquired by the addition of the Horn: *Cornua resonando instrumentorum sonos reddunt clariiores*. It is most likely too that it rendered the tube to which it was added an octave lower than the other.

3, and 4, are both taken from the beautiful Sarcophagus in the *Campidoglio*, or Capitoline Museum, at Rome, where each of them is placed in the hand of a Muse. It is necessary, however, to inform the reader that, by a mistake, they are engraved in this plate with the wrong end uppermost. The three rows of holes in No. 4, it is probable, were for the three *Genera*, or, at least, for three different modes, which both Pausanias and Athenæus tell us Pronomus first contrived to express by one and the same Flute. See p. 64. This instrument has a mouth-piece with a Fipple like our common Flute, which seldom appears in representations of ancient instruments.

5. *Tibia Utricularis*, or Bag-pipe, taken from a bas-relief in the court of the *Santa Croce* palace at Rome. This instrument was not unknown to the Greeks, who called it *ασκανλος*. I saw the representation of one in marble, of ancient Greek sculpture, in the possession of Mr. Morrison at Rome. It is probable that the union of this instrument with the *Syrinx* suggested the first idea of an organ. According to Suetonius, when Nero heard of the revolt by which he lost his empire and life, he made a solemn vow, that if it

should please the Gods to extricate him from his present difficulties, he would perform in public——on the *Bagpipe*. *Suet. in Nerone*, 54.

6. The *Concha*, *Tromba Marina*, or Sea-Trumpet, sounded by a Triton on a frieze, likewise, in the court of the *Santa Croce* palace at Rome. *Athenæus*, lib. iii. p. 86. mentions a kind of shell, which was called *κρηνη*, the shell of the cryer or herald, perhaps, from its sonorous quality. It is translated *Buccina*, and *Casaubon* says it was the shell of the *Murex*.

7. A *Tambour de Basque*, *Tabret*, or *Timbrel*, from a picture of a *Baccante*, or female bacchanal, dug out of *Herculaneum*. This instrument is of very high antiquity, having been in use among the Hebrews, Greeks, and Romans. To the rim were hung bells or pieces of metal.

8, and 9. *Tibiæ paræ*, or *equal Flutes*, placed in the hands of the young *Olympus*, who, in a picture likewise dug out of *Herculaneum*, is learning to play upon them of *Marsyas*. There are only two holes in each of these instruments; and in another antique picture upon the same subject, from the same place, each of the Flutes is represented with two *paxilli*, or *stopples*, instead of *foramina*, or holes.

10. An ancient instrument, as yet inedited, among the antiquities of *Herculaneum*; it is of a very peculiar kind, lately dug out of *Pompeii*, a city that was destroyed by an eruption of Mount *Vesuvius* at the same time as *Herculaneum*. It is a Trumpet or large tube of bronze, surrounded by seven small pipes of bone or ivory, inserted in as many of metal. These seem all to terminate in one point, and to have been blown through one mouth-piece. The small pipes are all of the same length and diameter, and were probably unisons to each other, and octaves to the great one. There is a ring to fasten a chain to, by which it was slung over the shoulder of the performer, which chain is likewise preserved. The instrument was found in the *Corps de Garde* of this subterraneous city, and seems to have been the true military *Clangor Tubarum*.

FIG. VII.

This is not a plate, but a wooden cut, of the exact size of the Egyptian musical instrument of two strings represented on the broken obelisk in the *Campus Martius* at Rome; to face p. 205. which see, for the description.

PLATE VIII.

The *Theban Harp*, to face p. 222*. where it is already described.

FIG. IX.

Hebrew Chants, to face p. 252.

END OF THE FIRST VOLUME.

P. 503, the Scale for the Theban Harp should follow the additional note to p. *226. P. 520, last period, r. statue.

DIRECTIONS to the BOOK-BINDER.

Plates IV. and V. being double, the Binder is desired to fold them in two, and fasten them by a Guard. There are likewise twenty-six double pages, marked with asterisks. These were occasioned by the late arrival of Mr. Bruce's communications, and by other additions to the text, occurring after the Press was broken up; and this method of inserting them was preferred to that of giving the reader the trouble of turning to a Supplement. As the sheets last printed will not be sufficiently dry to bear beating immediately, the purchasers of this Volume are entreated to let it remain sewed, or in boards, for a few months.

Burney, Charles, 1726-1814

A General History of Music from the earliest ages to the present periode ;
To which is prefixed, A Dissertation on the Music of the Ancients

Bd.: 1.

London 1776
